1. Introduction

Preface

Along higher quality building environment and more sophisticated building function, there is now a greater demand for system expansion for a flexible air-conditioning system capable of finer air-conditioning, thus increasing importance of individual air-conditioning systems. On the other hand, due to social significance of environmental and energy problems, elements such as energy-efficiency and low maintenance are still strongly desired.

Daikin is the sole air conditioning company in the world that manufactures every component from refrigerant to complete air conditioning systems itself. Our commitment to offering the best for people as well as the environment inspires us to develop new systems that make the most effective use of energy resources.
Daikin, the first in the industry to develop the VRV system, has now enhanced the R-410A, R-22 with the Inverter that features an upgraded capacity of up to 54 horsepower to further refine all the features of the current VRV system.

This publication contains a variety of information related to the design and installation of this new VRV System. We hope this information will serve to deepen your understanding of the system, and will help you to efficiently develop its highly evolved characteristics.

2. Publication History of VRV Engineering Data

Refrigerant	Type		Pub. : No.	Outdoor Units		Notes	Published In
R-410A	Air Cooled	■ INVERTER **M**	**ED39-436**	**50/60Hz H/P**	RXYMQ4, 5, 6M	**VRV II-S** Heat Pump ■ New line up of 4, 5, 6HP outdoor units ■ New line up of FXDQ Indoor units	Jul. 2004
			ED39-526	**50Hz H/R**	REYQ8M~48M	**VRV II** Heat Recovery Separation of Heat Recovery Series from ED39-226B	Feb. 2006
			ED35-511B	**50/60Hz H/P**	RXYQ8~30MY1K(E) RXYQ8~30MYLK(E)	**VRV II** Heat Pump for High outdoor temperature. ■ Minor change of Indoor Units from M to MA ■ Model change of Remote Controller as follows BRC1A61, 62 BRC8A61 →**BRC1C62**	Jul. 2006
		■ INVERTER **MA**	**ED39-428B**	**50/60Hz H/P** **50Hz C/O**	RXYQ5MA~48MA RXQ5MA~48MA	**VRV II** Heat Pump, Cooling Only ■ New line up of 60Hz Heat Pump outdoor units to ED39-428A	Oct. 2005
		■ INVERTER **P**	**ED34-762A**	**50Hz C/O**	Normal Series RXQ5P~54P High COP Series RXQ16PH~50PH	**VRV III** Cooling Only ■ Correction of errors	Sep. 2007
			ED34-845A	**50/60Hz H/P**	Normal Series RXYQ5P(A)~54P(A) High COP Series RXYQ16P(A)H~50P(A)H	**VRV III** Heat Pump ■ Change of refrigerant amount Refrigerant amount reduced to less than 12 kg.	Oct. 2008
			ED34-862	**50Hz C/O**	Normal Series RXQ5PA~54PA High COP Series RXQ16PAH~50PAH	**VRV III** Cooling Only ■ Change of refrigerant amount Refrigerant amount reduced to less than 12 kg.	Nov. 2008
	Water Cooled	■ INVERTER **M**	**ED30-442B**	**50Hz H/P** **50Hz H/R**	RWEYQ10, 20, 30M Y1	**VRV-W II** Heat Pump, Heat Recovery Following change has been newly added to ED30-442A ■ Minor change of Indoor Units from M to MA ■ Model change of Remote Controller as follows BRC1A61, 62 BRC8A61 →**BRC1C62**	May. 2006
			ED30-653A	**60Hz H/P** **60Hz H/R**	RWEYQ10, 20, 30M YL, TL	**VRV-W II** Heat Pump, Heat Recovery 60Hz ■ Correction of errors	Jan. 2008
		■ INVERTER **P**	**ED30-842**	**50/60Hz** **H/P, H/R**	RWEYQ-P Y1, YL, TL	**VRV-W III** Heat Pump, Heat Recovery Preliminary	Oct. 2008
R-22	Air Cooled	■ INVERTER **K-K**	**ED35-211A**	**50/60Hz** **50/60Hz**	RXY 16K-K~30K-K RX 16K-K~30K-K	Following change has been newly added to ED35-211 ■ FXD32~63M (Additional) ■ FXYB32~63K (Additional) ■ FXYA40~63K→FXA32~63L (Model Change) ■ DCS302B61→DCS302C61 (Model Change)	Sep. 2004
		■ INVERTER **M**	**ED38-225C**	**50/60Hz H/P** **50Hz C/O**	RXY5M~48M RX5M~48M	**VRV II** Heat Pump, Cooling Only Following change has been newly added to ED38-225B ■ FXD20~32P (Additional) ■ Model change of Remote Controller as follows BRC1A61, 62 BRC8A61 →**BRC1C62** ■ VAM150~2000FA→VAM150~2000GJ (Model change)	Jun. 2006
			ED38-329	**50/60Hz H/P** **50Hz C/O**	RXYM4, 5, 6M RXM4, 5, 6M	**VRV II-S** Heat Pump, Cooling Only ■ New line up of 4, 5, 6HP outdoor units ■ New line up of FXD Indoor units	Jan. 2004
		■ INVERTER **MA**	**ED38-825**	**50/60Hz H/P** **50Hz C/O**	RXY5MA~48MA RX5MA~48MA	**VRV II** Heat Pump, Cooling Only ■ Minor change of outdoor units from M to MA. ■ Addition of DCS303A61	Oct. 2008
For All Types			**OH 08-1**	For Indoor and Outdoor Units.		**Option Handbook**	Apr. 2008
HRV(VAM)		GJ	**ED71-613**	**50/60Hz**	VAM150~2000GJ	**HRV** ■ New line-up from FA to GJ Series	Feb. 2006
HRV(VKM)		GA(M)	**ED71-440A**	**50Hz**	VKM50~100GA(M) (R-410A)	**HRV** • With DX Coil (VKM-GA) • With DX Coil and Humidities (VKM-GAM)	Feb. 2007

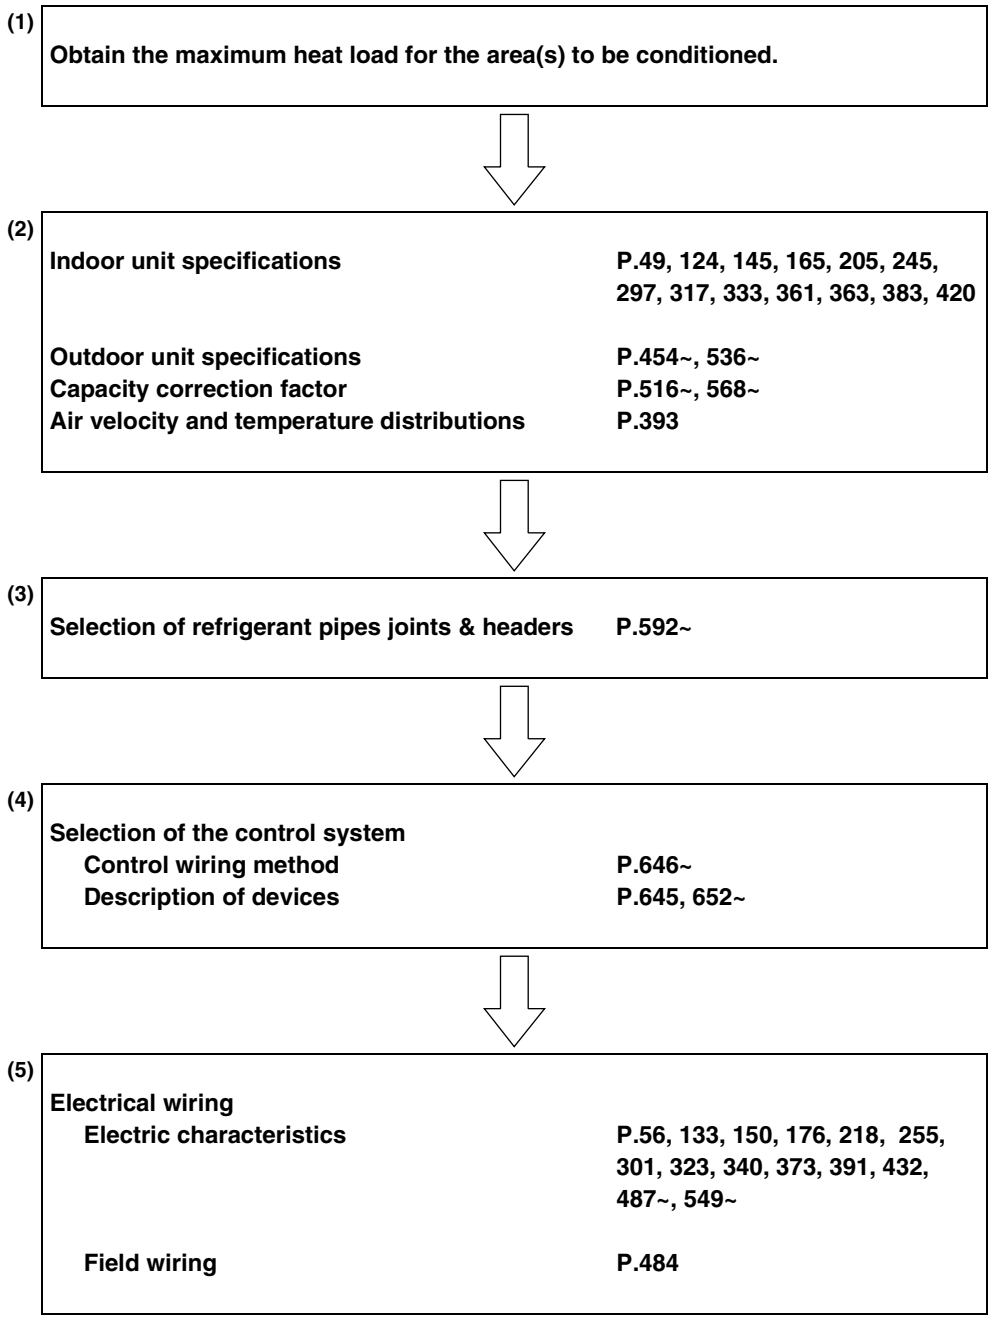

This time we publish **ED34-862** as shown by ▭ .

H/P : Heat Pump
H/R : Heat Recovery
C/O : Cooling Only

Note: The reference number "(V○○○○)" are noted on each figures in this book however they are only used for printing convenience.

3. Step by Step VRV System Selection Process (Reference)

Caution

1. Air conditioners should not be installed in areas where corrosive gases, such as acid gas or alkaline gas, are produced.
2. If the outdoor units is to be installed close to the sea shore, direct exposure to the sea breeze should be avoided.
3. Refer to the latest drawing numbers.

6. Features

6.1 Technologies

VRV III—Created to respond to the needs of large-sized buildings

Daikin's constant efforts have been devoted towards using the latest and most revolutionary technologies in the development of the VRVIII system for large-sized buildings. The system offers larger outdoor capacities, greater energy savings, easier installation, longer actual and total piping, and more.

1 Newly improved fans and grilles

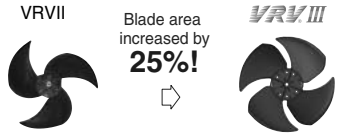

A higher external static pressure has been achieved—from 58. 8 Pa to 78.4 Pa—thanks to reduced internal pressure loss, use of the new fans and the new grilles.

New aero spiral fan and aero asymmetrical fan

The area of these new fan blades has been increased and optimised for each casing. This greatly reduces pressure loss, resulting in a higher external static pressure.

New aero asymmetrical fan

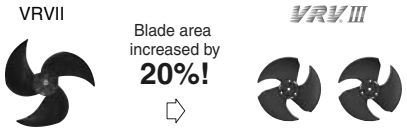

The three-bladed fan on the 10 HP unit, with a diameter of 700 mm, has been redesigned to include four blades and now has a diameter of 680 mm. Blade area has been increased by 25%.

Diameter of **700 mm** Diameter of **680 mm**

New aero spiral fan (Powerful Dual DC fan)

In the 14 and 16 HP unit, a single fan with a diameter of 700 mm has been split into two fans with diameters of 540 mm each. Blade area has been increased by 20% to increase airflow.

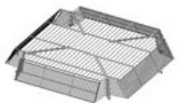

Diameter of **700 mm** Diameter of **540 mm x 2**

Aero smooth grille

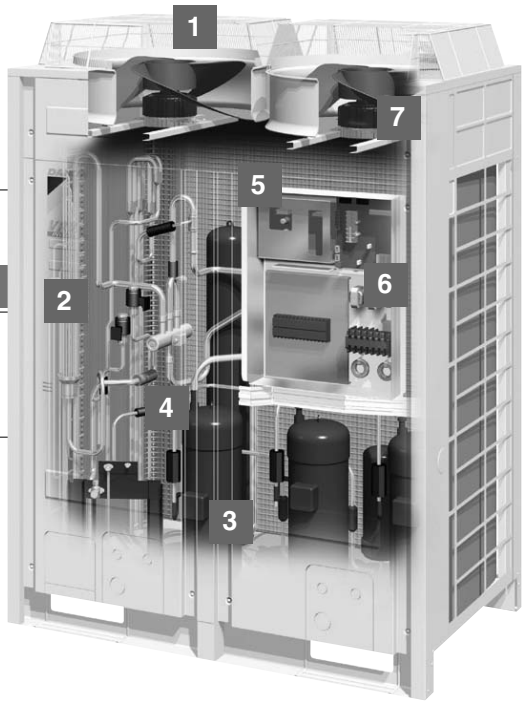

The three-dimensional, integrated, soft woven steel grilles are covered with a plastic coating that protects them from rotating elements and the possibility of fire damage.

Perspective view

2 Heat exchanger

The new heat exchanger contributes to a high COP because of an increase from 7% to 10% of the effective length as well as an optimised e-Pass heat exchanger.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

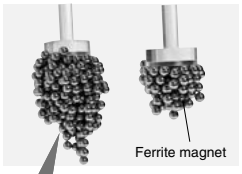

3 Improving the high efficiency compressor to achieve a high COP and larger capacity

Reluctance DC scroll compressor

Daikin's unique scroll compressor minimises heat loss, and is driven by a high efficiency motor to achieve significant energy savings.

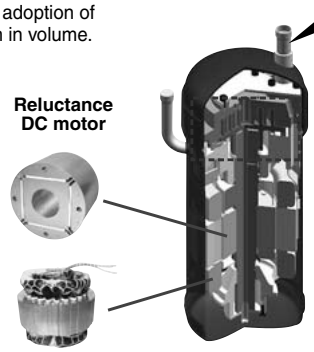

High torque and efficiency is attained with the adoption of neodymium magnets. Achieves 70% reduction in volume.

Secret to raising energy-efficiency!
Powerful magnets

Neodymium magnets are much more powerful than the widely used ferrite magnets.

Reluctance DC motor

High-performance, low-noise new scroll compressor operates at a faster rate. The speed increase has been achieved through advanced stress analysis for increased strength and utilisation of the advantages (oil film control) of the high thrust mechanism*.

***High thrust mechanism**
By introducing high pressure oil, the reactive force from the fixed scroll is added to the internal force, thereby reducing thrust losses. This results in improved efficiency and suppressed sound levels.

4 Heat transfer circuit

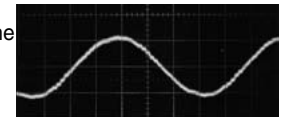

By performing super cooling before the expansion process, the volume of refrigerant that needs to be circulated to the indoor units can be reduced without lowering the evaporation temperature. This permits the use of narrower piping.

5 Compact aero box

Realises a compact casing by stacking the Inverter and control PCBs plus optimising the internal design to suit airflow speed. This achieves lower noise and reduces the power required by the large-diameter fanned outdoor unit.

6 Smooth sine wave DC Inverter

By adoption of the Sine Wave, which smoothes the rotation of the motor, operation efficiency is improved sharply.

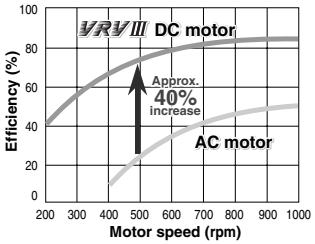

7 DC fan motor

- Across entire range of models (from 5 to 54 HP).
- Efficiency improvement by approximately 40% especially at low speed.

DC fan motor structure

DC motor efficiency
(comparison with a conventional AC motor)

Note: Data are based on studies conducted under controlled conditions at a Daikin laboratory.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

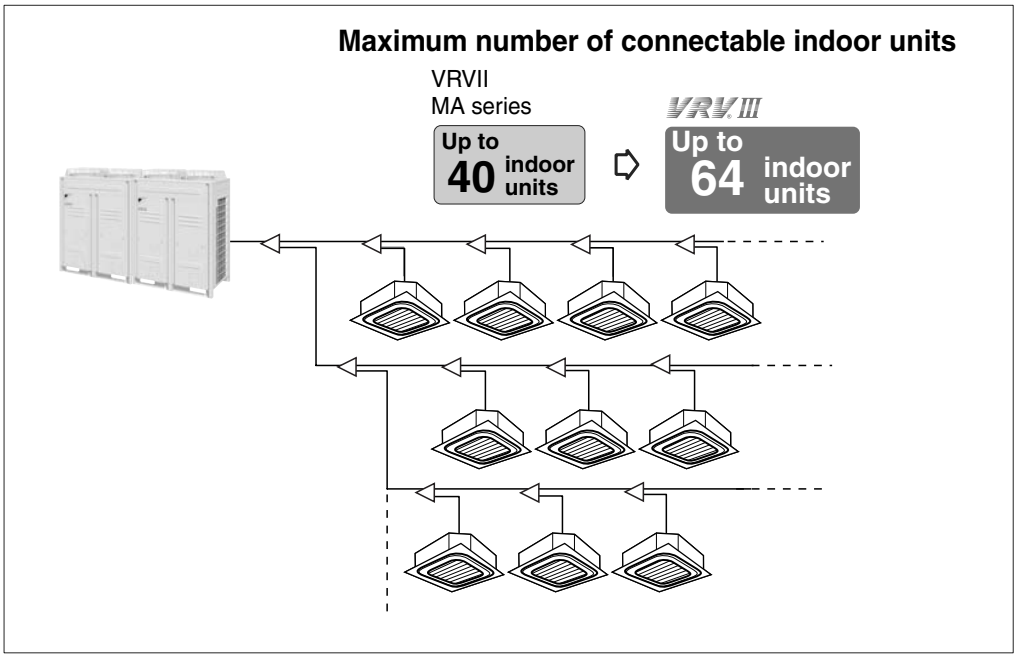

6.2 Flexible Design

Large capacities for large-sized buildings

An increased number of connectable indoor units

The number of connectable indoor units has been drastically increased from 40 to 64!

Increased indoor unit connections

Refer to page 11 for the maximum number of connectable indoor units.

Combination ratio

Connection capacity at maximum is 200%.

Connection capacity
50%–200%

Conditions of indoor unit connection capacity

Applicable indoor units	 FXDQ, FXSQ, FXAQ models	Other indoor unit models*
Single outdoor units	200%	200%
Double outdoor units		160%
Triple outdoor units		130%

* For the FXFQ25 models, maximum connection ratio is 130% for the entire range of outdoor units.

Note: • If the operational capacity of indoor units is more than 130%, low airflow operation is enforced in all the indoor units.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Large capacities for large-sized buildings

Extended long piping length

Piping length is drastically extended! The long piping length provides more design flexibility, which can match even large-sized buildings.

Max. actual piping length

VRVII MA series: 150 m ⇨ VRV III: 165 m

Max. equivalent piping length

VRVII MA series: 175 m ⇨ VRV III: 190 m

Max. total piping length

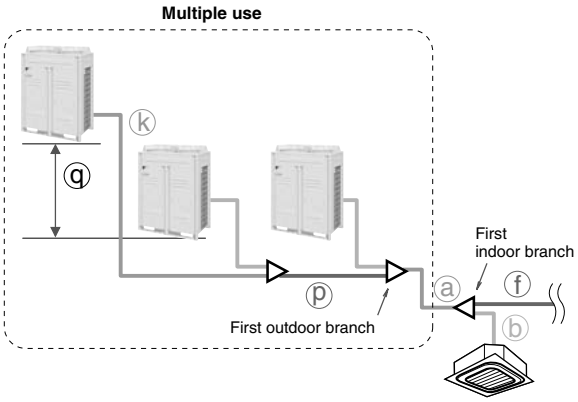

VRVII MA series: 510 m ⇨ VRV III: 1000 m

Max. level difference between the outdoor units and the indoor units

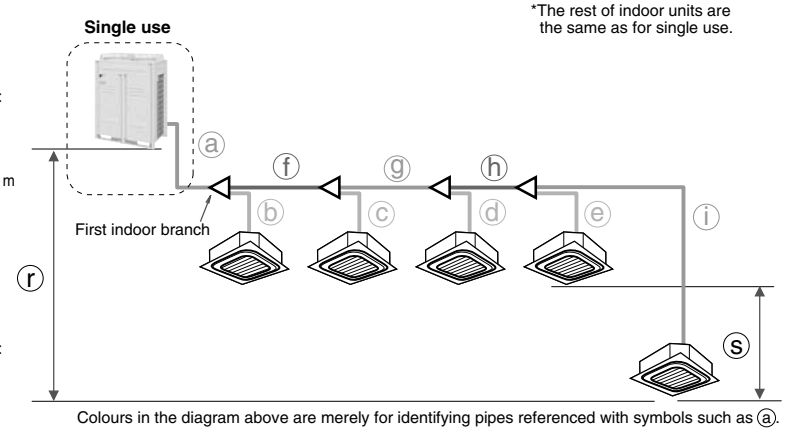

VRVII MA series
- Outdoor unit above indoor unit: 50 m
- Outdoor unit below indoor unit: 40 m

VRV III
- RXQ8PA-54PA
  - Outdoor unit above indoor unit: 90 m ⋆2
  - Outdoor unit below indoor unit: 90 m
- RXQ5PA
  - Outdoor unit above indoor unit: 50 m
  - Outdoor unit below indoor unit: 40 m

⋆2. Level differences above 50 m are available on request.

*The rest of indoor units are the same as for single use.

Colours in the diagram above are merely for identifying pipes referenced with symbols such as ⓐ.

		Actual piping length	Example	Equivalent piping length
Maximum allowable piping length	Refrigerant piping length	**165** m or less	a+f+g+h+i	**190** m or less
	Total extension length	**1000** m or less	a+b+c+d+e+f+g+h+i	—
	Between the first indoor branch and the farthest indoor unit	**90** m or less⋆1	f+g+h+i	—
	Between the outdoor branch and the last outdoor unit	**10** m or less	k+p	**13** m or less

			Level Difference	Example	Outdoor Units
Maximum allowable level difference	Between the outdoor units (Multiple use)		**5** m or less	q	RXQ8PA-54PA
	Between the indoor units		**15** m or less	s	—
	Between the outdoor units and the indoor units	If the outdoor unit is above.	⋆2 Available on request **90** m or less	r	RXQ8PA-54PA
		If the outdoor unit is below.	**90** m or less	r	
		If the outdoor unit is above.	**50** m or less	r	RXQ5PA
		If the outdoor unit is below.	**40** m or less	r	

⋆1. No special requirements up to 40 m. The maximum actual piping length can be 90 m, or less depending on conditions. Various conditions and requirements have to be met to allow utilisation of 90 m piping length. Be sure to refer to the Engineering Data for details of these conditions and requirements.

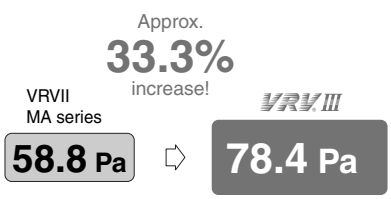

⋆2. Level differences above 50 m are not supported by default but are available on request for RXQ8PA-54PA. (If the outdoor unit is above the indoor unit.)

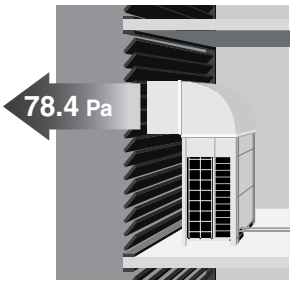

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Large capacities for large-sized buildings

High external static pressure 78.4 Pa (8 mm H_2O)

Higher external static pressure has been achieved thanks to the fan grilles and the dual DC fans that reduce internal pressure loss. Exceeding the previous 58.8 Pa (6 mm H_2O) level, Daikin now offers 78.4 Pa (8 mm H_2O) external static pressure by field setting to meet the requirements for installation on each floor, often requested for large-sized buildings.

Easier installation and maintenance

Automatic test operation

Simply press the test operation button and the unit performs an automatic system check, including wiring, shutoff valves, and sensors. The results are returned automatically after the check finishes.

Memory function for operational data

Operating data for the preceding 3 minutes is automatically stored in memory. Should a malfunction occur, this speeds up the process of identifying and fixing the cause of the problem. It also helps in developing measures to eliminate malfunctions.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

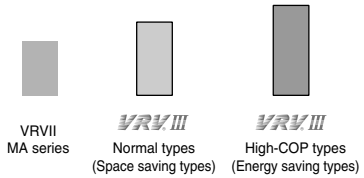

6.3 A sense of responsibility

High COPs

It has become essential for air conditioning manufacturers to develop systems that provide high energy savings. We at Daikin have made great efforts in this field, and the newly-developed VRVIII delivers highly efficient performance, contributing to high energy savings.

Achieving a high COP

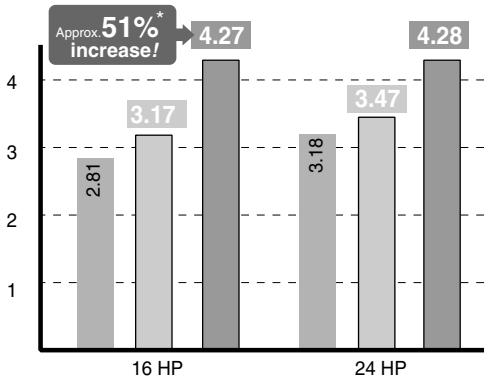

We have reached a new level of efficiency, thanks to the new advanced features such as the heat exchanger, the grille and the dual DC fans.

•Cooling operating conditions: Indoor temp. of 27˚CDB, 19.0˚CWB, and outdoor temp. of 35˚CDB.

Comparison of VRVII and VRVIII

(For cooling operation)

* Compared to VRV II MA series

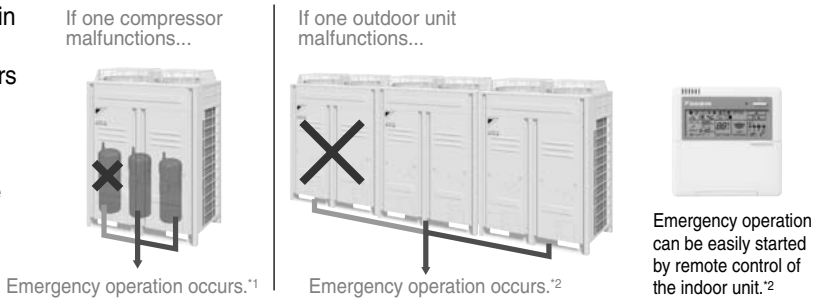

Compliant with the RoHS Directive*

We have been making efforts to facilitate the transition to using RoHS Directive*-compliant materials for system parts.

* RoHS Directive
The RoHS (Restriction of Hazardous Substances (in electrical and electronic equipment)) Directive is an environmental directive enacted to regulate the use of designated chemical substances (lead, cadmium, hexavalent chromium, mercury, polybrominated biphenyls and polybrominated diphenylether) in electrical equipment. All household products subject to this Directive and sold in Europe from July 1, 2006 are legally bound to comply with the RoHS Directive.

Double backup operation in compressors and units

- If one of the multiple compressors in a single outdoor unit system malfunctions, the other compressors take over emergency operation.*1
- If one of the unit in a multiple outdoor system malfunctions, the other outdoor units provide emergency operation*2 until repairs can be made.

*1. Possible only with single outdoor unit systems that are equipped with two or more compressors. Local setting of the outdoor unit is necessary.
*2. For systems composed of two or more outdoor units

Less chances of refrigerant leakage

Conventionally, shutoff valve connections are flanged or flared. In the VRVIII system, the connections for all outdoor units are brazed, meaning less chance of refrigerant leakage.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

6.4 Enhanced Comfort

Enhanced comfort

Outdoor units designed for low-sound operation

Outdoor units created with cutting-edge technologies provide quiet operation to increase users' comfort.

Efficient compressor

New high-performance, low-sound scroll compressor operates at a faster rate, reducing start-up time. This helps the unit to bring the room temperature up to the set level quickly.

Nighttime quiet operation function

Operation sound level selectable from 3 steps for the night mode

Mode 1. Automatic mode

Set on the outdoor PCB. Time of maximum temperature is memorised. The low operating mode will initiate 8 hours*1 after the peak temperature in the daytime, and normal operation will resume 10 hours*2 after that. The operation sound level for the night mode can be selected from 55 dB(A) (Step 1), 50 dB(A) (Step 2) and 45 dB(A) (Step 3).
(For a single outdoor unit.)

Mode 2. Manual mode

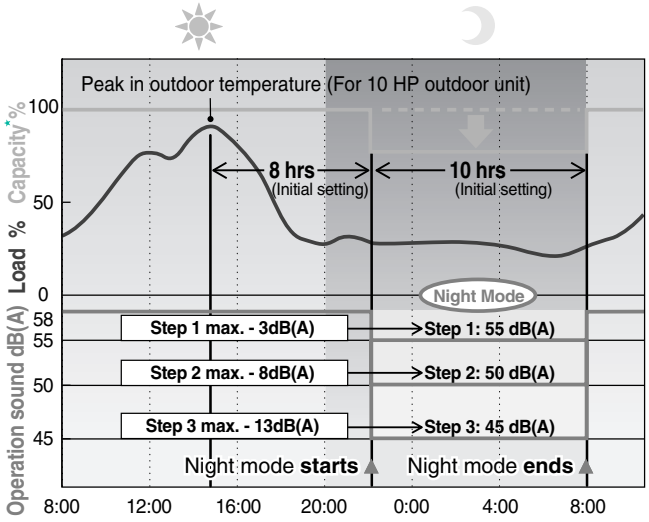

Starting time and ending time can be input.
(An external control adaptor for outdoor unit, DTA104A53/61/62, and a locally obtained timer are necessary.)

Mode 3. Combined mode

Combinations of modes 1 and 2 can be used depending on your needs.

*1. Initial setting. Can be selected from 6, 8 and 10 hours.
*2. Initial setting. Can be selected from 8, 9 and 10 hours.

Mode 1. Automatic mode

Notes: • This function is available in setting at site.
• The relationship of outdoor temperature (load) and time shown in the graph is just an example.

* The capacity reduction rate differs depending on the operation sound level step selected.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

6.5 Control Systems

Individual Control Systems

Wired remote controller (Option)

BRC1C62

- Easier to read because LCD screen is larger.
- Digital display lets you set temperature in 1˚C units.
- Lets you individually programme by timer the respective times for operation start and stop within a maximum of 72 hours.
- Equipped with a thermostat sensor in the remote controller that makes possible more comfortable room temperature control.
- Constantly monitors malfunctions in the system for a min. of 40 items, and is equipped with a "self-diagnosis function" that lets you know by message immediately when a malfunction occurs.
- Lets you carry out various field settings by remote controller.
- Enables you to select the ventilation mode and the volume of the HRV.
- The rubber switch and the oil-resisting resin casing have been adopted for durability.

* When the auto-swing function is not available, the message, THIS FUNCTION IS NOT AVAILABLE is displayed when the wind direction adjustment button is pressed.

Wired remote controller with weekly schedule timer (Option)

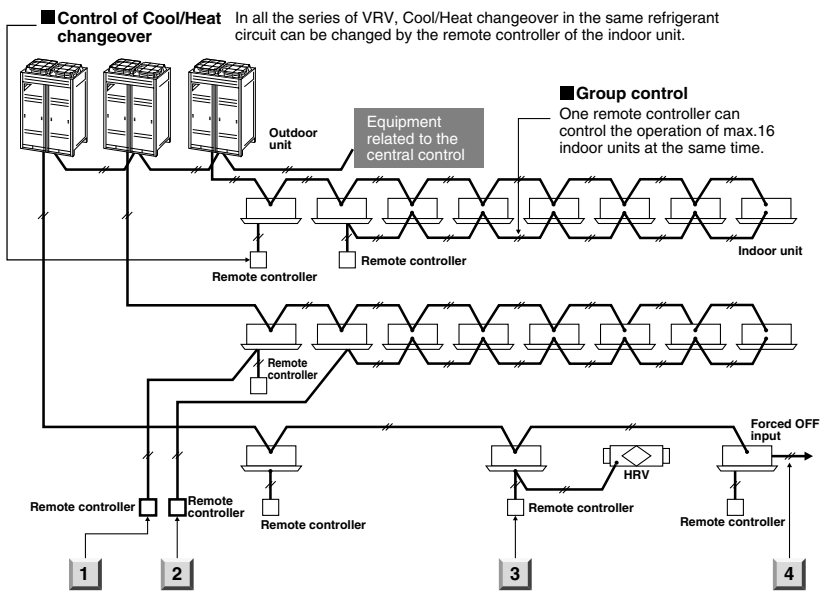

BRC1D61

Adds advanced functions to those of the above wired remote controller.

- Includes ventilation mode and airflow rate switching, the main functions of HRV series.
- 24-hour clock function (1-hour backup for power failures)
- Programming function for each day of week.
- Scheduling possible of start/stop and temperature limit (5 settings/day)
- Programming can be enabled or disabled.
- Copy function for programmed schedules.

Notes: 1. Standard remote controllers (BRC1C62) not required.
2. If the BRC1D61 is connected to the centralised remote controllers (DCS303A51, DCS302CA61, DCS301BA61, DST301BA61), the schedule function is not available.

The wired remote controller supports a wide range of control functions

1 Control by two remote controller

The indoor unit can be connected by the two remote controller, for example one in the room and the other one in the control room, which can control the operation of indoor unit freely. (The last command has a priority.) Of course, the group control by two remote controller is also possible.

2 Remote control

The wiring of remote controller can be extended to max. 500 m and it is possible to install the remote controllers for the different indoor units in one place.

3 Control for the combined operation

The operation of HRV can be controlled by the remote controller of the indoor unit. Of course, the remote controller can display the time to clean the filter.

4 Expansion of system control

The system can be expanded to add several controllers, such as BMS, Forced OFF input and etc.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Wireless remote controller (Option)

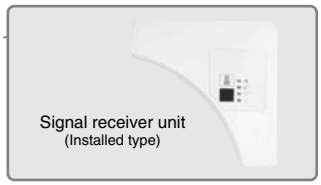

Wireless remote controller

Signal receiver unit
(Separate type)

- The same operation modes and settings as with wired remote controllers are possible.
- A compact signal receiver unit to be mounted into a wall or ceiling is included.
  - A light receiver unit for a Ceiling Mounted Cassette (Round Flow, Double Flow) type, Ceiling Suspended type and Wall Mounted type is mounted into the indoor unit.

Signal receiver unit can be installed on the panel
ex. Ceiling Mounted Cassette (Round Flow) type

Simple remote controller (Option)

Exposed type
(BRC2C51)

Concealed type
(For hotel use)
(BRC3A61)

- The remote controller has centralised its frequently used operation selectors and switches (on/off, operation mode, temperature setting and airflow volume), making itself suitable for use in hotel rooms or conference rooms.
- The exposed type remote controller is fitted with a thermostat sensor.

The concealed-type remote controller smartly fits into a night table or console panel in a hotel room.

6.6 Advanced Control Systems

intelligent touch Controller

Communication functions in the user-friendly icon-based multilingual controller simplify centralised control of the VRV system.

Function 1 **Support for centralised control from elsewhere using a PC with a Web browser** (Option)

Function 2 **Sending of e-mail alerts to a specified address when malfunctions occur** (Option)

Function 3 **Built-in modem for connecting to Air Conditioning Network Service System** (Option)

Function 4 **Doubling of number of connectable indoor units by adding a DIII-NET Plus Adaptor** (Option)

Function 5 **Management of facilities/equipment other than A/C units** (By adding Dio unit or Di unit)

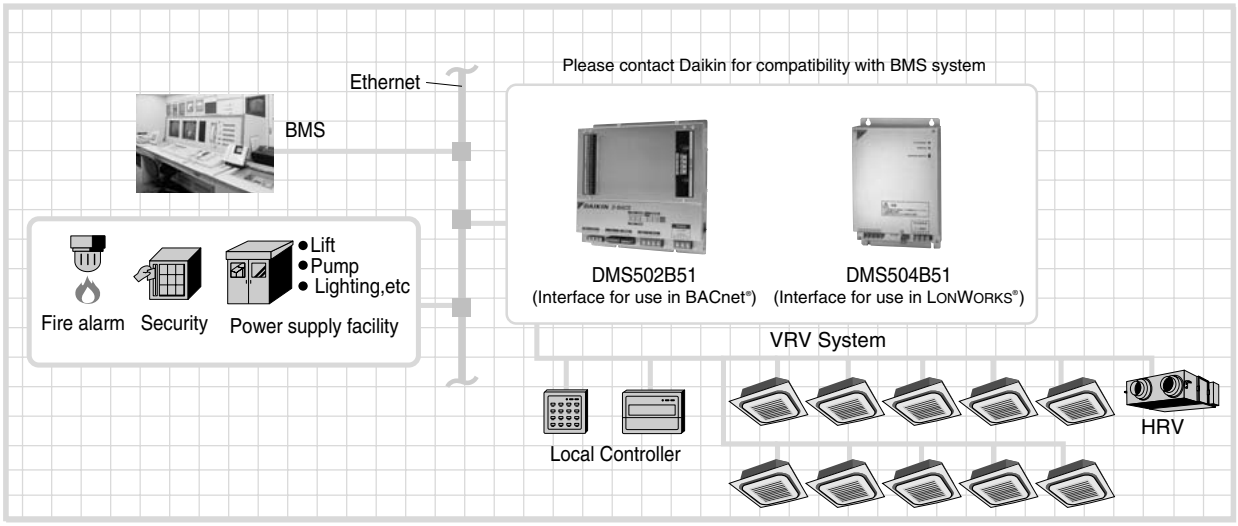

Function 6 **Simple Interlock Function**

- Colour LCD touch panel icon display
- Small manageable size
- Simplified engineering
- Multi language (English, French, Italian, German, Spanish and Chinese)
- Yearly schedule
- PPD (Power Proportinal Distribution function) (Option)
- Auto heat/cool change-over
- Temperature limitation
- Enhanced history function
- Air Conditioning Network Service System (Optional Maintenance Service)
- Simple Interlock Function

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Interface for BACnet® and LONWORKS®

Integrated control systems that recognise the trend of open control systems

■ Compatibility with BMS enhanced by utilising the international communication standards, BACnet® or LONWORKS®.

DMS502B51 Interface for use in BACnet®

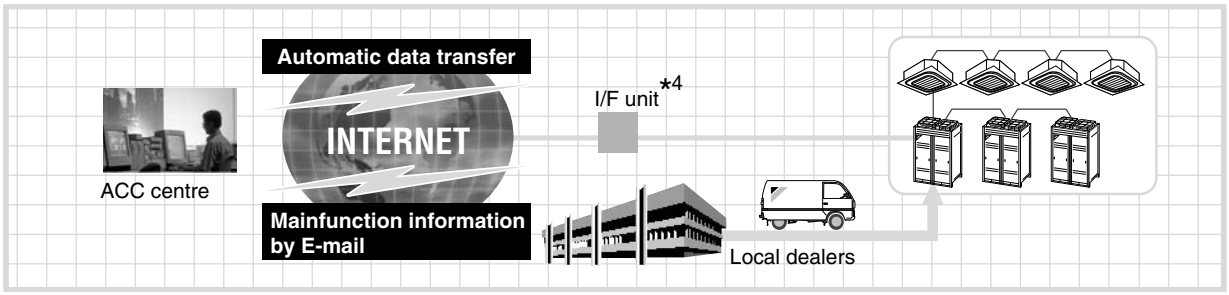

■ BTL Certification
■ PPD data (Optional Di board is required.)
■ ISO 16484-5 (Does not support IEEE 802.3 protocol for BACnet®)
■ Conformance class 3 (ASHRAE 135–1995)
■ Standard BACnet® Device B-ASC (ASHRAE 135–2001)
■ Up to 40 outdoor units and 256 indoor unit groups on one gateway. (Optional adaptor)

DMS504B51 Interface for use in LONWORKS®

■ XIF file for confirming of specifications of the units.
■ Connectable up to 10 outdoor units and 64 indoor unit groups.

Air Conditioning Network Service System

Maintenance services that boost profits and customer satisfaction

- 24 hour on-line diagnostic system
- Energy saving and extention of aircon operating life
- Maintenance management via A/C network service system reports
- Reliable service at shortest lead time

*1. Model name varies upon the system size.
*2. BACnet® is a registered trademark of American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE).
*3. LONWORKS® is a registered trade mark of Echelon Corporation.
*4. For an I/F unit, one of the following can be selected: ***Local Controller***, intelligent touch Controller, or intelligent Manager III.
*5. Ethernet is a registered trademark of Xerox Corporation.
*6. Refer to the Options page for the name of each model.

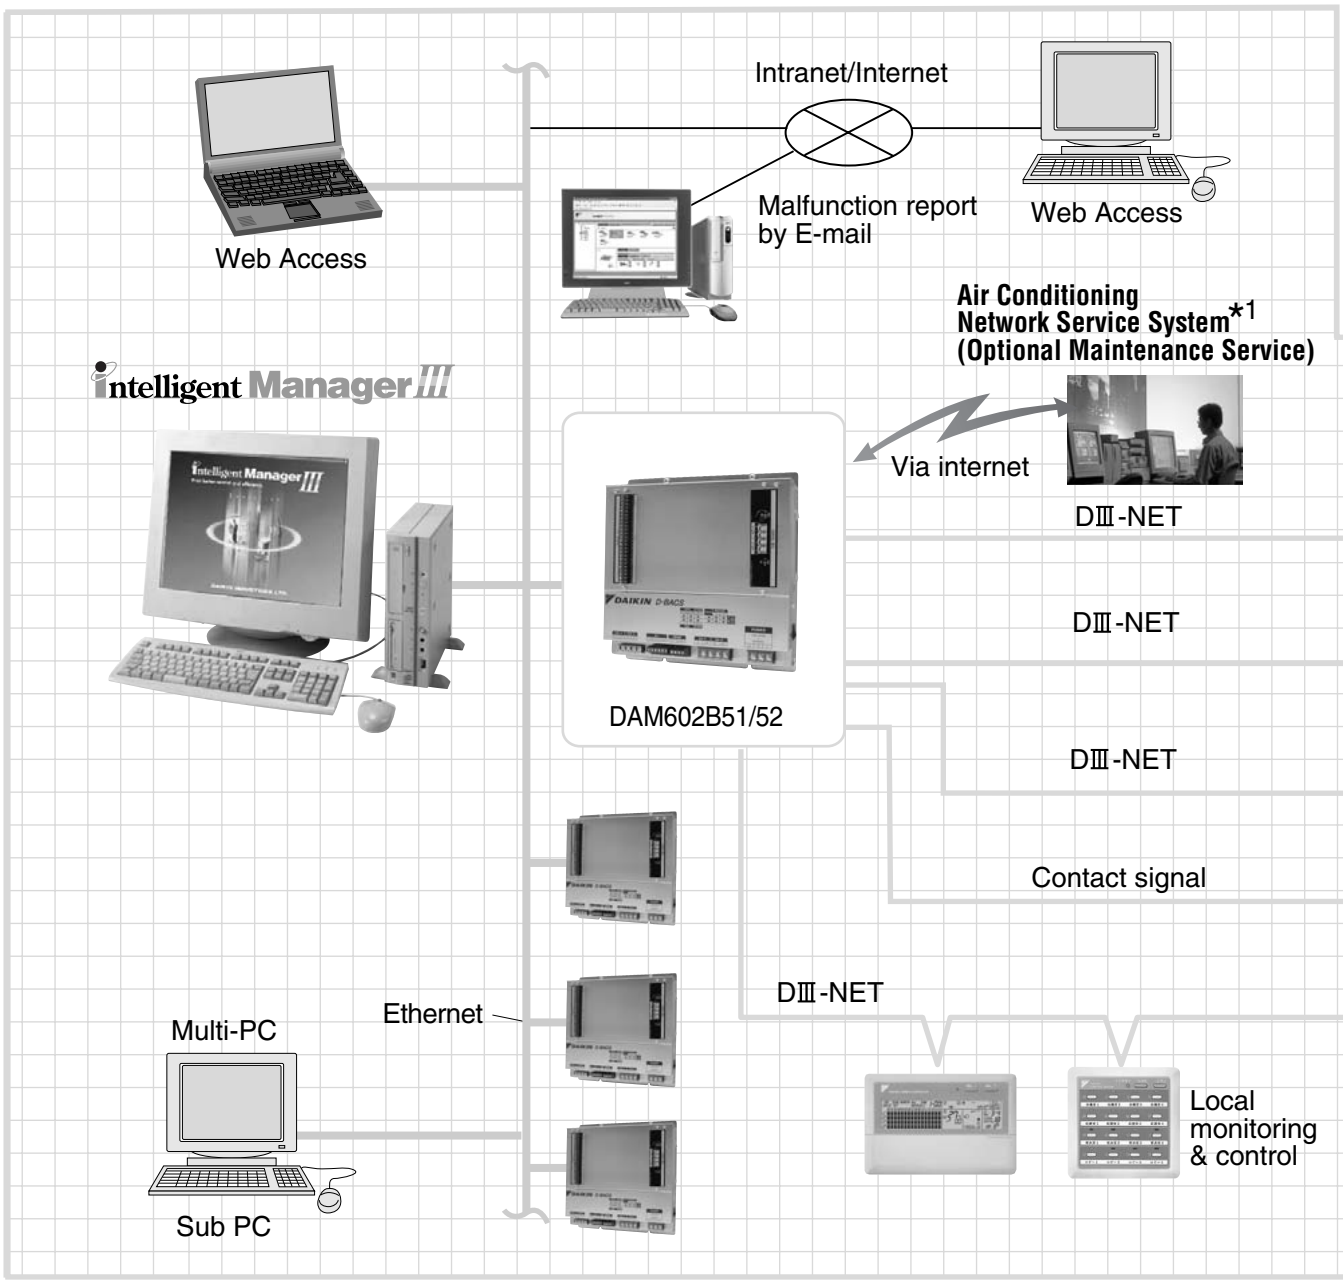

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

intelligent Manager III

Centralised control system for easy provision of effective control and monitoring of VRV system functions

New Features

- Monitor and control from the remote site by Web browser (Option)
- PPD data can be managed from the remote site by Web browser (Option)
- Send malfunction report through the Internet by E-mail (Option)
- Compliant with the RoHS Directive (DAM602B51/52)(refer to page 18 for details.)

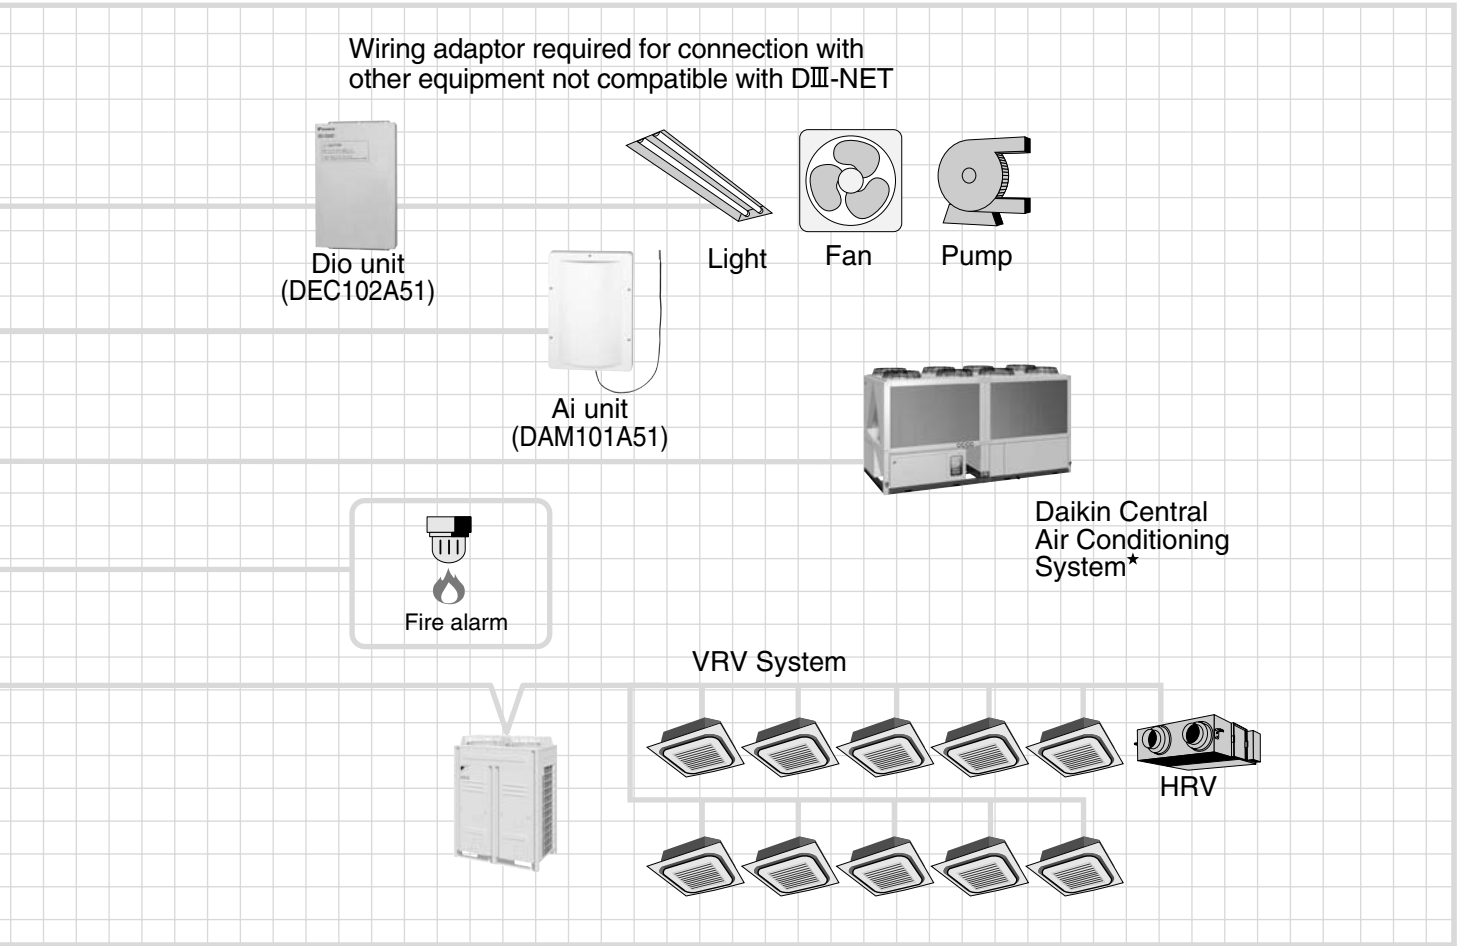

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Special Functions

- Features control and monitoring functions for central A/C products and an Air Conditioning Network Service function.
- Using an external contact via DIII-NET, monitors and controls equipment such as lighting, fans, or building security systems.

- Floor visual navigation
- Graphical report
- Multi-PC access
- Analogue interlock
- Automatic heat/cool change-over
- Temperature limitation
- Sliding temperature <Optional (DAM101A51) unit required>
- Energy saving function (ECONO mode) (Option)
- Air Conditioning Network Service System (Optional Maintenance Service)

*1. There are restrictions in applicable areas and release times, therefore please consult us separately for details.
★Interfacing requirements vary depending on model, and some systems may not be suitable. Please contact your distributor for details.
• Information on these systems is preliminary only. Please contact Daikin for formal information on the products.

6.7 HRV (Heat Reclaim Ventilation)

6.7.1 Product Introduction

Background

To maintain the comfortable environment in a building, the fresh air intake is essential the same as an appropriate room temperature control.

The heating / cooling efficiency of conventional standard ventilating systems drops during cooling / heating operation and it is waste of energy.

The Heat Reclaim Ventilation was developed to solve those problems.

What is HRV (Heat Reclaim Ventilation) ?

HRV is a system which recovers the thermal energy of exhaust air and reuses it for heating or cooling of supply air. It exchanges heat between the exhaust and the supply air.

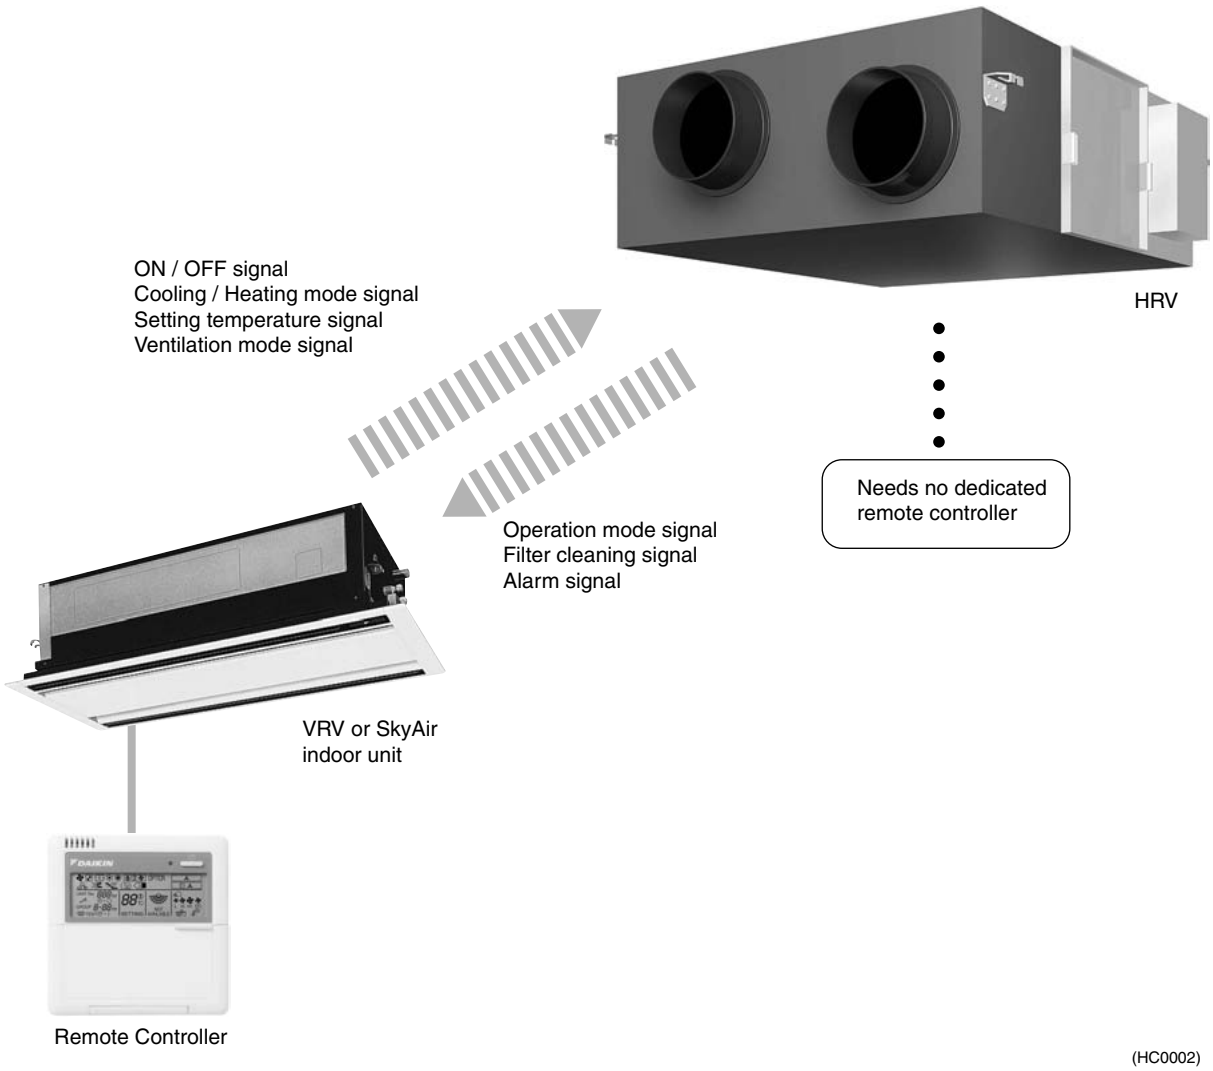

Daikin's HRV

Daikin's HRV greatly reduces the total power consumption by operation interlocked with air conditioner such as VRV or SkyAir.

The total heat exchange mode and the ventilation mode can be automatically selected by setting to the automatic ventilation mode.

Main Features

1. The operation is available when the outdoor air temperature is down to –15°C.
2. Interlocked operation with VRV (SkyAir)
3. Automatic ventilation mode changeover
4. Energy Saving
5. FRESH-UP operation
6. Quiet operation
7. Easy installation
8. Easy maintenance
9. Wide variety of optional accessories

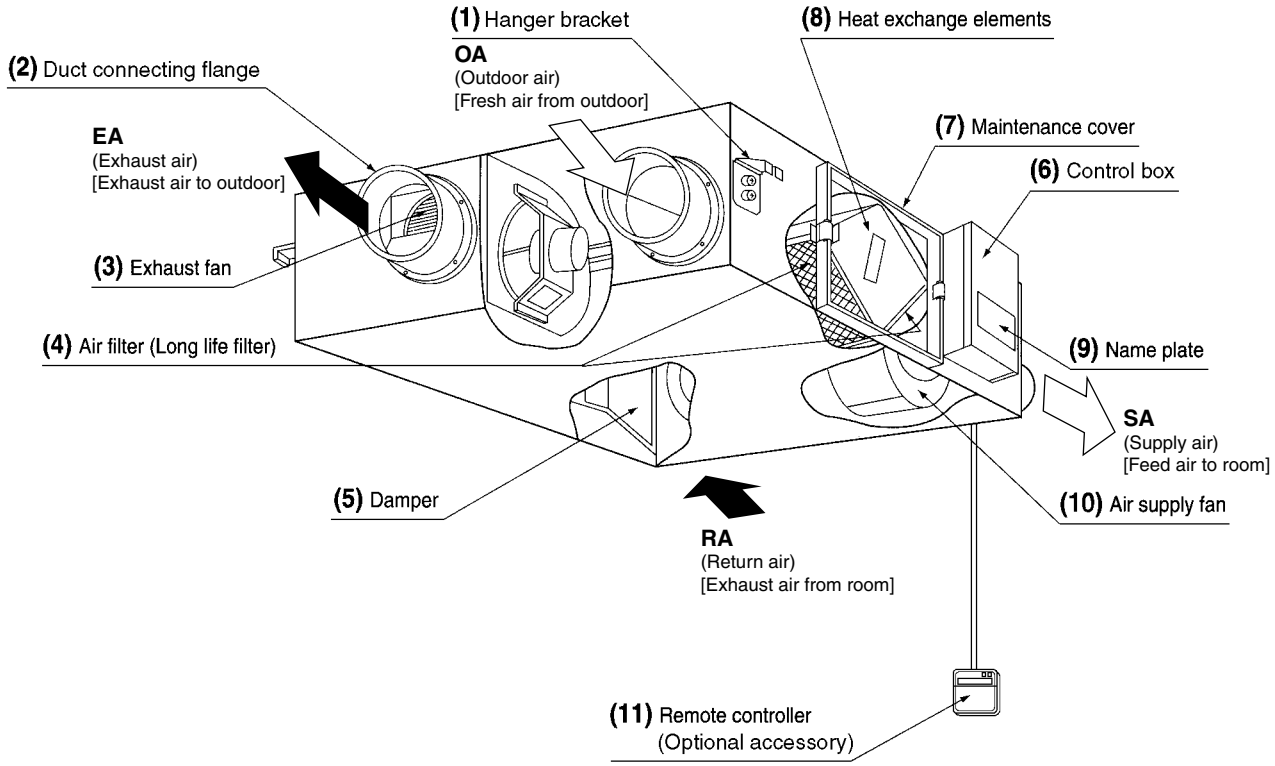

(HC0002)

6.7.3 Features

Interlocked Operation with VRV (SkyAir)

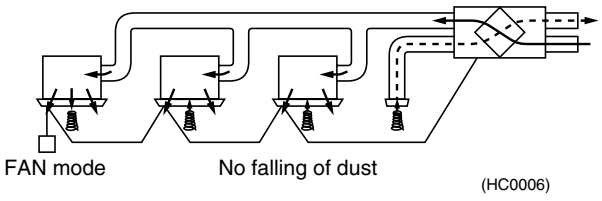

1. Simultaneous ON / OFF with the indoor unit by the indoor unit remote controller.
2. HRV independent operation during air conditioning off season by the indoor unit remote controller.
3. Automatic ventilation mode changeover: Auto / Heat Recovery / Bypass
4. Fan speed changeover by the indoor unit remote controller : High / Low (Ultra-High / High, Ultra-High / Low)
5. Precooling / heating control function setting to delay the start of ventilation during air conditioner start-up to realize the high energy saving efficiency.
6. FRESH-UP operation setting
7. Filter sign display notifies the time for cleaning the filter.
8. No need to purchase or install the HRV exclusive remote controller
9. Advantage to IAQ (Internal Air Quality)

Note:

5,6 can be set at the initial setting only.

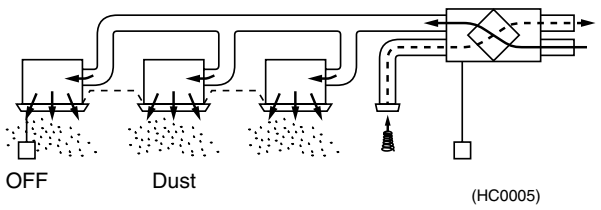

Type	Interlocked operation with air conditioner	HRV independent operation
Structure		
Features	■ Simultaneous operation by air conditioner's remote controller is available.	■ Operation / Stop ■ Ventilation mode changeover ■ Fresh-up changeover ■ Timer mode start / stop ■ Malfunction digital display
Connectable Indoor unit	VRV (all indoor unit), SkyAir	

Daikin's HRV

Dust does not fall off from the air filter because the air supply fan of the interlocked indoor unit remains activated even when the HRV is operated independently.

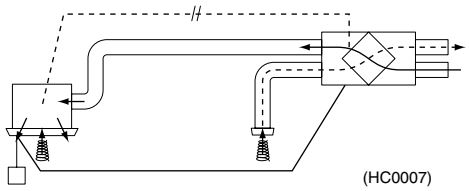

Other types

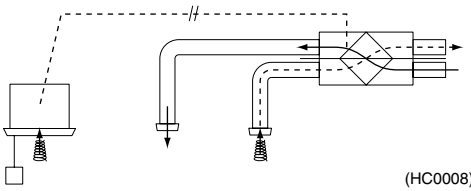

If conventional HRV, with exclusive remote controller, is directly connected to indoor unit of air conditioner, dust may fall off from air filter when air conditioner is OFF.

Installation Examples

Direct duct connection system

Independent duct system

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

1

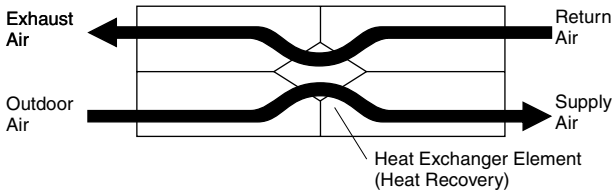

Energy Saving

By heat recovery operation

Approx. **20%** reduction of heating / cooling load

+

HRV unit recovers the thermal energy during cooling / heating operation of air conditioner. HRV reduces the cooling / heating load drastically and enhances the heating / cooling efficiency.

By setting to automatic ventilation mode

Approx. **8%** reduction of heating / cooling load

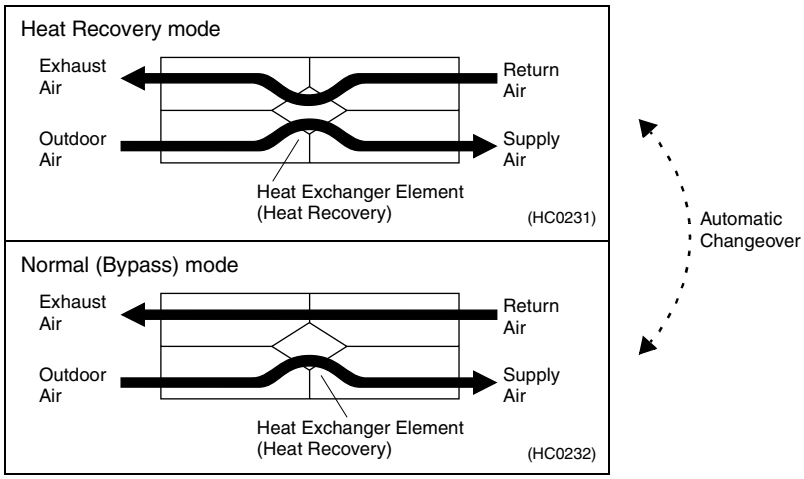

+

Proper use of Heat recovery ventilation and normal ventilation saves energy.
When the cooling operation is required in winter, use of heat recovery ventilation is not efficient because the outdoor air temperature is normally lower than that of the indoor. Thus, the proper use of ventilation mode enhances the heating / cooling efficiency.

Automatic Ventilation mode changeover

Operation	Sensor of ventilation	Decision of mode (Which is more energy efficient?)
	Difference between indoor / outdoor temp.	
Cooling	Indoor temp. > Outdoor temp. Indoor temp. < Outdoor temp.	Normal ventilation (Bypass) Heat recovery ventilation
Heating	Indoor temp. > Outdoor temp. Indoor temp. < Outdoor temp.	Heat recovery ventilation Normal ventilation (Bypass)

Refer to the CONTROL for the mode changeover.

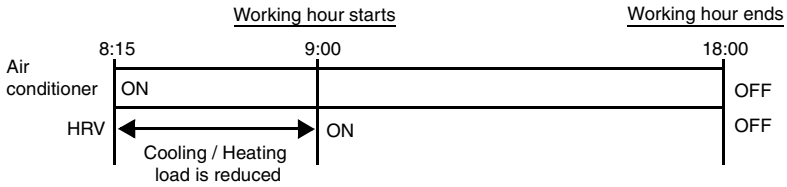

By Precooling / heating operation

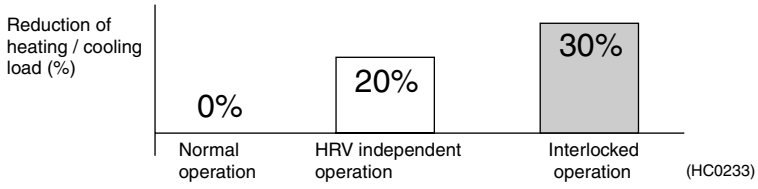

Approx. **2%** reduction of heating / cooling load

=

The load is reduced at startup of the air conditioner by the following control.
Before the working hour, the room air is clean.
Therefore, the startup of HRV can be delayed.

Total 30% reduction of heating / cooling load

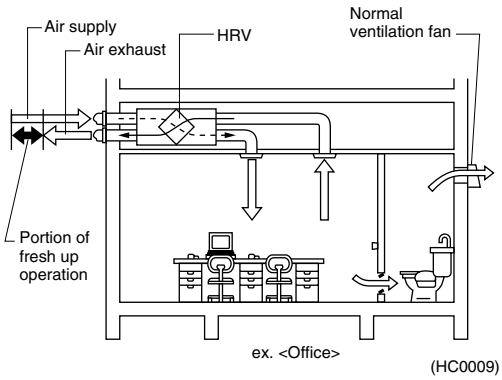

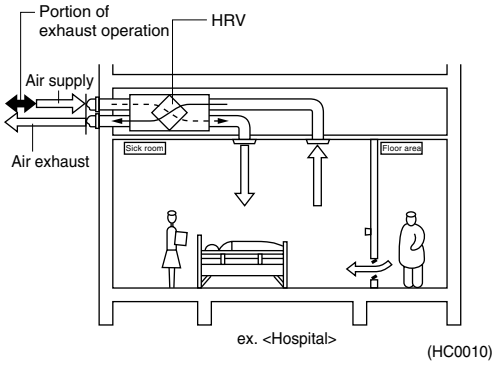

Note:
The total heating / cooling load may vary depending on the climate or the other environmental conditions.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

FRESH-UP Operation

Both the excessive supply mode and the excessive exhaust mode are selectable.
This function creates a more comfortable air environment.

	Supply Fresh-up (Excessive outdoor air supply)	Exhaust Fresh-up (Excessive exhaust air supply)
Detail	Supply air volume can be set at a higher level than the exhaust air by the remote controller.	Exhaust air volume can be set at a higher level than the supply air by the remote controller.
Major effects	■ Prevents inflow of toilet odor ■ Prevents inflow of outdoor air in winter	■ Prevents outflow of airborne bacteria from rooms in a hospital ■ Prevents outflow of odors from rooms in a nursing home
Application	Offices, etc.	Hospitals, Nursing homes, etc.
Example		

Nighttime free cooling operation
〈AUTOMATIC HEAT PORGE FUNCTION AT NIGHT〉

The nighttime free cooling is an energy-conserving function which works at night when the air conditioners is off, reducing the cooling load in the morning when the air conditioner is turned on by ventilating rooms which contain office equipment which raises the room temperature.

- Nighttime free cooling only works during cooling and when connected to Building Multi or VRV systems.
- Nighttime free cooling is set to “off” in the factory settings; so request your dealer to turn it on if you intend to use it.

Operation image

(a) Outside temperature
(b) Indoor temperature
(c) Set temperature
(d) Operating state of Air conditioner
(e) Operating state of Total heat exchanger

■ **EXPLANATION OF NIGHTTIME FREE COOLING OPERATION IMAGE**

The unit compares the indoor and outdoor temperatures after the air conditioning operation stops for the night. If the following conditions are satisfied, the operation starts, and when the indoor temperature reaches the air conditioning setting, the operation stops.

<Conditions>

1. the indoor temperature is higher than the air conditioning setting and
2. the outdoor temperature is lower than the indoor temperature,

If the above conditions are not satisfied, revaluation is made every 60 minutes.

NOTE

- The nighttime free cooling operation works when the HRV unit is off. Therefore, it is not possible to stop the nighttime free cooling operation, though the forced off is input from the optional controllers for centralized control.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Element (HEP element) Material

Material

The partition sheet in the heat exchanger element has been significantly upgraded. It is approximately two-third thinner than the conventional type, resulting in a great improvement in moisture absorption!
The material is flame-retardant for safety.
The fungi proof design also keeps the air clean.

Structure

The heat exchanger element is designed without moving parts for higher durability and reliability.
The supply air passage and the exhaust air passage are arranged in right angle to prevent the supply and exhaust air from getting mixed.

(HC0013)

Features

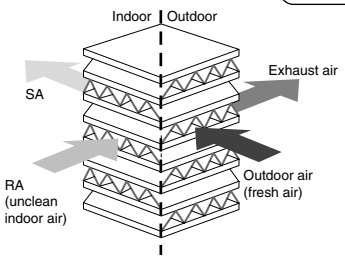

- High air shielding
  Even in the conventional less humidity conditions, maintaining the features of the material that can get excellent moisture permeability, we have achieved high air shielding, by special processing in the step of milling paper.

New ultra-thin film element

Conventional element

Moisture absorption is less effective due to the thickness of the partition sheets. It also limits the effective area that supply and exhaust air can be exposed to.

Thickness of the partition sheet
60 µm

New ultra-thin film element

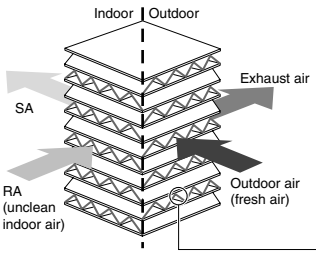

Newly developed!

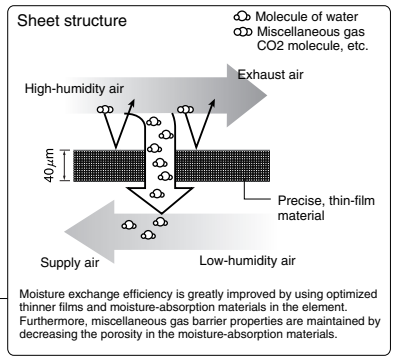

Due to the thinner film…

- Decreases the moisture resistance of the partition sheets drastically.
- Realizes more space for extra layers in the element, resulting in increased effective area that supply and exhaust air can be exposed to.

Moisture absorption increased by approx. 10%!

Thickness of the partition sheet
40 µm

Moisture exchange efficiency is greatly improved by using optimized thinner films and moisture-absorption materials in the element. Furthermore, miscellaneous gas barrier properties are maintained by decreasing the porosity in the moisture-absorption materials.

Easy installation and service maintenance

Downsized

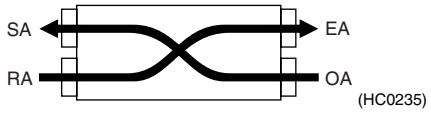

Model name	Height (mm)
VAM150GJVE	278
VAM250GJVE	278
VAM350GJVE	306
VAM500GJVE	306
VAM650GJVE	338
VAM800GJVE	387
VAM1000GJVE	387
VAM1500GJVE	785
VAM2000GJVE	785

Parallel air flow system (Daikin)

This system prevents misconnection and simplifies the installation work

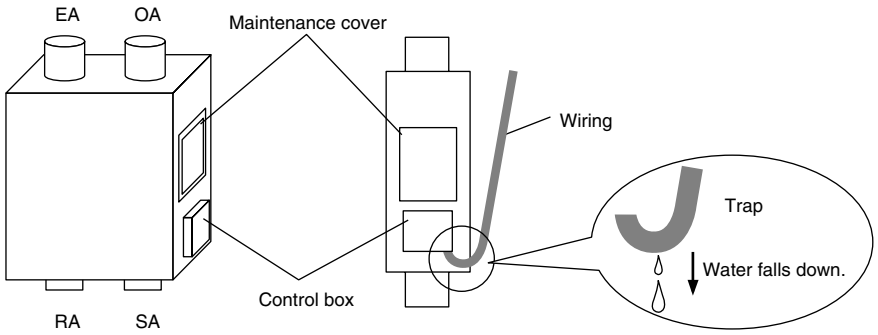

Cross air flow system

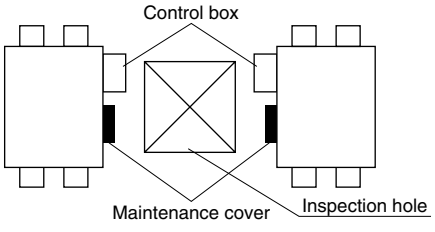

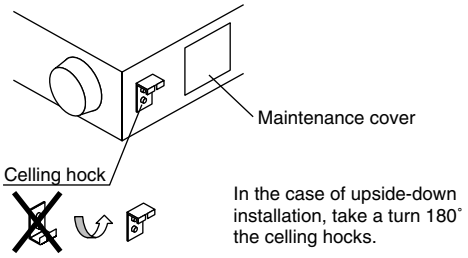

Service Maintenance

Vertical installation is available.
The unit must be installed with the side of RA, SA down.
It is necessary to make a trap.
Because the trap of wiring can protect against ingress of water.

Upside-down installation is available.
It allows the common use of the inspection hole and reduces the space and installation work.
For 2 units closely installed, only one inspection hole of 450 × 450 mm will do for maintenance or replacement of the heat exchanger element, etc.
Long life filter is equipped.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

The operation is available when the outdoor air temperature is down to -15°C

(Operation when the outdoor air temperature becomes lower than -10°C)

When the outdoor air suction temperature becomes lower than -10°C, the unit is changed to intermittent operation to prevent freezing of the heat exchanger element and dew condensation within the unit.

Intermittent operation

The outdoor air thermistor (standard equipment) within the unit detects the temperature. According to the detected temperature, the following operation determines.

<Step 1>

- The air supply fan is changed to intermittent operation, when the temperature is lower than -10°C.
- The intermittent operation of the air supply fan is changed to an operation of each cycle for 45 minutes' operation after stopping operation for 15 minutes.
- The exhaust fan operates continuously according to setup.

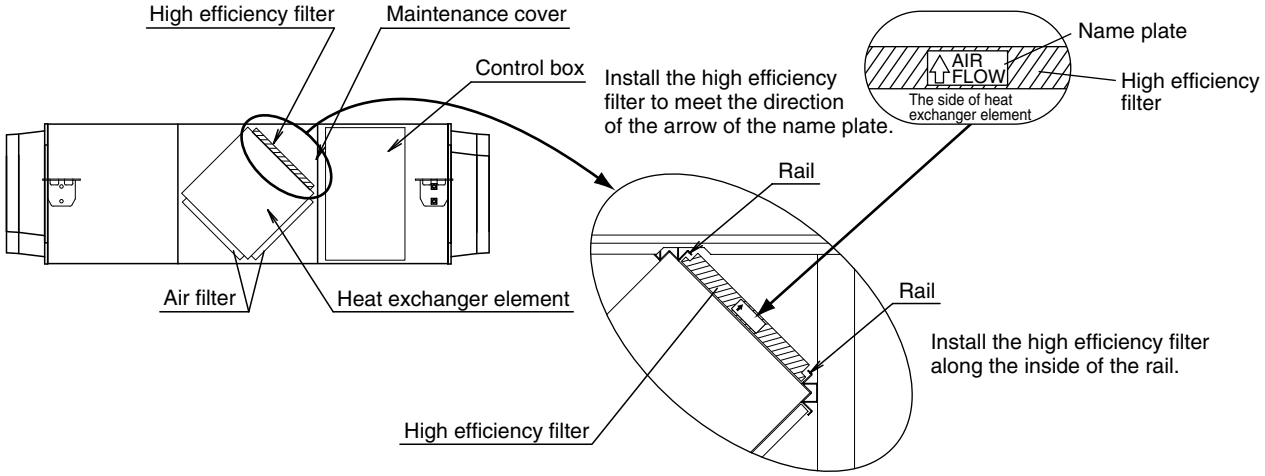

<Step 2>

- When the temperature becomes lower than -15°C, the unit stops operation to prevent any defect, such as dew condensation and freezing. The unit does not ventilate.
  But, to detect the elevation of the outdoor air temperature, the unit operates for 5 minutes per hour.
- The control by the external damper (local purchase) is available.
  When the unit is not operating, the unit prevents the cool outdoor air from invading.
  The power is applied from the connector X15A to the external damper. Therefore, the operation of the unit is controlled in conjunction with the external damper.

Note:

Local setting is required.

The high efficiency filter (that has 65% of average dust collecting efficiency) is suitable

Additional optional accessories

Built-in optional high efficiency filter

BRP4A50: Heater control kit

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

6.8 HRV-With DX Coil-(Heat Reclaim Ventilation) VKM-GA(M) Series

6.8.1 General

- Interlocked operation with VRV
- (Controls of interlocked operation for energy saving : The remote controller for air conditioner can be used, so special remote controller for HRV is unnecessary.)
- Mounted for Direct expansion coil unit for outdoor air treatment
- Changeover function for ventilation mode to Auto/Manual
- FRESH-UP operation (Selectable : Supply air rich mode or exhaust air rich mode ; initial setting)
- Mounted for Water flow type Natural evaporating humidifier
- Possible to attach the High efficiency filter
- Attaching the Power supply terminal for easy connection
- Quiet operation
- Changeover function for air flow rate to High/Low (Ultra-high setting is possible.)
- The power supply of HRV is commonly used with the air-conditioner (Single-phase 220-240V, 50Hz)
- Filter sign display and reset
- Timer setting

■ Features of Direct Expansion Coil

- Draftless ventilation in Heating.
- High humidifying function.

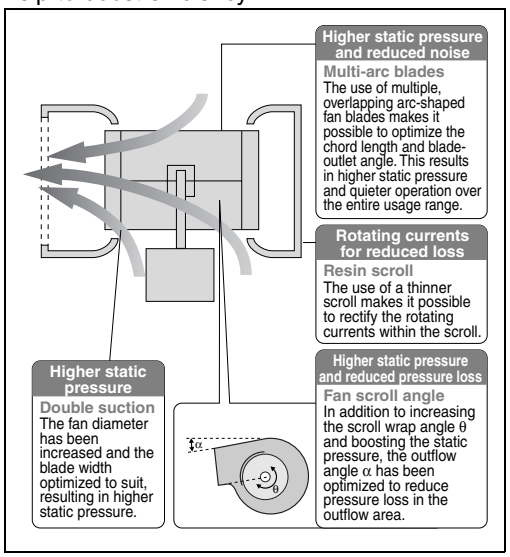

■ How to use this unit

- This unit should be used with air conditioners.
- Air conditioning is impossible only by this unit, because this unit does not have temperature control function. (It's capacity is too small in order to control the room temperature to the whole)
  And should be operated in combination with standard indoor units. (Interlocked operation)
- Independent operation without taking an interlock with indoor units is possible, however, temperature setting by remote controller is impossible.
  In this ON/OFF operation by thermostat depends on factory setting, however, this value is changeable by setting mode on site.
- Model selection should be done not by cooling capacity but by ventilating air flow rate.

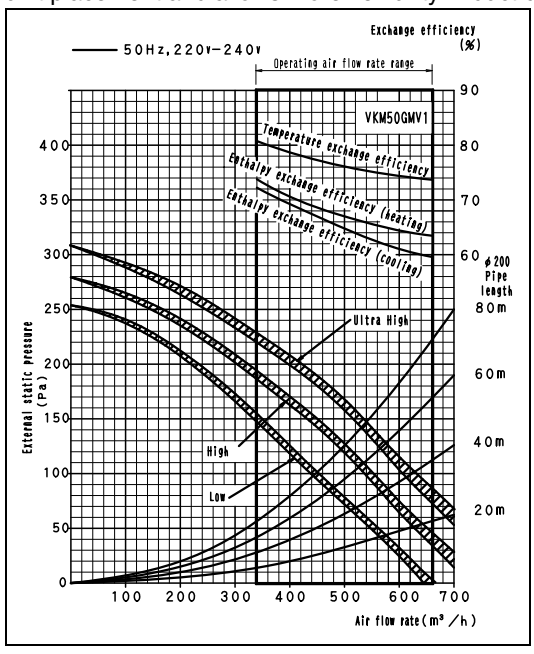

6.8.2 Design Flexibility

6.8.2.1 Efficient Fan Performance Produces a High Static Pressure

Improvements to the fan, including the use of multi-arc blades, a thinner scroll and optimized fan scroll angle, help to boost efficiency.

Dramatically higher static pressure is achieved due to improved fan performance. This reduces limitations on unit placement and allows more flexibility in duct design.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

1

6.8.2.2 Operable Outdoor Temperature Down to –15°C

If the outdoor air temperature falls below –10° C, the unit changes to intermittent operation to prevent freezing of the heat exchanger element and dew condensation within the unit.

Intermittent operation

A thermistor (standard equipment) within the unit detects the outdoor air temperature. Unit operation varies according to the detected temperature.

6.8.2.3 Indoor Unit Connectable to up to 130% of the Capacity

6.8.2.4 Slim Design

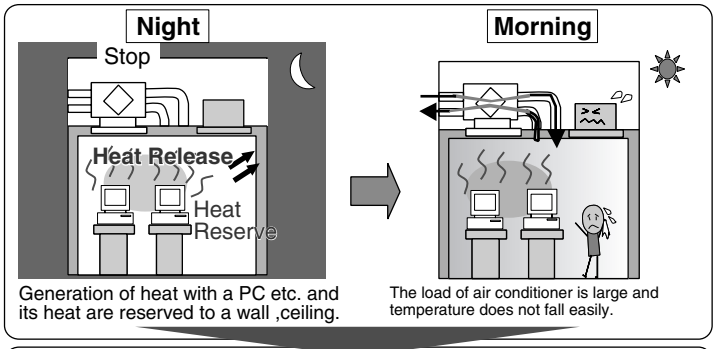

The slim design of only 387 mm in height enables installation inside ceilings with less than 400 mm of clearance.

6.8.3 Energy Saving

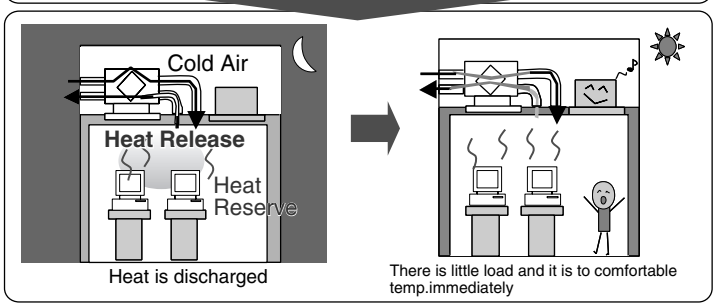

6.8.3.1 Automatic Heat purge Function at Night

Not operation

Automatic heat purge control

The heat which accumulated indoors is discharged at night. Air Conditioning load of the next day is reduced, and efficiency is increased.

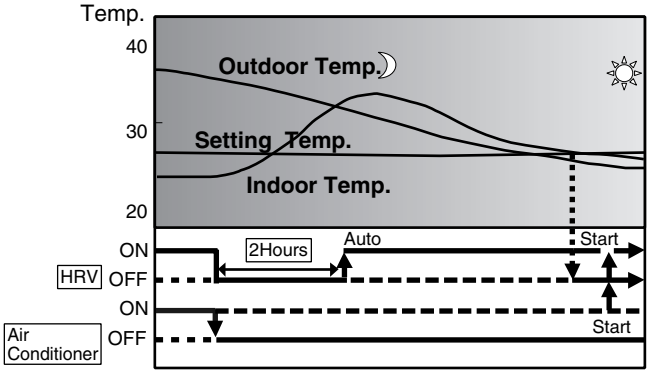

In case of interlocking operation with an air conditioner

■ **Mechanism**

<Operation>

1. Interlocking operation is carried out with the air-conditioning machine, and the time of 2 hours passing after an operation stop is judged to be night.
   (The same judgment as the present preparatory operation)
2. After 2-hour progress, when indoor temperature is higher than the preset temperature of an air-conditioning machine and higher than outdoor temperature, operation is started.
3. Operation will be stopped if indoor temperature falls to air-conditioning machine preset temperature.

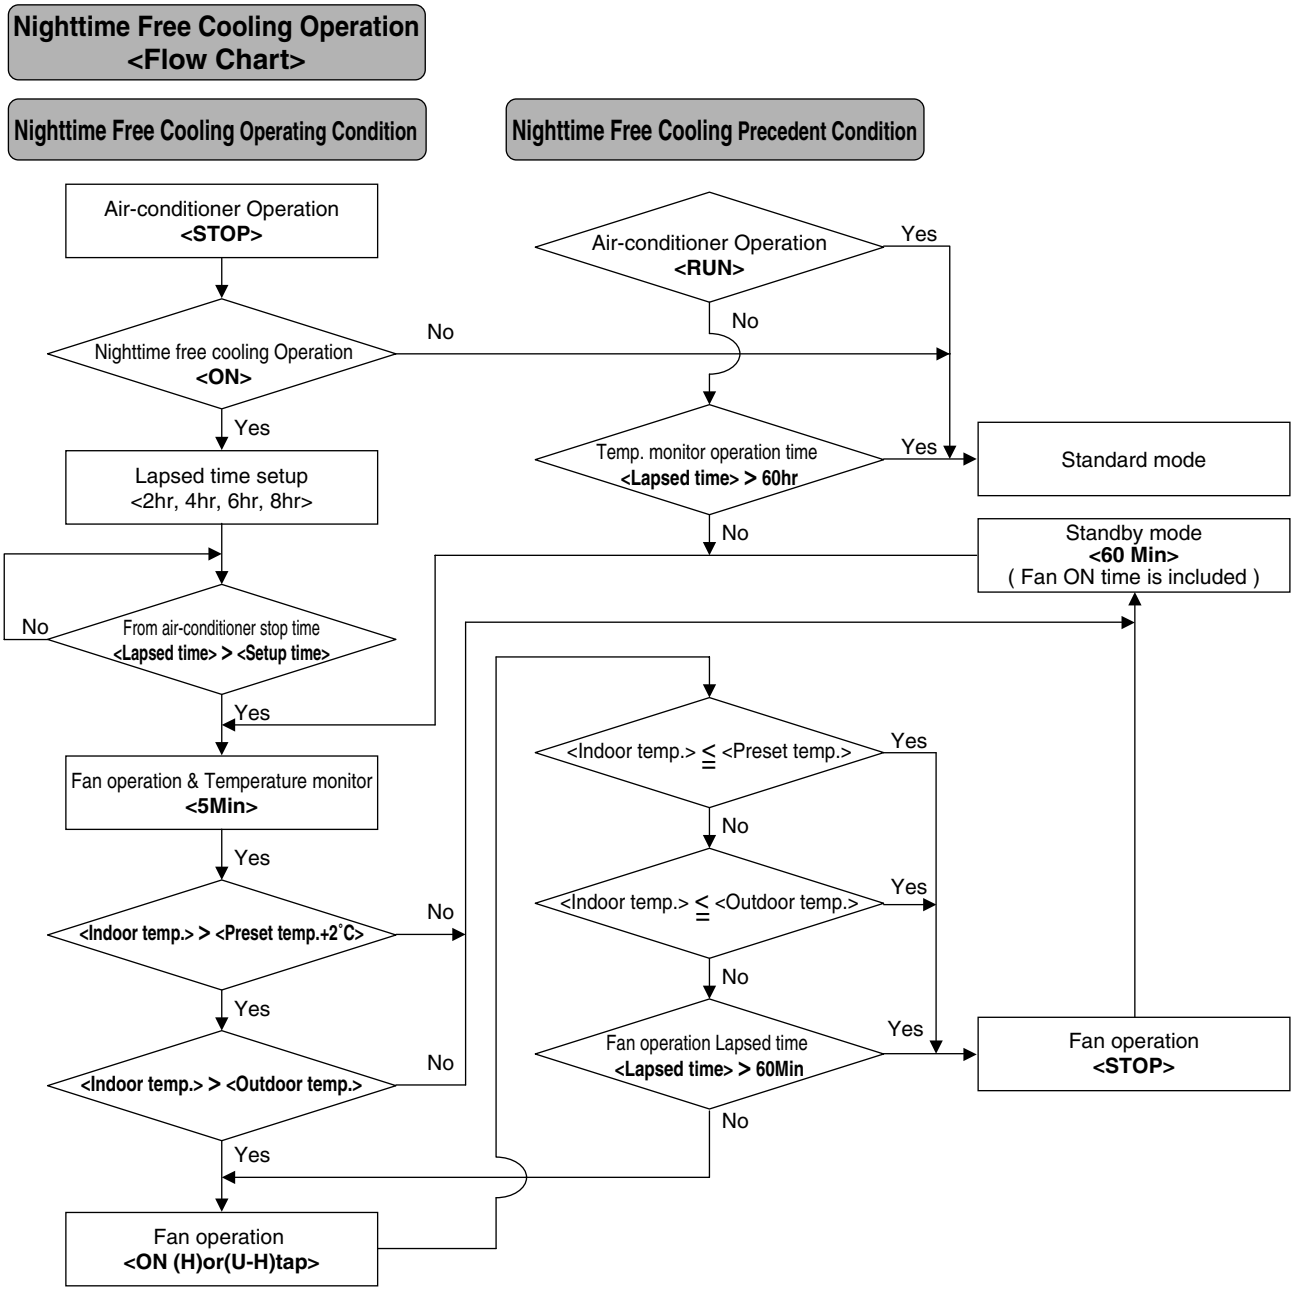

■ **Effect** (Field Setting by remote controller)

It is reduction of about 5% of air-conditioning load at the time of cooling operation.

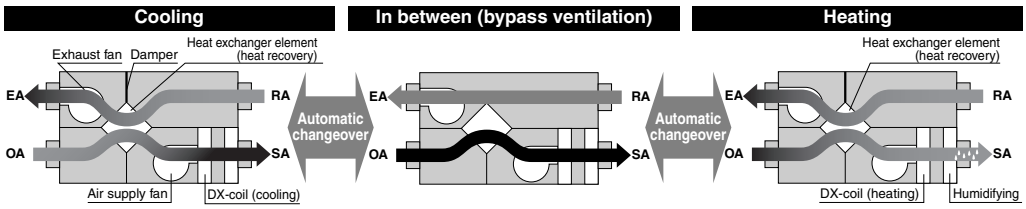

Air conditioning operation carries out to April to October, and air-conditioning load is calculated only with sensible heat load.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

6.8.3.2 Automatic Changeover to Efficient Operation Patterns

Operation automatically changes to the optimum pattern to suit conditions.

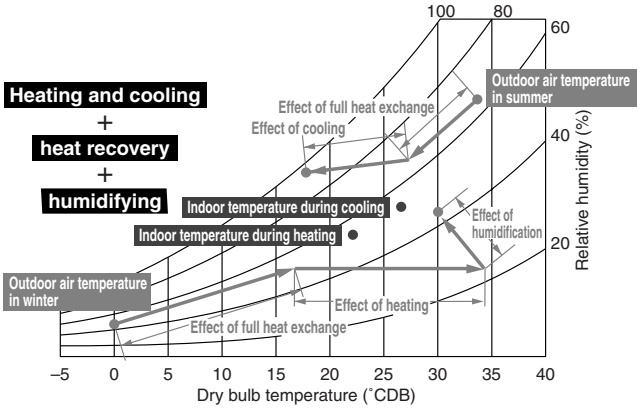

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

6.8.3.3 Efficient Outdoor Air Introduction with Heat Exchanger and Cooling/heating Operation

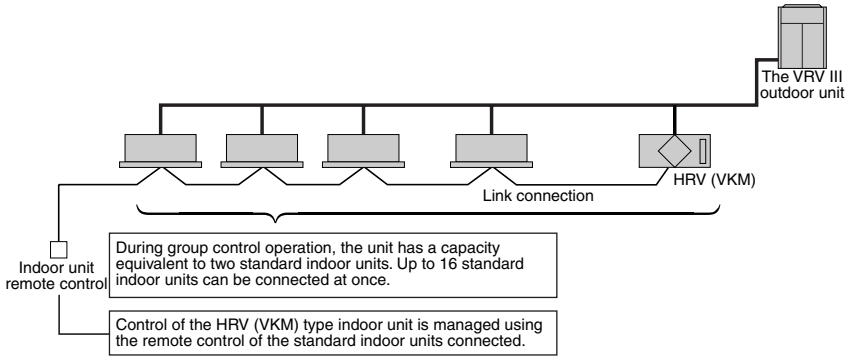

Indoor unit with outdoor air treatment

Using outdoor air, the temperature can be brought near room temperature with minimal cooling capacity through the use of outdoor air.

6.8.3.4 Operations, Such as Cleaning, Ventilation, Cooling/heating and Humidifying, are Possible with One Remote Controller.

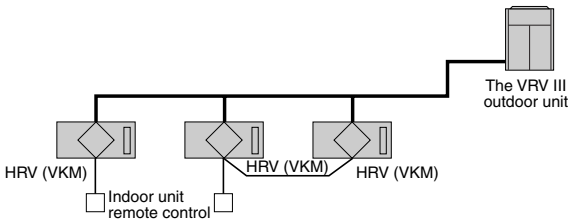

Four air conditioner functions can be managed using a single remote control. This makes it easy to obtain high-quality and energy-efficient outdoor air treatment.

6.8.4 Unique Control System

6.8.4.1 Independent Control Possible

Individual outdoor air treatment operation is possible by connecting an optional remote controller.

6.8.5 Quiet Operation

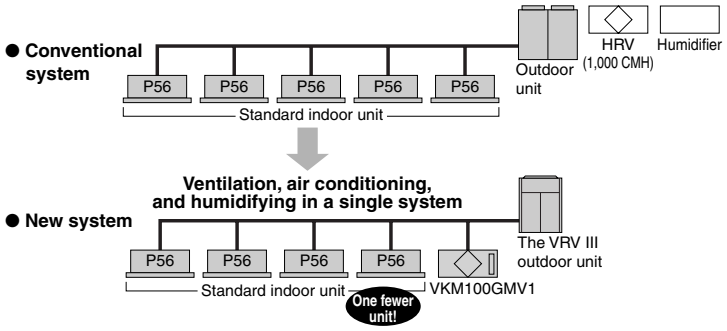

Reduced pressure loss and quieter operation internally lowers the noise output of the 1,000m^3/h type system to 38dB (50Hz 240V, High mode).

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

6.8.6 Easy Installation

6.8.6.1 Integrated System Includes Ventilation, Air Conditioning and Humidifying Operations

Rather than using separate ventilation, air conditioning, and humidifying components, the system incorporating HRV (VKM) integrates all functions, reducing the total number of indoor units and facilitating a far simpler system. The installation space becomes smaller and the labor required for installation and maintenance is reduced significantly.

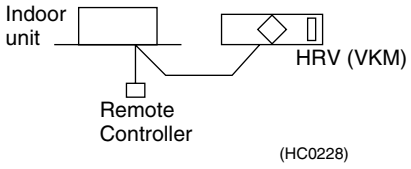

6.8.7 Other Features

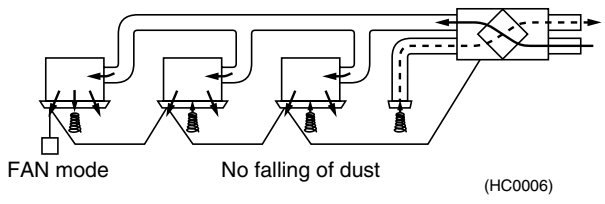

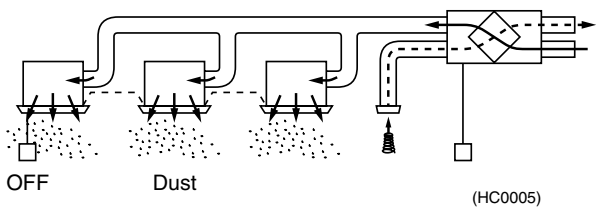

6.8.7.1 Interlocked Operation with VRV

1. Simultaneous ON / OFF with the indoor unit by the indoor unit remote controller.
2. HRV independent operation during air conditioning off season by the indoor unit remote controller.
3. Automatic ventilation mode changeover : Auto / Heat Recovery / Bypass
4. Fan speed changeover by the indoor unit remote controller : High / Low, Ultra-High / High
5. FRESH-UP operation setting
6. Filter sign display notifies the time for cleaning the filter.
7. No need to purchase or install the HRV exclusive remote controller
8. Advantage to IAQ (Internal Air Quality)

Note

4-6 can be set at the initial setting only. (When using the remote controller BRC1C62)

Type	Interlocked operation with air conditioner
Structure	
Features	• Simultaneous operation by air conditioner's remote controller is available. • Fan speed can be set at the initial setting.
Connectable Indoor unit	VRV (all indoor unit)

Daikin's HRV	Other types
	
Dust does not fall off from the air filter because the air supply fan of the interlocked indoor unit remains activated even when the HRV is operated independently.	If conventional HRV, with exclusive remote controller, is directly connected to indoor unit of air conditioner, dust may fall off from air filter when air conditioner is OFF.

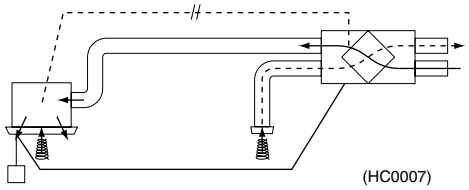

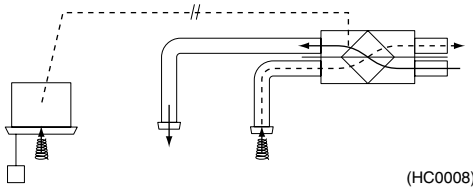

Note

1) In case of the direct duct connection system, operate interlocking with indoor units.

2) Do not connect the duct with discharge air side of indoor units.

Installation Examples

Direct duct connection system	Independent duct system
 (HC0007)	 (HC0008)

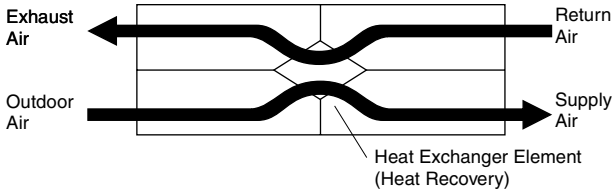

6.8.7.2 Mechanism of Energy Saving

By heat recovery operation

Approx. **20%** reduction of heating / cooling load

+

HRV unit recovers the thermal energy during cooling / heating operation of air conditioner. HRV reduces the cooling / heating load drastically and enhances the heating / cooling efficiency.

(HC0230)

By setting to automatic ventilation mode

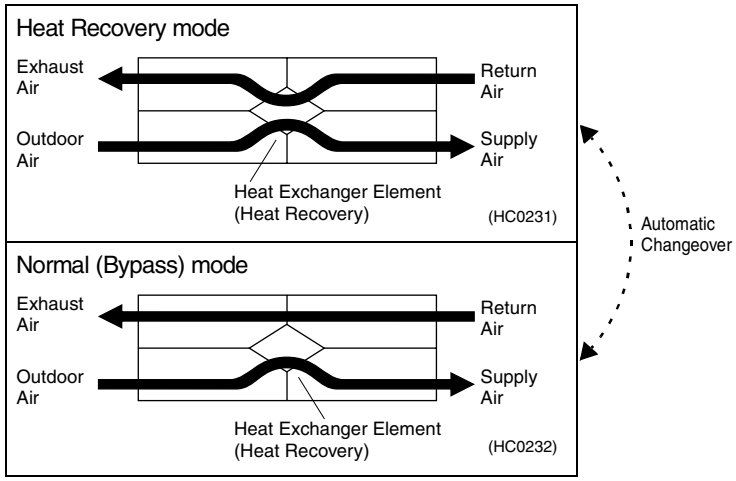

Approx. **6%** reduction of heating / cooling load

+

Proper use of Heat recovery ventilation and normal ventilation saves energy.
When the cooling operation is required in winter, use of heat recovery ventilation is not efficient because the outdoor air temperature is normally lower than that of the indoor. Thus, the proper use of ventilation mode enhances the heating / cooling efficiency.
Automatic Ventilation mode changeover

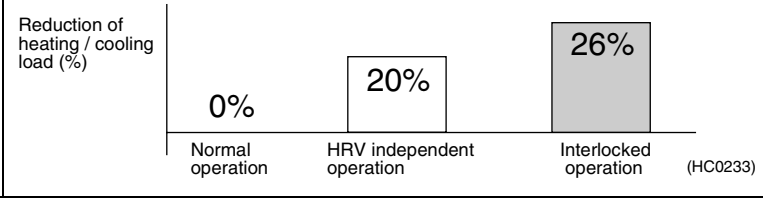

Operation	Sensor of ventilation	Decision of mode (Which is more energy efficient?)
	Difference between indoor / outdoor temp.	
Cooling	Indoor temp. > Outdoor temp. Indoor temp. < Outdoor temp.	Normal ventilation (Bypass) Heat recovery ventilation
Heating	Indoor temp. > Outdoor temp. Indoor temp. < Outdoor temp.	Heat recovery ventilation Normal ventilation (Bypass)

Refer to the CONTROL for the mode changeover.

=

Total **26%** reduction of heating / cooling load

(HC0233)

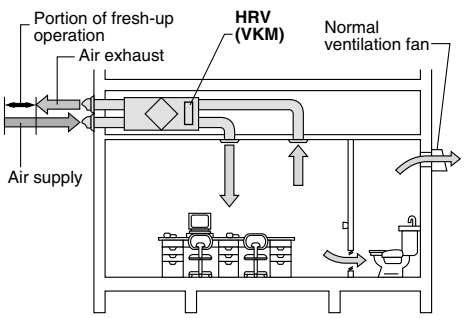

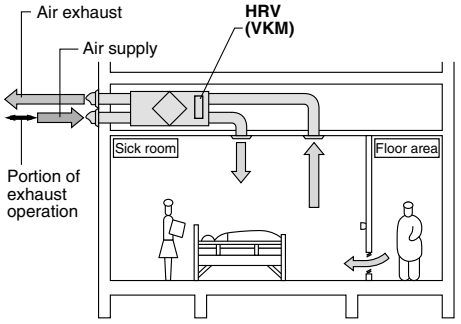

Note :

The total heating / cooling load may vary depending on the climate or the other environmental conditions.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

6.8.7.3 Fresh-up Operation

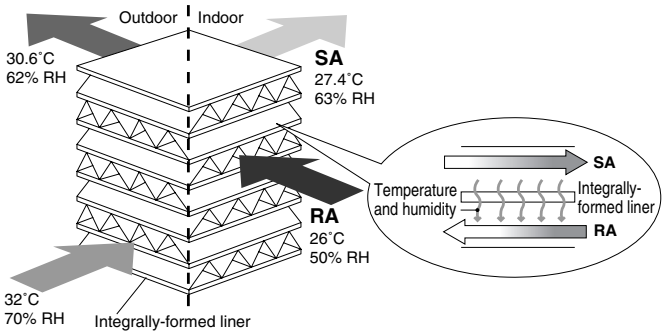

Both the excessive supply mode and the excessive exhaust mode are selectable.
This function creates a more comfortable air environment.

	Supply Fresh-up (Excessive outdoor air supply)	Exhaust Fresh-up (Excessive exhaust air supply)
Detail	Supply air volume can be set at a higher level than the exhaust air by the remote controller.	Exhaust air volume can be set at a higher level than the supply air by the remote controller.
Major effects	• Prevents inflow of toilet odor • Prevents inflow of outdoor air in winter	• Prevents outflow of airborne bacteria from rooms in a hospital • Prevents outflow of odors from rooms in a nursing home
Application	Offices, etc.	Hospitals, Nursing homes, etc.
Example		

6.8.7.4 Proprietary Developed HEP Element

The heat exchange element uses a High Efficiency Paper (HEP) that has superior moisture-absorption and humidifying properties and doubles the current efficiency of moisture absorption. The heat exchange unit speedily recovers heat contained as latent heat (vapor). The element is made of a material with superior flame-resistant properties and is treated with an anti-molding agent.

Operation of the heat exchanger element

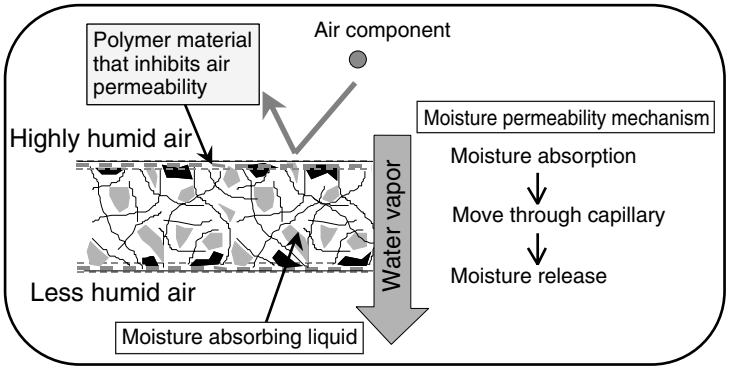

(HC0013)
HEP anti-molding

Features

- High air shielding
  Even in the conventional less humidity conditions, maintaining the features of the material that can get excellent moisture permeability, we have achieved high air shielding, by special processing in the step of milling paper.

- Polymer material that inhibits air permeability that treated on the surface of the heat exchanger element restrains air permeability.

VKM50GAMV1	387
VKM50GAV1	
VKM80GAMV1	
VKM80GAV1	
VKM100GAMV1	
VKM100GAV1	

Parallel air flow system (Daikin)

This system prevents misconnection and simplifies the installation work

Cross air flow system (Others)

6.8.7.6 The Operation is Available When the Outdoor Air Temperature is Down to -15°C

(Operation when the outdoor air temperature becomes lower than -10°C)

When the outdoor air suction temperature becomes lower than -10°C, the unit is changed to intermittent operation to prevent freezing of the heat exchanger element and dew condensation within the unit.

Intermittent operation

The outdoor air thermistor (standard equipment) within the unit detects the temperature. According to the detected temperature, the following operation determines.

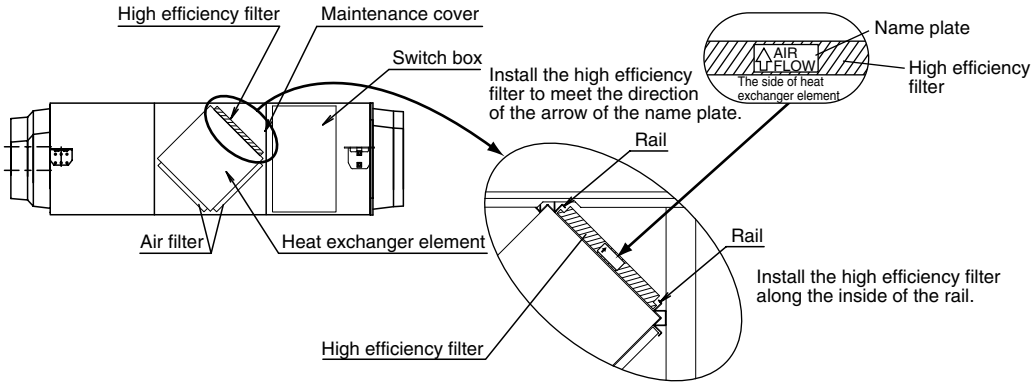

<Step1>

- The air supply fan is changed to intermittent operation, when the temperature is lower than -10°C.
- The intermittent operation of the air supply fan is changed to an operation of each cycle for 45 minutes' operation after stopping operation for 15 minutes.
- The exhaust fan operates continuously according to setup.

<Step2>

- When the temperature becomes lower than -15°C, the unit stops operation to prevent any defect, such as dew condensation and freezing. The unit does not ventilate.
  But, to detect the elevation of the outdoor air temperature, the unit operates for 5 minutes per hour.

6.8.7.7 The High Efficiency Filter (that has 65% of Average Dust Collecting Efficiency) is Suitable

6.8.7.8 Additional Optional Accessories

Built-in optional high efficiency filter

It greatly reduces the installation space.

The installation of access doors and the unit can be reduced.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

■ **Selection Procedures (in Japan)**

Various methods are used to calculate the required ventilating air flow rate according to CO_2 generated by inhabitants in a room, waste gas generated by use of fire, and other conditions of a room.
Here are 2 patterns of calculating methods.

Based on inhabitants

$$\text{Required ventilating air flow rate } (m^3/h) = \frac{20 \times A}{B}$$

A : 20 × Living room floor space (m^2)
B : Area occupied per person (m^2)
The above equation conforms to article 20, 2 No.2 of the Building Standards Act in Japan.

Note :

1. 20 (in the above equation) means "20(m^3 / h / person)", which is the required ventilating air flow rate based on the CO_2 exhausted by an adult sitting still in a room. If smoking is allowed, other calculation method should be used.
2. Use 10 (m^2) if the area occupied per person exceeds 10 (m^2).

<Table 1>

Type of building	Area occupied per person (N)	Remarks
Dining houses, restaurants, coffee-shops	3 m^2	Floor space of a part used for business purposes.
Cabarets, beer halls	2 m^2	Floor space of a part used for business purposes.
Japanese-style restaurants, hall for hire	3 m^2	Floor space of a part used for business purposes.
Store market	3 m^2	Floor space of a part used for business purposes.
Pool rooms, Ping-pong rooms, dance halls, bowling alleys	2 m^2	Floor space of a part used for business purposes.
Pin-ball parlors, Go club houses, mahjong parlors	2 m^2	Floor space of a part used for business purposes.
Inns, hotels, and motels	10 m^2	Floor space of a part used for business purposes.
Massage parlors	5 m^2	Floor space of a part used for business purposes.
Meeting places, public halls	0.5 – 1 m^2	Persons accommodated simultaneously with the number of persons calculated per unit.
Offices	5 m^2	Floor space of an office.

* : Values set by the Metropolitan Maintenance Bureau in Japan.

Note :

1. Table indicates the required ventilating air flow rate calculated as 20 m^3 / h.
2. The area occupied per person by type of business is calculated in reference to Application Standards for building administration in compliance with Building Standards Act in Japan.

Based on Room size

$$\text{Required ventilating air flow rate } (m^3/h) = C \times D \times E$$

C : Number of ventilation required per hour (ventilation / h)
D : Area of room (m^2)
E : Height of Ceiling (m)
Calculation is based on the experiences of hygienic laboratory, etc. to find out the number of hourly ventilation of the room air.
(Selection example)

Place : Living room of common household
Required ventilation : 6 times / h (See Table 2)
Area of room : Approx. 30 (m^2)
Height of ceiling : 2.4 m
Required ventilating air flow rate = $6 \times 30 \times 2.4 \fallingdotseq$ 432 (m^3 / h)

Required ventilating air flow rate and the unit size 500 is almost equal.
So select the close size of the unit.
In this case, select VKM500GMV1.

1. Features

Ceiling Mounted Cassette (Round Flow) Type

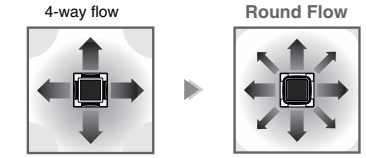

New

FXFQ25P/FXFQ32P/FXFQ40P
FXFQ50P/FXFQ63P/FXFQ80P
FXFQ100P/FXFQ125P

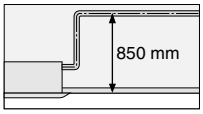

360° airflow improves temperature distribution and offers a comfortable living environment.

- The industry's first* Round Flow Ceiling Mounted Cassette type offers 360° airflow with improved temperature distribution.

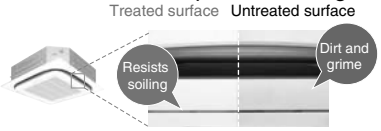

* As of April 2004, the release date for Japan.

- All models are lighter than the conventional ones. Ex: Models FXFQ25P-50P are 4.5 kg lighter (reduced from 24 kg to 19.5 kg).
- Drain pump is equipped as standard accessory, and the lift height has been improved from 750 mm to 850 mm.

- A modern sophisticated decoration panel has been applied, with a panel surface that has been treated with a dirt-repellant coating.

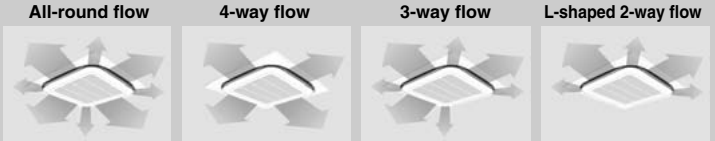

- Control of the airflow rate has been improved from 2-step to 3-step control.
- Low operation sound level (dB(A))

FXFQ-P	25	32	40	50	63	80	100	125
Sound level (HH/H/L)	30/28.5/27		31/29/27	32/29.5/27	34/31/28	36/33.5/31	43/37.5/32	44/39/34

- A new antibacterial treatment that uses silver ions has been applied to the drain pan, preventing the growth of slime, mould and bacteria that cause blockages and odours.
- The horizontal louvres prevent dew condensation. Their non-flocking surfaces, which repel dirt, are easy to clean.
- The air filter has an anti-mould and antibacterial treatment that prevents the growth of mould generated from dust or moisture that may adhere to the filter.

- Example of airflow patterns:
  360° airflow is available, as well as 2- to 4-way flows, so you can choose the most suitable airflow pattern depending on location or room layout.

Note: Whatever the discharge direction, the same type of panel is used. If installing for other than all-round flow, an air discharge outlet sealing member (option) must be used to close each unused outlet.

ITEM	PART NAME	REMARK
9	DRAIN HOSE (ACCESSORY)	LOCAL CONNECTION OD ϕ 32 (OUTLET) (UNIT CONNECTION OD ϕ 26)
8	CORNER DECORATION COVER	
7	SUCTION GRILLE	
6	AIR-OUTLET	
5	CONNECTION WIRING/ REMOTE CONTROL WIRING CONNECTION	
4	POWER-SOURCE WIRING AND A UNIT WIRING CONNECTION	
3	DRAIN PIPE CONNECTION	VP25 (OD ϕ 32)
2	GAS PIPE CONNECTION	ϕ 12.7 (FLARE CONNECTION)
1	LIQUID PIPE CONNECTION	ϕ 6.4 (FLARE CONNECTION)

• REQUIRED SPACE

* WHEN THE BLOW-OFF GRILL IS CLOSING. THE REQUIRED SPACE IS 500mm OR MORE. WHEN UNITING AND CLOSING A CORNER PART (BOTH RIGHT AND LEFT OF THE BLOW-OFF GRILL TO CLOSE), IT IS 200mm OR MORE.

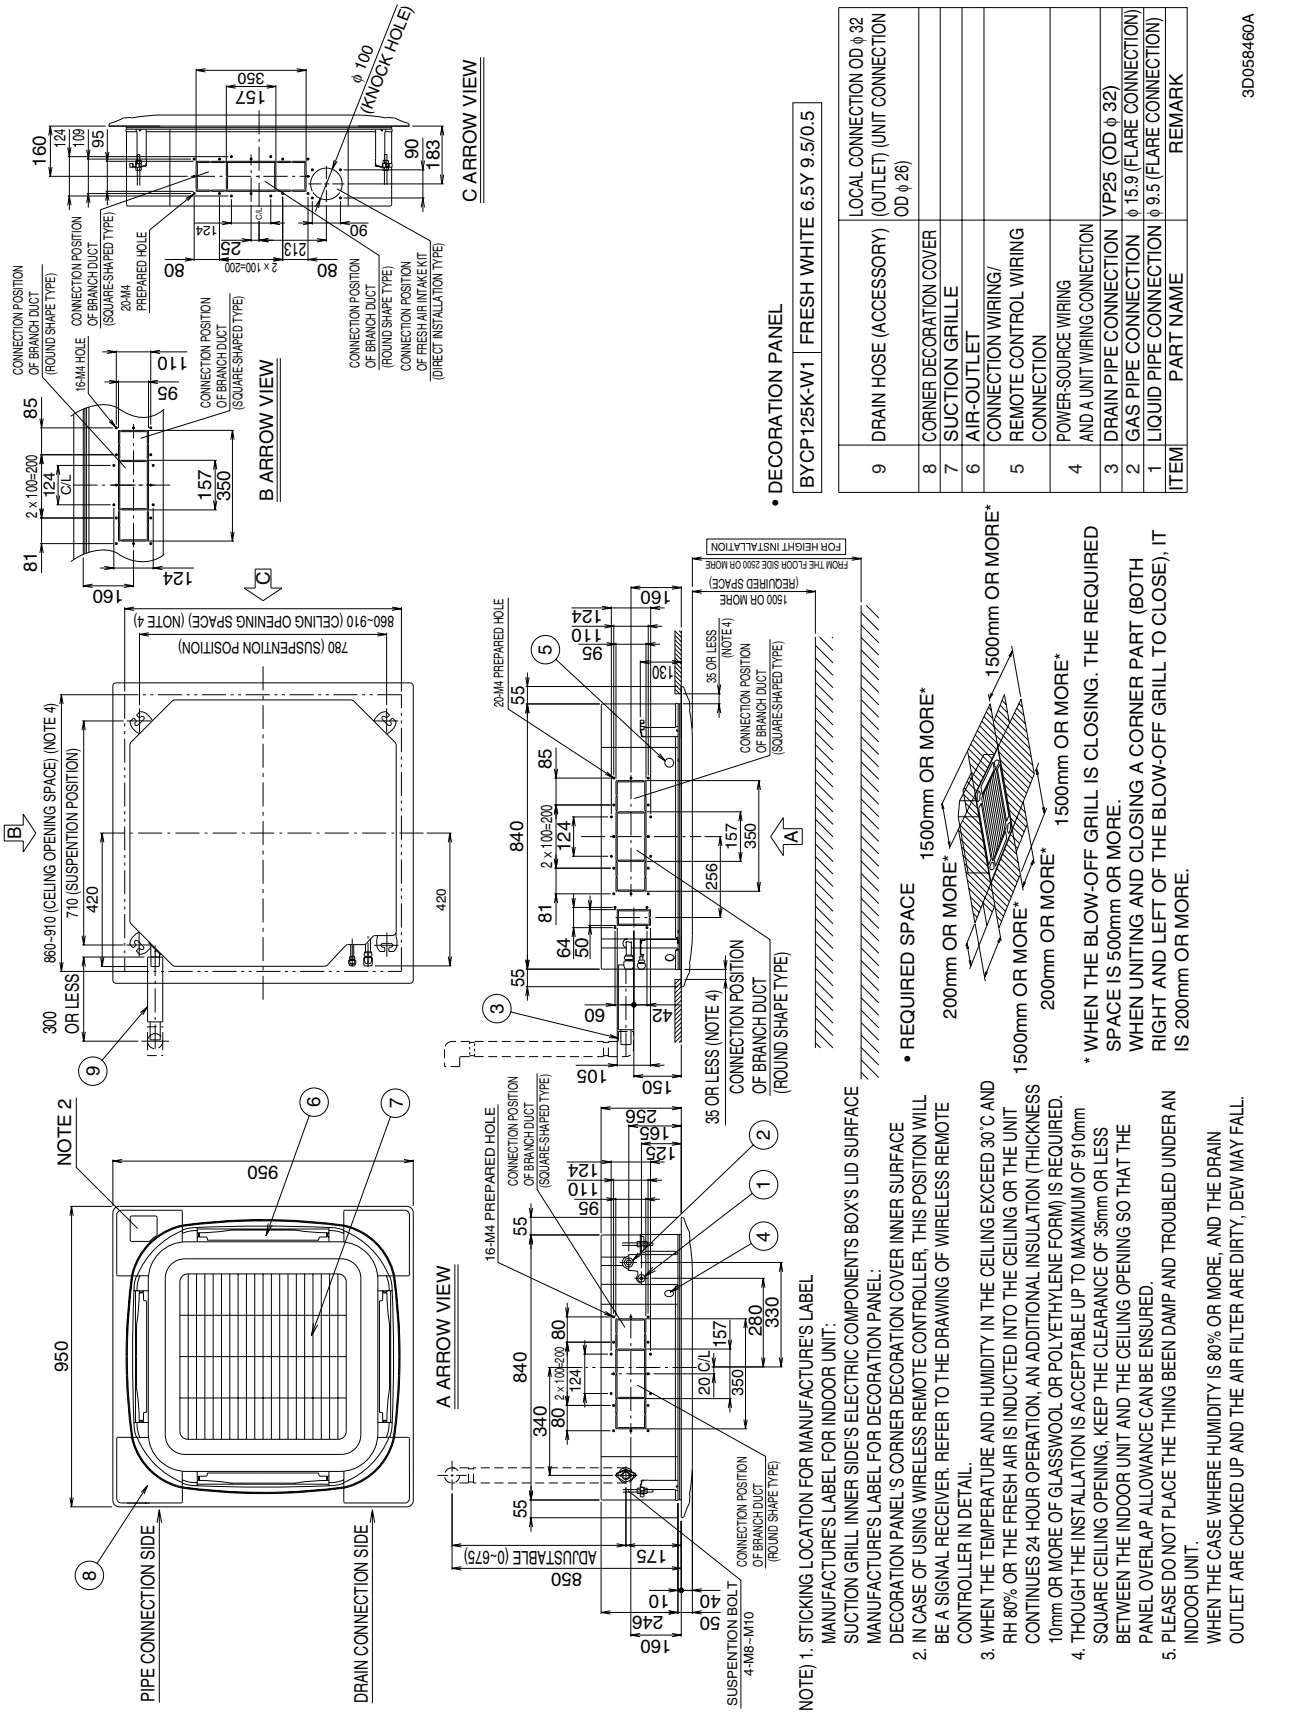

NOTE) 1. STICKING LOCATION FOR MANUFACTURE'S LABEL
MANUFACTURE'S LABEL FOR INDOOR UNIT:
SUCTION GRILL INNER SIDE'S ELECTRIC COMPONENTS BOX'S LID SURFACE
MANUFACTURE'S LABEL FOR DECORATION PANEL:
DECORATION PANEL'S CORNER DECORATION COVER INNER SURFACE
2. IN CASE OF USING WIRELESS REMOTE CONTROLLER, THIS POSITION WILL BE A SIGNAL RECEIVER. REFER TO THE DRAWING OF WIRELESS REMOTE CONTROLLER IN DETAIL.
3. WHEN THE TEMPERATURE AND HUMIDITY IN THE CEILING EXCEED 30°C AND RH 80% OR THE FRESH AIR IS INDUCTED INTO THE CEILING OR THE UNIT CONTINUES 24 HOUR OPERATION, AN ADDITIONAL INSULATION (THICKNESS 10mm OR MORE OF GLASSWOOL OR POLYETHYLENE FORM) IS REQUIRED.
4. THOUGH THE INSTALLATION IS ACCEPTABLE UP TO MAXIMUM OF 910mm SQUARE CEILING OPENING, KEEP THE CLEARANCE OF 35mm OR LESS BETWEEN THE INDOOR UNIT AND THE CEILING OPENING SO THAT THE PANEL OVERLAP ALLOWANCE CAN BE ENSURED.
5. PLEASE DO NOT PLACE THE THING BEEN DAMP AND TROUBLED UNDER AN INDOOR UNIT.
WHEN THE CASE WHERE HUMIDITY IS 80% OR MORE, AND THE DRAIN OUTLET ARE CHOKED UP AND THE AIR FILTER ARE DIRTY, DEW MAY FALL.

6. Electric Characteristics

Units				Power supply		IFM		Input(W)	
Model	Hz	Volts	Voltage range	MCA	MFA	kW	FLA	Cooling	Heating
FXFQ25PVE	50	220-240	MAX. 264 Min. 198	0.3	15	0.056	0.2	33	27
FXFQ32PVE				0.3	15	0.056	0.2	33	27
FXFQ40PVE				0.3	15	0.056	0.2	47	34
FXFQ50PVE				0.3	15	0.056	0.2	52	38
FXFQ63PVE				0.4	15	0.056	0.3	66	53
FXFQ80PVE				0.5	15	0.056	0.4	93	75
FXFQ100PVE				1.3	15	0.120	1.0	187	174
FXFQ125PVE				1.5	15	0.120	1.2	209	200

Symbols:

MCA : Min. Circuit Amps (A)
MFA : Max. Fuse Amps (See note 5)
kW : Fan Motor Rated Output(kW)
FLA : Full Load Amps(A)
IFM : Indoor Fan Motor

Note:

1. Voltage range

   Units are suitable for use on electrical systems where voltage supplied to unit terminals is not below or above listed range limits.

2. Maximum allowable voltage unbalance between phases is 2%.

3. MCA/MFA

   MCA = 1.25 X FLA

   MFA ≦ 4 X FLA

   (Next lower standard fuse rating. Min.15A)

4. Select wire size based on the MCA.

5. Instead of fuse, use Circuit Breaker.

8. Sound Levels

Overall

■ **Ceiling Mounted Cassette (Round Flow) Type**

Note:

1. The operating conditions are assumed to be standard (JIS conditions).
2. These operating values were obtained in a dead room (conversion values).
   Sound level will vary depending on a range of factors such as the construction (acoustic absorption coefficient) of the particular room in which the equipments installed.

12. TEST OPERATION 24

1. SAFETY PRECAUTIONS

Please read these “SAFETY PRECAUTIONS” carefully before installing air conditioning unit and be sure to install it correctly. After completing installation, conduct a trial operation to check for faults and explain to the customer how to operate the air conditioner and take care of it with the aid of the operation manual. Ask the customer to store the installation manual along with the operation manual for future reference.
This air conditioner comes under the term “appliances not accessible to the general public”.

This unit is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

Meaning of WARNING and CAUTION notices.

⚠ **WARNING** .....Failure to follow these instructions properly may result in personal injury or loss of life.

⚠ **CAUTION** .....Failure to observe these instructions properly may result in property damage or personal injury, which may be serious depending on the circumstances.

⚠ WARNING

- Ask your dealer or qualified personnel to carry out installation work.
  Do not attempt to install the air conditioner yourself. Improper installation may result in water leakage, electric shocks or fire.
- Install the air conditioner in accordance with the instructions in this installation manual.
  Improper installation may result in water leakage, electric shocks or fire.
- Consult your local dealer regarding what to do in case of refrigerant leakage.
  When the air conditioner is to be installed in a small room, it is necessary to take proper measures so that the amount of any leaked refrigerant does not exceed the concentration limit in the event of a leakage. Otherwise, this may lead to an accident due to oxygen depletion.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

- Be sure to use only the specified accessories and parts for installation work.
  Failure to use the specified parts may result in the unit falling, water leakage, electric shocks or fire.
- Install the air conditioner on a foundation strong enough to withstand the weight of the unit.
  A foundation of insufficient strength may result in the equipment falling and causing injury.
- Carry out the specified installation work after taking into account strong winds, typhoons or earthquakes.
  Failure to do so during installation work may result in the unit falling and causing accidents.
- Make sure that a separate power supply circuit is provided for this unit and that all electrical work is carried out by qualified personnel according to local laws and regulations and this installation manual.
  An insufficient power supply capacity or improper electrical construction may lead to electric shocks or fire.
- Make sure that all wiring is secured, the specified wires are used, and that there is no strain on the terminal connections or wires.
  Improper connections or securing of wires may result in abnormal heat build-up or fire.
- When wiring the power supply and connecting the remote controller wiring and transmission wiring, position the wires so that the terminal box lid can be securely fastened.
  Improper positioning of the terminal box lid may result in electric shocks, fire or the terminals overheating.
- If refrigerant gas leaks during installation, ventilate the area immediately.
  Toxic gas may be produced if the refrigerant comes into contact with fire.
- After completing installation, check for refrigerant gas leakage.
  Toxic gas may be produced if the refrigerant gas leaks into the room and comes into contact with a source of fire, such as a fan heater, stove or cooker.
- Be sure to switch off the unit before touching any electrical parts.
- Do not directly touch refrigerant that has leaked from refrigerant pipes or other areas, as there is a danger of frostbite.
- Be sure to earth the air conditioner.
  Do not earth the unit to a utility pipe, lightning conductor or telephone earth lead.
  Imperfect earthing may result in electric shocks or fire.
  A high surge current from lightning or other sources may cause damage to the air conditioner.
- Be sure to install an earth leakage breaker.
  Failure to install an earth leakage breaker may result in electric shocks or fire.

⚠ CAUTION

- While following the instructions in this installation manual, install drain piping to ensure proper drainage and insulate piping to prevent condensation.
  Improper drain piping may result in indoor water leakage and property damage.
- Install the indoor and outdoor units, power cord and connecting wires at least 1 meter away from televisions or radios to prevent picture interference and noise.
  (Depending on the incoming signal strength, a distance of 1 meter may not be sufficient to eliminate noise.)
- Remote controller (wireless kit) transmitting distance can be shorter than expected in rooms with electronic fluorescent lamps (inverter or rapid start types).
  Install the indoor unit as far away from fluorescent lamps as possible.
- Do not install the air conditioner in the following locations:
  1. Where there is a high concentration of mineral oil spray or vapour (e.g. a kitchen).
     Plastic parts will deteriorate, parts may fall off and water leakage could result.
  2. Where corrosive gas, such as sulphurous acid gas, is produced.
     Corroding of copper pipes or soldered parts may result in refrigerant leakage.
  3. Near machinery emitting electromagnetic radiation.
     Electromagnetic radiation may disturb the operation of the control system and result in a malfunction of the unit.
  4. Where flammable gas may leak, where there is carbon fibre or ignitable dust suspensions in the air, or where volatile flammables such as paint thinner or gasoline are handled.
     Operating the unit in such conditions may result in fire.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2

2. BEFORE INSTALLATION

Do not exert pressure on the resin parts when opening the unit or when moving it after opening
Be sure to check the type of R410A refrigerant to be used before doing any work. (Using an incorrect refrigerant will prevent normal operation of the unit.)

- When opening the unit or moving it after opening, be sure to lift it by holding on to the lifting lugs without exerting any pressure on other parts, especially, drain piping, and other resin parts.
- Decide upon a line of transport.
- Leave the unit inside its packaging while moving, until reaching the installation site. Use a sling of soft material, where unpacking is unavoidable or protective plates together with a rope when lifting, to avoid damage or scratches to the unit.
- Refer to the installation manual of the outdoor unit for items not described in this manual.
- Do not dispose of any parts necessary for installation until the installation is complete.

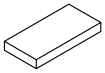

1. PRECAUTIONS

- Be sure to read this manual before installing the indoor unit.
- When selecting installation site, refer to the paper pattern.
- This unit is suitable for installation in a household, commercial and light industrial environment.
- Do not install or operate the unit in rooms mentioned below.
  - Laden with mineral oil, or filled with oil vapor or spray like in kitchens. (Plastic parts may deteriorate.)
  - Where corrosive gas like sulfurous gas exists. (Copper tubing and brazed spots may corrode.)
  - Where volatile flammable gas like thinner or gasoline is used.
  - Where machines can generate electromagnetic waves. (Control system may malfunction.)
  - Where the air contains high levels of salt such as that near the ocean and where voltage fluctuates greatly such as that in factories. Also in vehicles or vessels.

2. ACCESSORIES

Check the following accessories are included with your unit.

Name	(1) Drain hose	(2) Metal clamp	(3) Washer for hanger bracket	(4) Clamp	(5) Paper pattern for installation	(6) Screw (M4)
Quantity	1 pc.	1 pc.	8 pcs.	6 pcs.	1 pc.	4 pcs.
Shape					Also used as packing material 	For paper pattern for installation 

Name	(7) Washer fixing plate	Insulation for fitting	Sealing pad			Installation guide	
Quantity	4 pcs.	1 each	1 each	1 pc.	1 pc.	1 pc.	
Shape		(8) for gas pipe  (9) for liquid pipe 	(10) Large  (11) Medium-1  (12) Medium-2 	(13) Small 	(14) 	(15) 	(Other) • Installation manual • Operation manual

3P161684-3B

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

3. OPTIONAL ACCESSORIES

- The optional decoration panel and remote controller are required for this indoor unit. (Refer to Table 1, 2) (However, the remote controller is not required for the slave unit of a simultaneous operation system.)

Table 1

Unit model	Optional decoration panel
FXFQ25 · 32 · 40 · 50 · 63 · 80 · 100 · 125PVE	BYCP125K-W1
	Color : Fresh white

- These are two types of remote controllers: wired and wireless. Select a remote controller from Table 2 according to customer request and install in an appropriate place.

Table 2

Remote controller	
Wired type	BRC1C62
Wireless type (Heat pump type/Cooling only type)	BRC7F634F/BRC7F635F

NOTE

- If you wish to use a remote controller that is not listed in “Table 2” on page 4, select a suitable remote controller after consulting catalogs and technical materials.

FOR THE FOLLOWING ITEMS, TAKE SPECIAL CARE DURING CONSTRUCTION AND CHECK AFTER INSTALLATION IS FINISHED.

1. Items to be checked after completion of work

Items to be checked	If not properly done, what is likely to occur	Check
Are the indoor unit and outdoor unit fixed firmly?	The unit may drop, vibrate or make noise.	
Is the outdoor unit fully installed?	The unit may malfunction or the components burn out.	
Is the gas leak test finished?	It may result in insufficient cooling.	
Is the unit fully insulated?	Condensate water may drip.	
Does drainage flow smoothly?	Condensate water may drip.	
Does the power supply voltage correspond to that shown on the name plate?	The unit may malfunction or the components burn out.	
Are wiring and piping correct?	The unit may malfunction or the components burn out.	
Is the unit safely grounded?	It may result in electric shock.	
Is wiring size according to specifications?	The unit may malfunction or the components burn out.	
Is something blocking the air outlet or inlet of either the indoor or outdoor units?	It may result in insufficient cooling.	
Are refrigerant piping length and additional refrigerant charge noted down?	The refrigerant charge in the system is not clear.	

2. Items to be checked at time of delivery

* Also review the “1. SAFETY PRECAUTIONS”

Items to be checked	Check
Are the terminal box lid, air filter, suction grille attached?	
Did you explain about operations while showing the instruction manual to your customer?	
Did you hand the instruction manual over to your customer?	

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2

Points for explanation about operations

The items with ⚠ WARNING and ⚠ CAUTION marks in the instruction manual are the items pertaining to possibilities for bodily injury and material damage in addition to the general usage of the product. Accordingly, it is necessary that you make a full explanation about the described contents and also ask your customers to read the instruction manual.

4. NOTE TO THE INSTALLER

Be sure to instruct customers how to properly operate the unit (especially cleaning filters, operating different functions, and adjusting the temperature) by having them carry out operations themselves while looking at the manual.

3. SELECTING INSTALLATION SITE

〈Hold the unit by the 4 lifting lugs when opening the box and moving it, and do not exert pressure on to any other part piping (refrigerant, drain, etc.) or plastic parts.
If the temperature or humidity inside the ceiling might rise above 30˚C or RH 80%, respectively, use the high-humidity kit (sold separately) or add extra insulation to the main unit body.
Use glass wool or polyethylene foam as insulation and make sure it is at least 10mm thick and fits inside the ceiling opening.〉

The direction this product blows can be selected. However, a separately sold shut-off material kit is needed in order to make the unit blow in two, three, or four (corner shut-off) directions.

(1) Select an installation location with the customer's approval which matches the following conditions.
- A location from which cool (warm) air will reach the whole room.
- A location with no objects blocking the air passage.
- A location where drainage can be done with no problem.
- A location strong enough to support the weight of the indoor unit.
- Locations where the wall is not significantly tilted.
- A location which leaves enough room for installation and service work.
- A location where there is no risk of flammable gas leaking.
- A location where the length of the indoor-outdoor piping is no longer than the tolerated length (see the installation manual that came with the outdoor unit for details).

[Space required for installation]

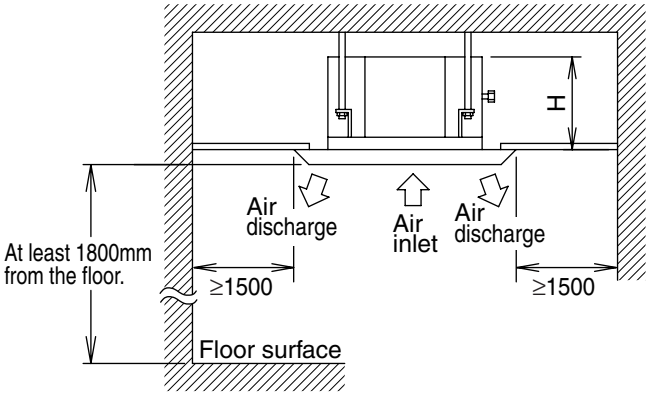

Fig. 1

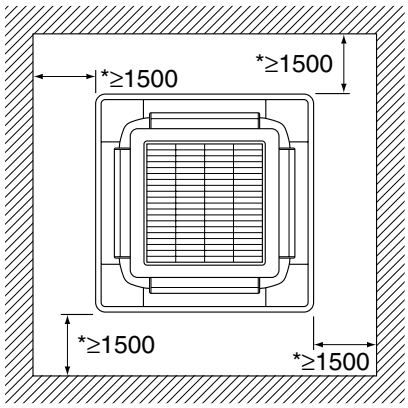

Fig. 2

Model	H (mm)
FXFQ25 · 32 · 40 · 50 · 63 · 80PVE	256
FXFQ100 · 125PVE	298

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

⚠ CAUTION

- The indoor and outdoor units and the power supply wiring and remote controller cord must be installed at least 1m away from any televisions or radios. This is to prevent interference with picture and sound reception. (Interference may occur even at 1m away depending on the reception quality.)
- If installing the wireless kit, the distance of the signal sent from the remote controller might be shorter if there are fluorescent lights which are electrically started (such as with inverters, rapid starters, etc.) in the room. The indoor unit should be installed as far away from fluorescent lights as possible.

(2) Ceiling height
This product can be installed in ceilings up to 3.5m high (4.2m high for the 100 and 125).
If the ceiling height is 2.7m (3.2m for the 100 and 125) or more, field settings will have to be made with the remote controller. See “11. FIELD SETTING” for details.

(3) Air direction
The air direction shown in Fig. 3 is an example.
Select the appropriate number of directions according to the shape of the room and the location of the unit. (Field settings have to be made using the remote controller and the outlet vents have to be shut off if two, three, or four (corner shut-off) directions are selected. See the shut-off materials (sold separately) installation manual for details.)

(4) Use eyebolts for installation. Check if the location for the installation is strong enough to support the weight of the unit, reinforce it if necessary, and install using eyebolts. (The spacing of the installation is shown on the “paper pattern for installation (5)”.)

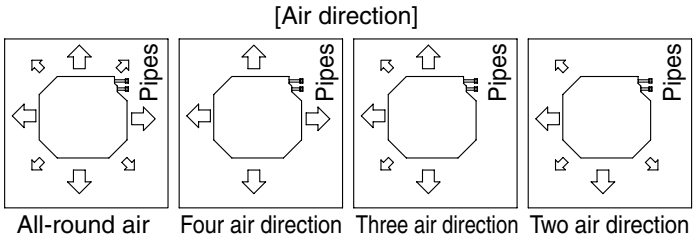

Fig. 3

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2

4. PREPARATIONS BEFORE INSTALLATION

(1) Relation of ceiling opening to unit and suspension bolt position.

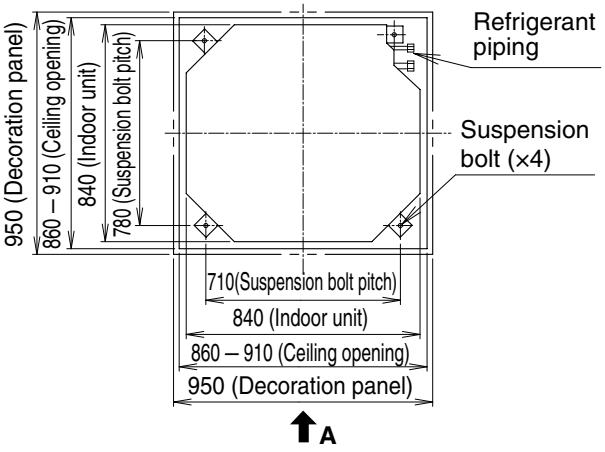

Fig. 4

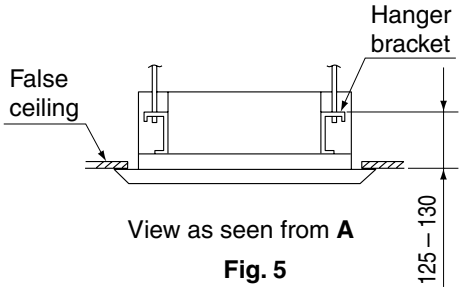

Fig. 5

■ **Installation is possible when ceiling opening dimensions is as follows**

• When installing the unit within the frame for fixing false ceiling.

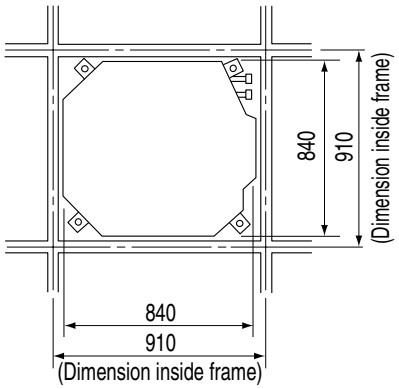

Fig. 6

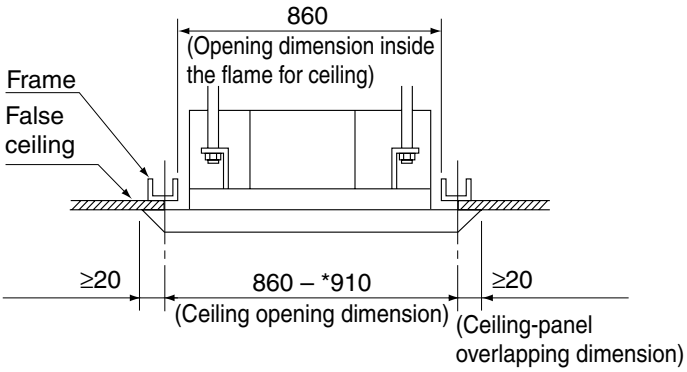

Fig. 7

NOTE

• Installation is possible with a ceiling dimension of 910mm (marked with *). However, to achieve a ceiling-panel overlapping dimension of 20mm, the spacing between the ceiling and the unit should be 35mm or less. If the spacing between ceiling and the unit is over 35mm, attach ceiling material to ■ part or recover the ceiling.

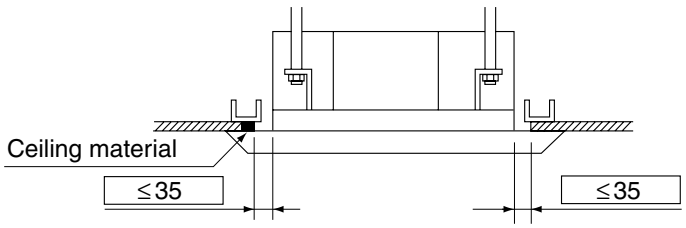

Fig. 8

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

(2) Make the ceiling opening needed for installation where applicable. (For existing ceilings)

- Refer to the paper pattern for installation (5) for ceiling opening dimensions.
- Create the ceiling opening required for installation. From the side of the opening to the casing outlet, implement the refrigerant and drain piping and wiring for remote controller (unnecessary for wireless type) and indoor-outdoor unit casing outlet. Refer to “6. REFRIGERANT PIPING WORK”, “7. DRAIN PIPING WORK” and “8. ELECTRIC WIRING WORK”.
- After making an opening in the ceiling, it may be necessary to reinforce ceiling beams to keep the ceiling level and to prevent it from vibrating. Consult the builder for details.

(3) Install the suspension bolts.

(Use either a M8~M10 size bolt)
Use a hole-in anchor for existing ceilings, and a sunken insert, sunken anchor or other field supplied parts for new ceilings to reinforce the ceiling to bear the weight of the unit.
Adjust clearance (50 – 100mm) from the ceiling before proceeding further.

<installation example>

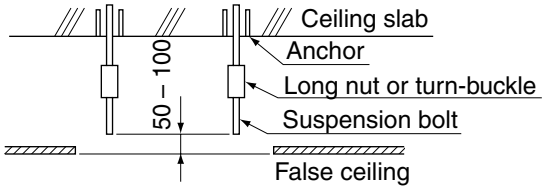

Fig. 9

NOTE

- All the above parts are field supplied.

5. INDOOR UNIT INSTALLATION

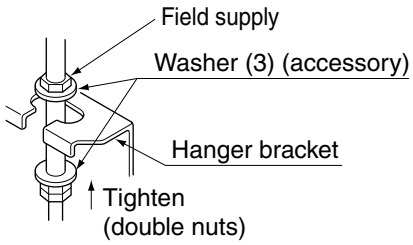

Installing optional accessories (except for the decoration panel) before installing the indoor unit is easier. However, for existing ceilings, install fresh air inlet component kit and branch duct before installing the unit.

As for the parts to be used for installation work, be sure to use the provided accessories and specified parts designated by our company.

(1) For new ceilings

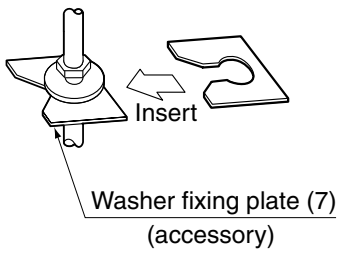

(1-1)Install the indoor unit temporarily.

- Attach the hanger bracket to the suspension bolt. Be sure to fix it securely by using a nut and washer (3) from the upper and lower sides of the hanger bracket.
  The washer fixing plate (7) will prevent the washer from falling.

[Securing the hanger bracket]

Fig. 10

[Securing the washer]

Fig. 11

(1-2) Refer to the paper pattern for installation (5) for ceiling opening dimension.
Consult the builder or carpenter for details.

- The center of the ceiling opening is indicated on the paper pattern for installation.
  The center of the unit is indicated on the triangular mark to the unit bottom and on the paper pattern for installation.
- Fix the paper pattern to the unit with screws (6) (×4).
- Ceiling height is shown on the side of the paper pattern for installation (5). Adjust the height of the unit according to this indication.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2

Please perform one of the following, as the shape of the paper pattern for installation differs according to the model.

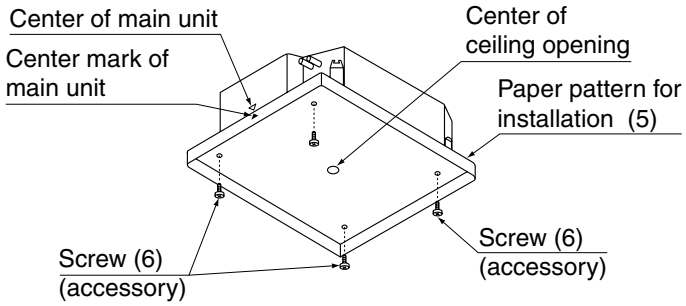

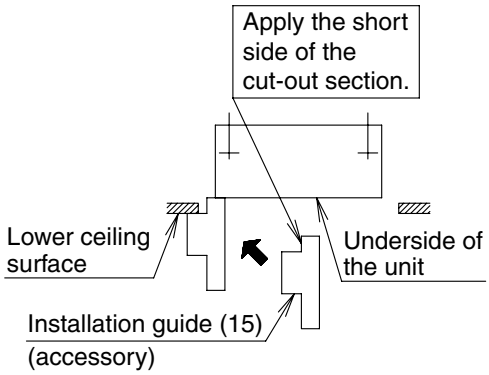

Fig. 12

[Installation of paper pattern for installation]

<Ceiling work>

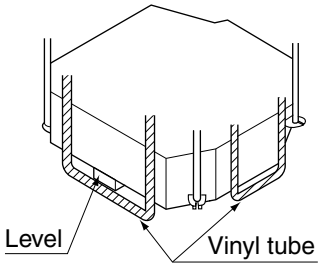

(1-3) Adjust the unit to the right position for installation.
(Refer to **"4. PREPARATIONS BEFORE INSTALLATION-(1)"**.)
- Using the Installation guide (15) allows you to check the positions from the underside of the unit to the lower ceiling surface.

(1-4) Check the unit is horizontally level.
- The indoor unit is equipped with a built-in drain pump and float switch. Verify that it is level by using a level or a water-filled vinyl tube.

CAUTION

If the unit is tilted against condensate flow, the float switch may malfunction and cause water to drip.

[Maintaining horizontality]

Fig. 13

(1-5) Remove the washer fixing plate (7) used for preventing the washer from falling and tighten the upper nut.

(1-6) Remove the paper pattern for installation (5).

(2) For existing ceilings

(2-1) Install the indoor unit temporarily.
Perform step (1-1) in (1) For new ceilings.

(2-2) Adjust the height and position of the unit.
(Refer to "**4. PREPARATIONS BEFORE INSTALLATION-(1)"** and (1-3) in (1) For new ceilings.)

(2-3) Perform steps (1-4), (1-5) in (1) For new ceilings.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

6. REFRIGERANT PIPING WORK

〈**For refrigerant piping of outdoor units, see the installation manual attached to the outdoor unit.**〉
〈Execute heat insulation work completely on both sides of the gas piping and the liquid piping. Otherwise, a water leakage can result sometimes.〉
(When using a heat pump, the temperature of the gas piping can reach up to approximately 120˚C, so use insulation which is sufficiently resistant.)
〈Also, in cases where the temperature and humidity of the refrigerant piping sections might exceed 30˚C or RH80%, reinforce the refrigerant insulation. (20mm or thicker) Condensate may form on the surface of the insulating material.〉
〈Be sure to check the type of R410A refrigerant to be used before doing any work. (Using an incorrect refrigerant will prevent normal operation of the unit.)〉

⚠ CAUTION

- Use a pipe cutter and flare suitable for the type of refrigerant.
- Apply ester oil or ether oil around the flare section before connecting.
- To prevent dust, moisture or other foreign matter from infiltrating the tube, either pinch the end or cover it with tape.
- Do not allow anything other than the designated refrigerant to get mixed into the refrigerant circuit, such as air, etc. If any refrigerant gas leaks while working on the unit, ventilate the room thoroughly right away.

- **Do not mix air or other gas with the specified refrigerant in the refrigeration cycle.**
- **Ventilate the room if refrigerant gas leaks during the work.**
- The outdoor unit is charged with refrigerant.
- Be sure to use both a spanner and torque wrench together, as shown in the drawing, when connecting or disconnecting pipes to/from the unit. **(Refer to Fig. 14)**
- Refer to “Table 3” for the dimensions of flare nut spaces.

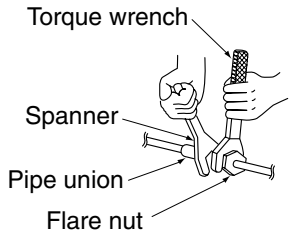

Fig. 14

- When connecting the flare nut, apply ether oil or ester oil only to inner side of the flare, and spin 3-4 times before screwing in. **(Refer to Fig. 15)**
- **Keep all the screw mounting resin parts (e.g., piping presser plates) away from oil.**
  If oil adheres, the strength of the screw mounting resin parts may drop.

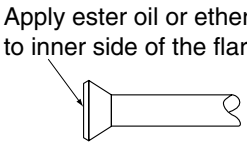

Fig. 15

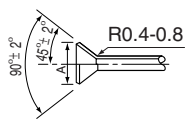

⚠ CAUTION

Over-tightening the flare nut may break it and/or cause the refrigerant to leak.

NOTE

- Use the flare nut included with the unit main body.

Table 3

Pipe size	Tightening torque	Flare dimensions A (mm)	Flare
ϕ 6.4 (1/4”)	14.2 – 17.2N·m (144 – 176 kgf·cm)	8.7 – 9.1	
ϕ 9.5 (3/8”)	32.7 – 39.9N·m (333 – 407 kgf·cm)	12.8 – 13.2	
ϕ 12.7 (1/2”)	49.5 – 60.3N·m (504 – 616 kgf·cm)	16.2 – 16.6	
ϕ 15.9 (5/8”)	61.8 – 75.4N·m (630 – 770 kgf·cm)	19.3 – 19.7	

- Refer to “Table 3” to determine the proper tightening torque.

C : 3P161684-3B

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2

Not recommendable but in case of emergency

You must use a torque wrench but if you are obliged to install the unit without a torque wrench, you may follow the installation method mentioned below.

When you keep on tightening the flare nut with a spanner, there is a point where the tightening torque suddenly increases. From that position, further tighten the flare nut the angle shown below:

Pipe size	Further tightening angle	Recommended arm length of tool
ϕ 6.4 (1/4")	60 to 90 degrees	Approx. 150mm
ϕ 9.5 (3/8")	60 to 90 degrees	Approx. 200mm
ϕ 12.7 (1/2")	30 to 60 degrees	Approx. 250mm
ϕ 15.9 (5/8")	30 to 60 degrees	Approx. 300mm

After the work is finished, make sure to check that there is no gas leak.

- Make absolutely sure to execute heat insulation works on the pipe-connecting section after checking gas leakage by thoroughly studying the following figure and using the attached heat insulating materials for fitting (8) and (9). (Fasten both ends with the clamps (4).) **(Refer to Fig. 16)**
- Wrap the sealing pad (11) only around the insulation for the joints on the gas piping side. **(Refer to Fig. 16)**

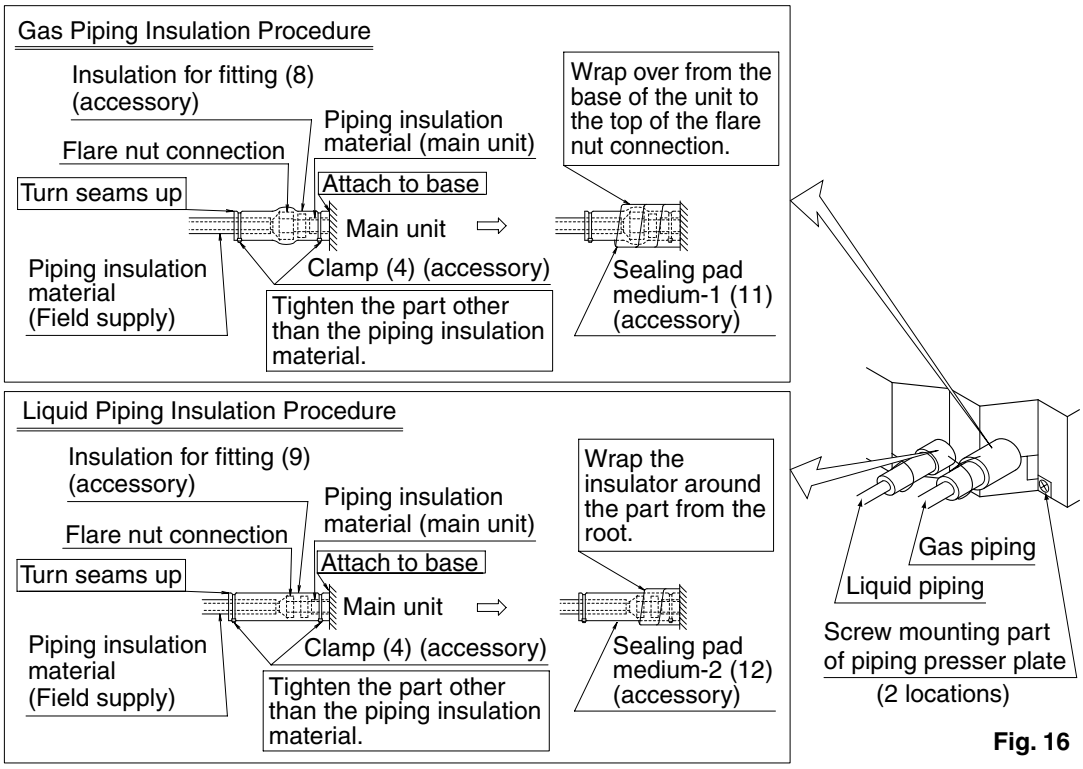

Fig. 16

⚠ CAUTION

For local insulation, be sure to insulate local piping all the way into the pipe connections inside the machine. Exposed piping may cause condensation or burns on contact.

⚠ CAUTION

CAUTION TO BE TAKEN WHEN BRAZING REFRIGERANT PIPING

"Do not use flux when brazing refrigerant piping. Therefore, use the phosphor copper brazing filler metal (BCuP-2: JIS Z 3264/B-Cu93P-710/795: ISO 3677) which does not require flux."

(Flux has extremely harmful influence on refrigerant piping systems. For instance, if the chlorine based flux is used, it will cause pipe corrosion or, in particular, if the flux contains fluorine, it will damage the refrigerant oil.)

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

- Before brazing local refrigerant piping, nitrogen gas shall be blown through the piping to expel air from the piping. If you brazing is done without nitrogen gas blowing, a large amount of oxide film develops inside the piping, and could cause system malfunction.
- When brazing the refrigerant piping, only begin brazing after having carried out nitrogen substitution or while inserting nitrogen into the refrigerant piping. Once this is done, connect the indoor unit with a flared or a flanged connection.
- Nitrogen should be set to 0.02MPa with a pressure-reducing valve if brazing while inserting nitrogen into the piping. **(Refer to Fig. 17)**

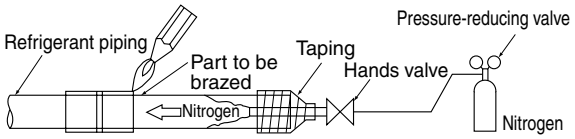

Fig. 17

7. DRAIN PIPING WORK

(1) Rig drain piping

- As for drain work, perform piping in such a manner that water can be drained properly.
- Employ a pipe with either the same diameter or with the diameter larger (excluding the raising section) than that of the connecting pipe (PVC pipe, nominal diameter 25mm, outside diameter 32mm).
- Keep the drain pipe short and sloping downwards at a gradient of at least 1/100 to prevent air pockets from forming.
- If the drain pipe cannot be sufficiently set on a slope, execute the drain raising piping.
- To keep the drain pipe from sagging, space hanging wires every 1 to 1.5m.

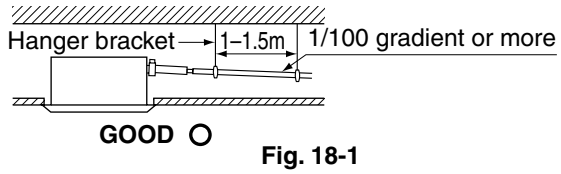

Fig. 18-1

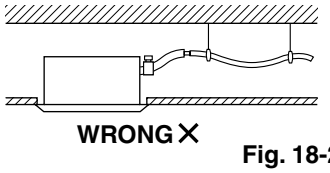

Fig. 18-2

⚠ CAUTION

Water pooling in the drainage piping can cause the drain to clog.

- Use the attached drain hose (1) and Metal clamp (2).
- Insert the drain hose into the drain socket up to the base, and tighten the Metal clamp securely within the portion of a white tape of the hose-inserted tip. Tighten the Metal clamp until the screw head is less than 4mm from the hose.
- Wrap the attached sealing pad (10) over the Metal clamp and drain hose to insulate.
- Make sure that heat insulation work is executed on the following 2 spots to prevent any possible water leakage due to dew condensation.
  - Indoor drain pipe
  - Drain socket

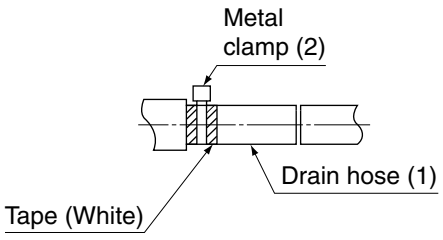

Fig. 19

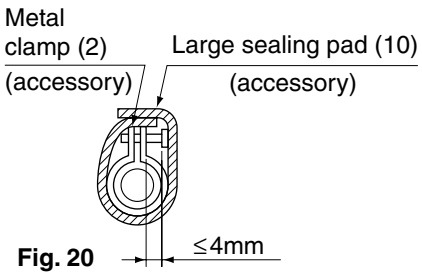

Fig. 20

2

<PRECAUTIONS FOR DRAIN RAISING PIPING>

- Install the drain raising pipes at a height of less than 675mm.
  The drain pump of this unit has a high delivery flow rate. Therefore, the higher the drain raising height is, the lower the sound of draining will be. For this reason, a minimum drain raising height of 300mm is recommended.
- Install the drain raising pipes at a right angle to the indoor unit and no more than 300mm from the unit.

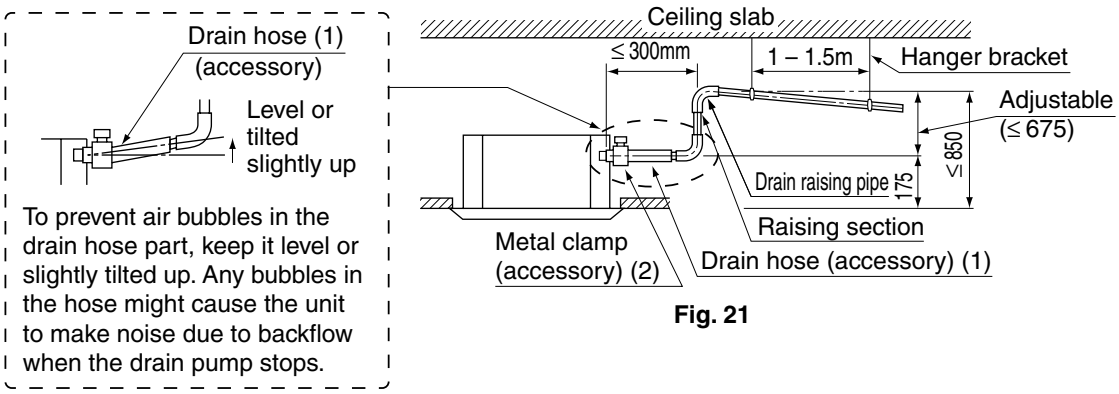

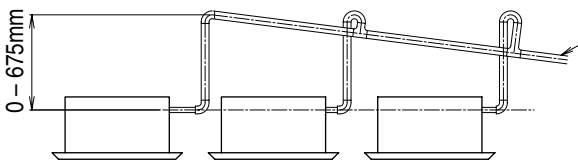

Fig. 21

NOTE

- To ensure no excessive pressure is applied to the included drain hose (1), do not bend or twist when installing. (This may cause leakage.)
- If converging multiple drain pipes, install according to the procedure shown below.

Central drain pipe

The drain pipe should have a downward slope of at least 1/100 to prevent air pockets from forming.

Water accumulating in the drain piping can cause the drain to clog.

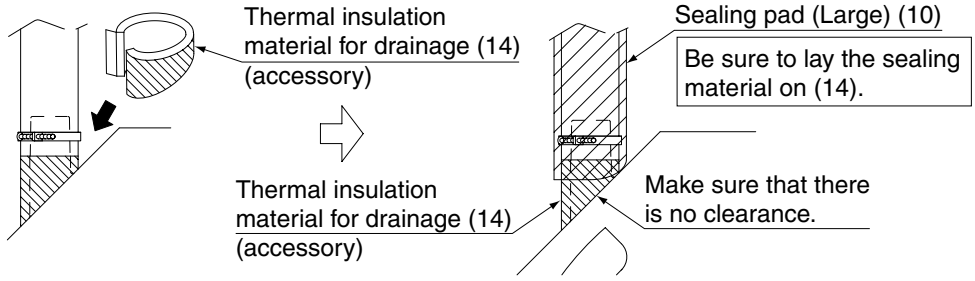

Fig. 22

Select converging drain pipes whose gauge is suitable for the operating capacity of the unit.

(2) After piping work is finished, check if drainage flows smoothly.

WHEN ELECTRIC WIRING WORK IS FINISHED

- Add approximately 1000cc of water slowly from the air outlet and check drainage flow.
- Check drainage flow during COOL running, explained under “12. TEST OPERATION”.
- Refer to the figure on the following after checking the draining of water, and mount the thermal insulation material for drainage (14) and thermal insulate the drain socket.

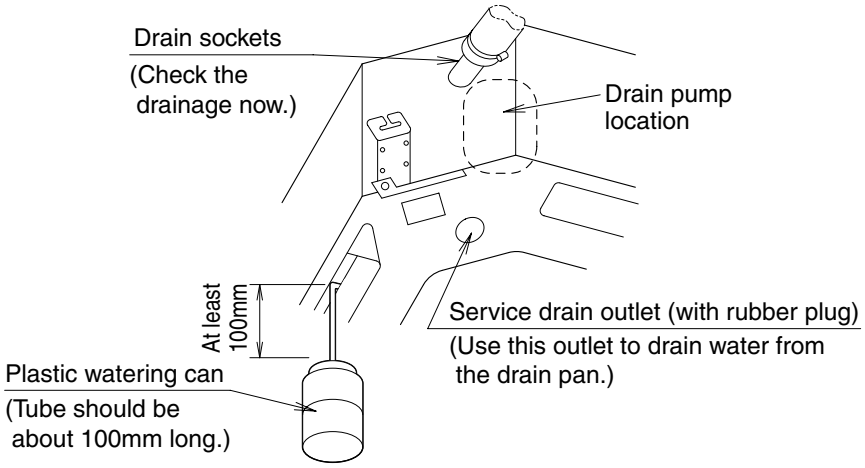

WHEN ELECTRIC WIRING WORK IS NOT FINISHED

⚠ CAUTION

- Electrical wiring work should be done by a certified electrician.
- If someone who does not have the proper qualifications performs the work, perform the following after the test run is complete.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

- Remove the terminal box lid. Connect the single phase power supply (SINGLE PHASE 50Hz 240V) to connections No.1 and No.2 on the terminal block for wiring the units. Do not connect to No.3 of the terminal block for wiring the units. (The drain pump will not operate.) Connect the ground wire firmly. When carrying out wiring work around the terminal box, make sure none of the connectors come undone. Be sure to attach the terminal box lid before turning on the power.
- Put approximately 1000cc of water into the drain pan through the blow-off mouth on the left-hand side of the drain socket. Make sure not to pour water over the drain pump or any electric parts including those of the drain pump.
- When the power is turned on, the drain pump will operate and you can check the draining of water through the transparent part of the drain socket. (The drain pump will stop automatically in 10 minutes.)
  After checking the draining of water, mount the thermal insulation material for drainage (14) and thermal insulate the drain socket.
- After confirming drainage **(Fig.23, Fig.24)**, turn off the power and remove the power supply.
- Attach the terminal box lid as before.

<Adding water through air discharge outlet>
[Method of adding water]

Fig. 23

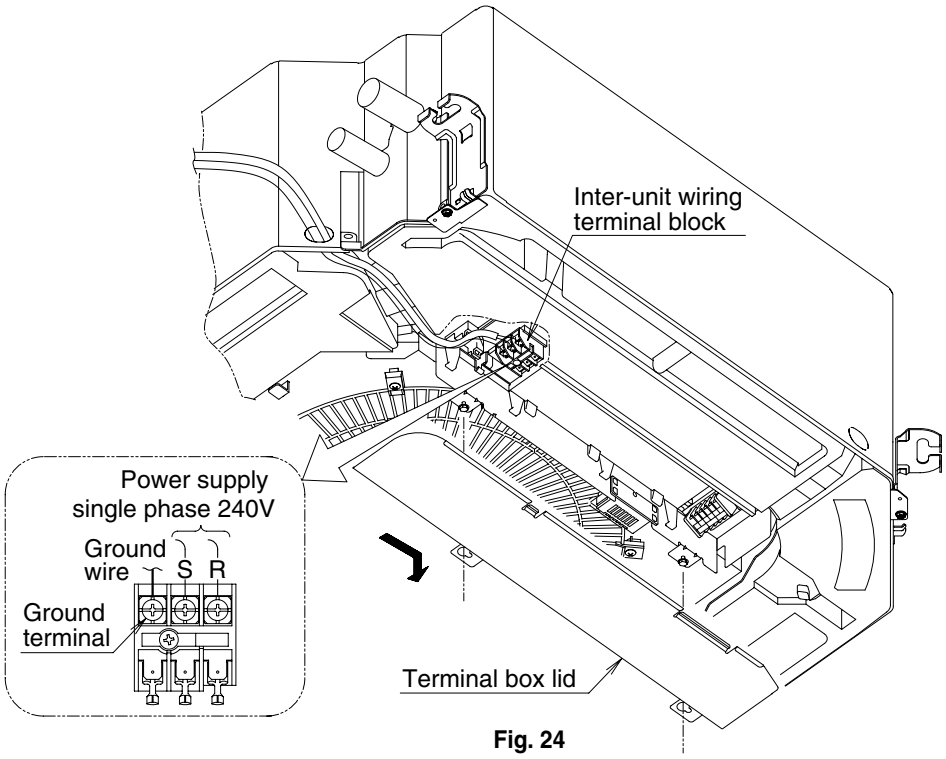

Fig. 24

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

⚠ CAUTION

Drain piping connections
Do not connect the drain piping directly to sewage pipes that smell of ammonia. The ammonia in the sewage might enter the indoor unit through the drain pipes and corrode the heat exchanger.

8. ELECTRIC WIRING WORK

8-1 General instructions

- All field supplied parts and materials and electric works must conform to local codes.
- Use copper wire only.
- For electric wiring work, refer to also “WIRING DIAGRAM” attached to the unit body.
- For remote controller wiring details, refer to the installation manual attached to the remote controller.
- All wiring must be performed by an authorized electrician.
- A circuit breaker capable of shutting down power supply to the entire system must be installed.
- Refer to the installation manual attached to the outdoor unit for the size of power supply electric wire connected to the outdoor unit, the capacity of the circuit breaker and switch, and wiring instructions.
- Be sure to ground the air conditioner.
- Do not connect the ground wire to gas pipes, plumbing pipes, lightning rods, or telephone ground wires.
  - Gas pipes: might cause explosions or fire if gas leaks.
  - Plumbing: no grounding effect if hard vinyl piping is used.
  - Telephone ground wires or lightning rods: might cause abnormally high electric potential in the ground during lighting storms.

8-2 Electrical characteristics

Units				Power supply		Fan motor	
Model	Hz	Volts	Voltage range	MCA	MFA	kW	FLA
FXFQ25PVE	50	220-240	Max. 264 Min. 198	0.3	15	0.056	0.2
FXFQ32PVE				0.3	15	0.056	0.2
FXFQ40PVE				0.3	15	0.056	0.2
FXFQ50PVE				0.3	15	0.056	0.2

MCA: Min. Circuit Amps (A) MFA: Max. Fuse Amps (A)
kW: Fan Motor Rated Output (kW) FLA: Full Load Amps (A)

3P161684-3B

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

8-3 Specifications for field supplied fuses and wire

Model	Power supply wiring			Remote controller wiring Transmission wiring	
	Field fuses	Wire	Size	Wire	Size
FXFQ25·32·40·50PVE	15A	H05VV-U3G	Wire size must comply with local codes.	Sheathed wire (2 wire)	0.75 - 1.25 mm^2
FXFQ63PVE					
FXFQ80·100PVE					
FXFQ125PVE					

Allowable length of transmission wirings and remote controller wiring are as follows.
(1) Outdoor unit - Indoor unit:
Max. 1000m (Total wiring length: 2000m)
(2) Indoor unit - Remote controller
Max. 500m

NOTE
1. Shows only in case of protected pipes. Use H07RN-F in case of no protection.
2. Vinyl cord with sheath or cable (Insulated thickness : 1mm or more)

9. WIRING EXAMPLE AND HOW TO SET THE REMOTE CONTROLLER

9-1 How to connect wirings

Connection of wiring between units, ground wire and for the remote controller cord (Refer to Fig. 25)

- Wiring the units and ground wire
  Remove the terminal box lid and connect wires of matching number to the terminal block for wiring the units (3 P) inside. And connect the ground wire to the ground terminal. In doing this, pull the wires inside through the hole and fix the wires securely with the included clamp (4) (2 points).
- Remote controller cords (not neccessary for slave unit of simultaneous operation system)
  Remove the terminal box lid and pull the wires inside through the hole and connect to the terminal block for remote controller (6 P). (no polarity) Securely fix the remote controller cord with the included clamp (4) (2 points).
- After connection, attach sealing pad (13).
- Be sure to attach it to prevent the infiltration of water from the outside.

[PRECAUTIONS]

1. Use round crimp-style terminals for connecting wires to the power supply terminal block.
If unavailable, observe the following points when wiring.
  - Do not connect wires of different gauge to the same power supply terminal.
    (Looseness in the connection may cause overheating.)
  - Use the specified electric wire. Connect the wire securely to the terminal. Lock the wire down without applying excessive force to the terminal. (Tightening torque: 131N·cm ±10 %)

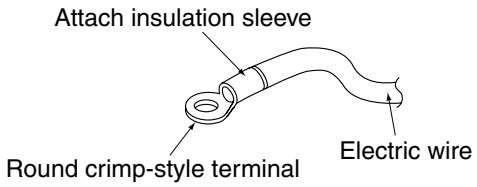

Fig. 25

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2. **Tightening torque for the terminal screws.**
   - Use the correct screwdriver for tightening the terminal screws. If the blade of screwdriver is too small, the head of the screw might be damaged, and the screw will not be properly tightened.
   - If the terminal screws are tightened too hard, screws might be damaged.
   - Refer to the table below for the tightening torque of the terminal screws.

Terminal	Size	Tightening torque
Terminal block for remote controller (6P)	M3.5	0.79 – 0.97N·m
Power supply terminal block (3P)	M4	1.18 – 1.44N·m
Ground terminal	M4	1.44 – 1.94N·m

When none are available, follow the instructions below.

3. Do not connect wires of different gauge to the same grounding terminal.

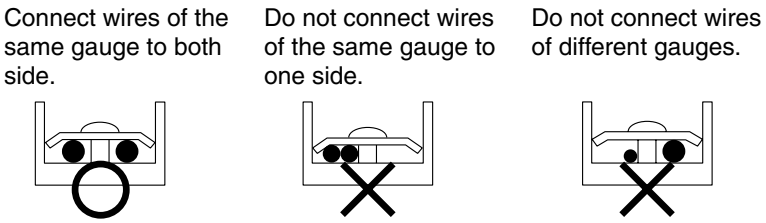

Fig. 26

Looseness in the connection may deteriorate protection.

4. Outside of the unit, keep transmission wiring at least 50mm away from power supply wiring. The equipment may malfunction if subjected to electrical (external) noise.
5. For remote controller wiring, refer to the “INSTALLATION MANUAL OF REMOTE CONTROLLER.” attached to the remote controller.
6. **Never connect power supply wiring to the terminal block for remote controller. A mistake of the sort could damage the entire system.**
7. Use only specified wire and tightly connect wires to terminals. Be careful wires do not place external stress on terminals. Keep wiring in neat order and so as not to obstruct other equipment such as popping open the terminal box lid. Make sure the lid closes tight. Incomplete connections could result in overheating, and in worse case, electric shock or fire.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

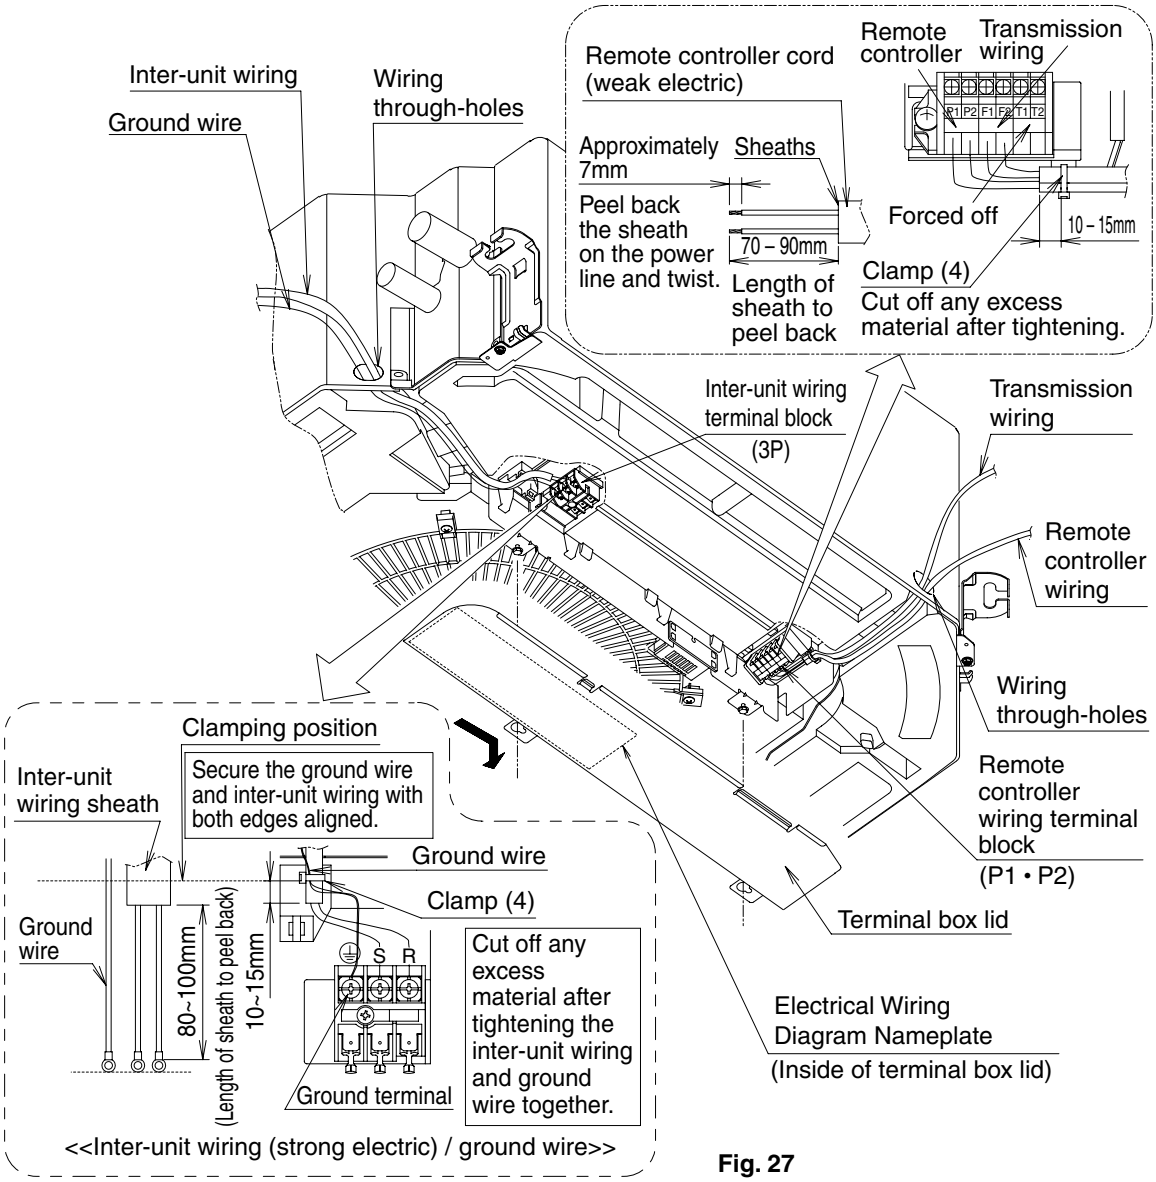

Fig. 27

Observe the notes mentioned below when wiring to the terminal block for wiring the units.

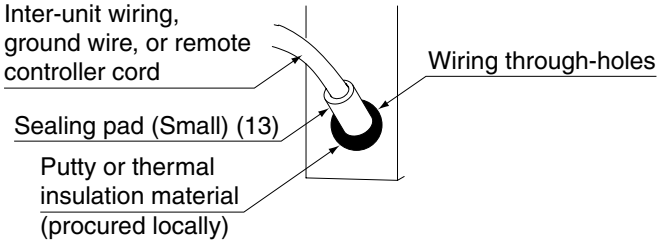

⚠ CAUTION

- When clamping wiring, use the included clamping material to prevent outside pressure being exerted on the wiring connections and clamp firmly. When doing the wiring, make sure the wiring is neat and does not cause the terminal box lid to stick up, then close the cover firmly.
- When attaching the terminal box lid, make sure you do not pinch any wires.
- After all the wiring connections are done, fill in any gaps in the through holes with putty or insulation (procured locally) to prevent small animals and insects from entering the unit from outside. (If any do get in, they could cause short circuits in the terminal box.)
- Outside the machine, separate the weak wiring (remote controller cord) and strong wiring (interunit, ground, and other power wiring) at least 50 mm so that they do not pass through the same place together. Proximity may cause electrical interference, malfunctions, and breakage.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2

Processing method of wiring through-holes

9-2 Wiring example

- Fit the power supply wiring of each unit with a switch and fuse as shown in the drawing.

COMPLETE SYSTEM EXAMPLE (3 systems)

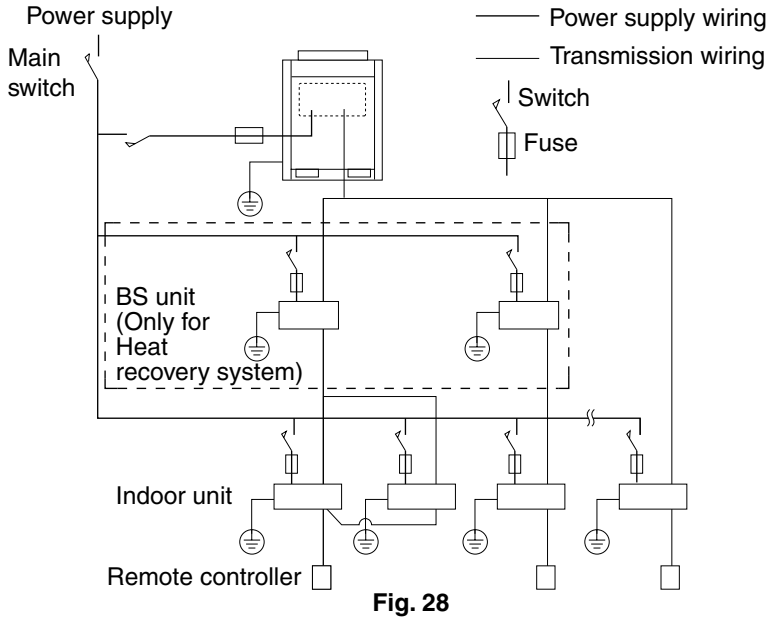

Fig. 28

1. When using 1 remote controller for 1 indoor unit. (Normal operation)

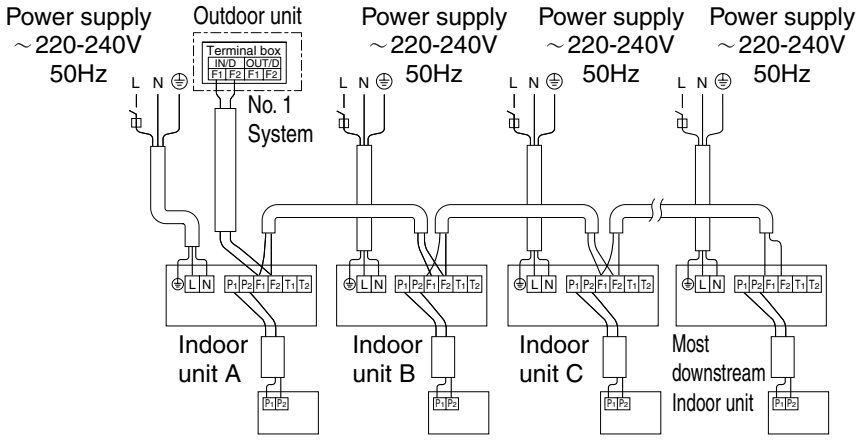

Fig. 29

3P161684-3B

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2. For group control or use with 2 remote controllers

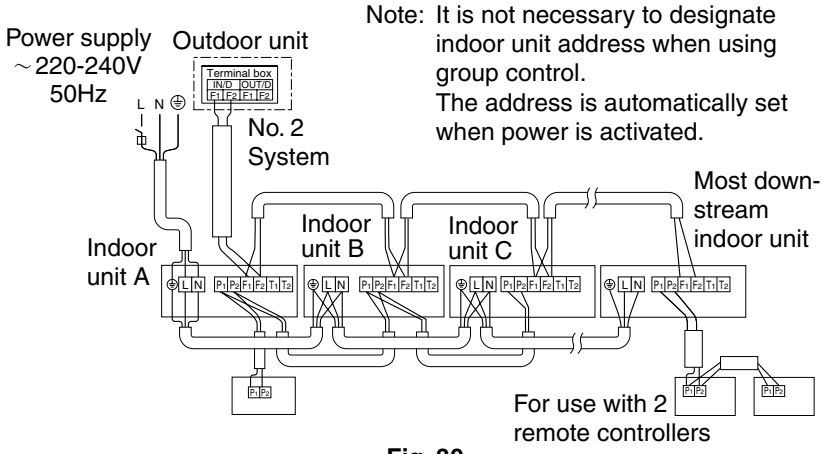

Fig. 30

3. When including BS unit

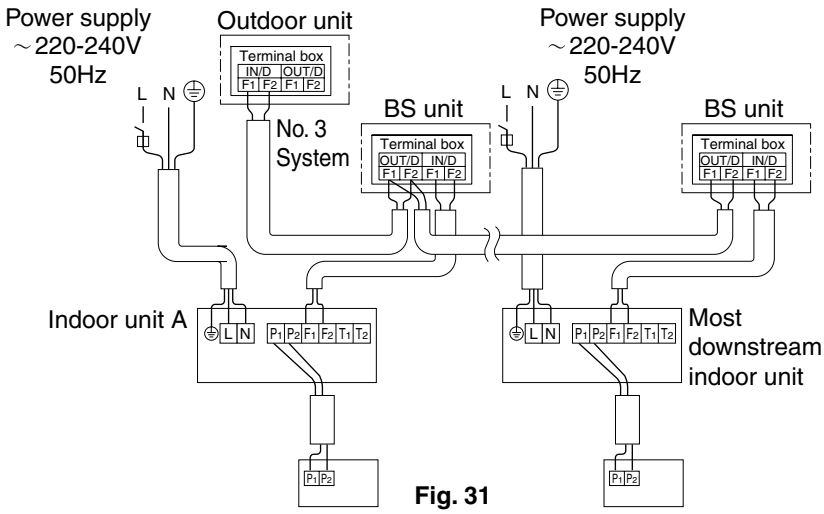

Fig. 31

[PRECAUTIONS]

1. A single switch can be used to supply power to units on the same system. However, branch switches and branch circuit breakers must be selected carefully.
2. Do not ground the equipment on gas pipes, water pipes or lightning rods, or crossground with telephones. Improper grounding could result in electric shock.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2

9-3 Control by 2 remote controllers (controlling 1 indoor unit by 2 remote controllers)

• When using 2 remote controllers, one must be set to “MAIN” and the other to “SUB”.

MAIN/SUB CHANGEOVER

(1) Insert a ⊖ screw driver into the recess between the upper and lower part of remote controller and, working from the 2 positions, pry off the upper part. (The remote controller PC board is attached to the upper part of remote controller.) **(Refer to Fig. 32)**

(2) Turn the **main/sub changeover** switch on one of the two remote controller PC boards to “S”. (Leave the switch of the other remote controller set to “M”.) **(Refer to Fig. 33)**

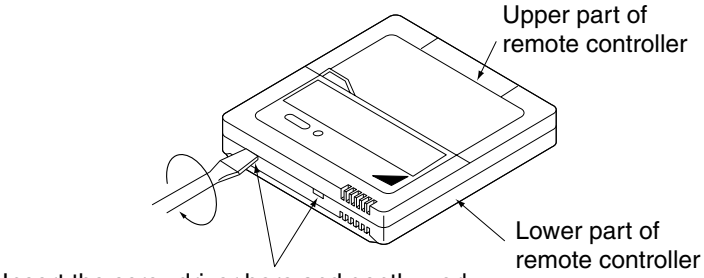

Fig. 32

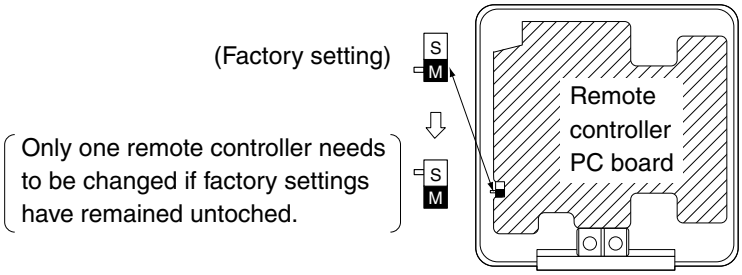

Fig. 33

Wiring Method (See “ELECTRIC WIRING WORK”)

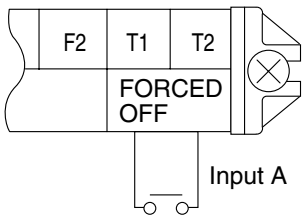

(3) Remove the terminal box lid

(4) Add remote control 2 (slave) to the terminal block for remote controller (P1, P2) in the terminal box. (There is no polarity.) (Refer to Fig. 30 and 8-3.)

9-4 Computerised control (forced off and on/off operation)

(1) Wire specifications and how to perform wiring

• Connect the input from outside to terminals T1 and T2 of the terminal block for remote controller.

Wire specification	Sheathed vinyl cord or cable (2 wire)
Gauge	0.75 - 1.25 mm^2
Length	Max. 100 m
External terminal	Contact that can ensure the minimum applicable load of 15 V DC, 10 mA.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

(2) Actuation
- The following table explains FORCED OFF and ON/OFF OPERATIONS in response to Input A.

FORCED OFF	ON/OFF OPERATION
Input “ON” stops operation (impossible by remote controllers.)	Input OFF → ON turns ON unit.
Input OFF enables control by remote controller.	Input ON → OFF turns OFF unit.

(3) How to select FORCED OFF and ON/OFF OPERATION
- Turn the power on and then use the remote controller to select operation.

9-5 Centralized control
- For centralized control, it is necessary to designate the group No. For details, refer to the manual of each optional controllers for centralized control.

10. INSTALLATION OF THE DECORATION PANEL

Caution:
With a wireless remote controller, field setting and test operation cannot be performed without attaching the decoration panel.
<If performing a test run without attaching the decoration panel, read “11. FIELD SETTING” and “12. TEST OPERATION” first.>
Refer to the installation manual attached to the decoration panel.
After installing the decoration panel, ensure that there is no space between the unit body and decoration panel.

11. FIELD SETTING

⚠ CAUTION

When performing field setting or test operation without attaching the decoration panel, do not touch the drain pump. This may cause electric shock.

- Check that the outdoor unit has been wired properly.

Make sure the terminal box lids are closed on the indoor and outdoor units.
Field setting must be made from the remote controller and in accordance with installation conditions.
- Setting can be made by changing the “Mode No.”, “FIRST CODE NO.” and “SECOND CODE NO.”.
- For setting procedures and instructions, see “Field settings” provided with the remote controller.

11-1 Setting ceiling height
- Select the SECOND CODE NO. that corresponds to the ceiling height “Table 4”. (SECOND CODE NO. is factory set to “01”.)

Table 4

		FXFQ - PVE		Mode No. Note) 1	FIRST CODE NO.	SECOND CODE NO.
		25 · 32 · 40 · 50 · 63 · 80 type	100 · 125 type			
Ceiling height (m)	Standard · All round outlet	≤ 2.7	≤ 3.2	13 (23)	0	01
	High ceiling 1	2.7 - 3	3.2 - 3.6			02
	High ceiling 2	3 - 3.5	3.6 - 4.2			03

Note:
1. “Mode No.” setting is done in a batch for the group. To make or confirm settings for an individual unit, set the internal mode number in parentheses.
2. The figure of the ceiling height is for the all round outlet. For the settings for four-direction (part of corner closed off), three-direction and two-direction outlets, see the installation manual and technical guide supplied with the separately sold closure material kit.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2

11-2 Setting of air direction

- See the installation manual included with the sealing material of air discharge outlet kit, sold separately and technical guide, for ceiling height settings for two and three-direction air discharge. (The SECOND CODE NO. is factory set to “01” (all round outlet) before shipping.)

11-3 Settings for Mounting Options

- When installing an option sold separately, refer to the installation manual provided to the option.

11-4 Setting air filter sign

- Remote controllers are equipped with liquid crystal display air filter signs to display the time to clean air filters.
- Change the SECOND CODE NO. according to “Table 5” depending on the amount of dirt or dust in the room.
  (SECOND CODE NO. is factory set to “01” for filter contamination-light.)

Table 5

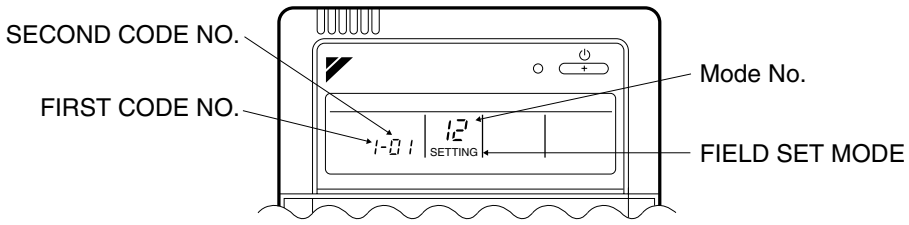

Setting	Spacing time of display air filter sign (long life type)	Mode No.	FIRST CODE NO.	SECOND CODE NO.
Air filter contamination-light	Approx. 2500 hrs	10 (20)	0	01
Air filter contamination-heavy	Approx. 1250 hrs			02
No Display			3	

Note:
1. “Mode No.” setting is done in a batch for the group. To make or confirm settings for an individual unit, set the internal mode number in parentheses.
2. Make settings for “No Display” in cases where no cleaning display is required, e.g., at the time of regular maintenance servicing.

- The air conditioner is provided with a long life filter as a standard accessory. Explain to the customer the necessity of cleaning the filter periodically along with the set time for filter cleaning for the prevention of clogging.

When using wireless remote controllers

- When using wireless remote controllers, wireless remote controller address setting is necessary. Refer to the installation manual attached to the wireless remote controller for setting instructions.

- Set the remote controller to the field set mode. For details, refer to the “HOW TO SET IN THE FIELD”, in the remote controller manual.
- When in the field set mode, select mode No. 12, then set the first code (switch) No. to “1”. Then set second code (position) No. to “01” for FORCED OFF and “02” for ON/OFF OPERATION. (FORCED OFF at factory set)

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

12. TEST OPERATION

Refer to the installation manual of the outdoor unit.

- The operation lamp of the remote controller will flash when an malfunction occurs. Check the malfunction code on the liquid crystal display to identify the point of trouble. An explanation of malfunction codes and the corresponding trouble is provided in “CAUTION FOR SERVICING” of the indoor unit.
  If any of the items in Table 6 are displayed, there may be a problem with the wiring or power, so check the wiring again.

Table 6

Remote control display	Content
“Concentrated Management” is lit up	• There is a short circuit at the FORCED OFF terminals (T1, T2).
“U4” is lit up “UH” is lit up	• The power on the outdoor unit is off. • The outdoor unit has not been wired for power supply. • Incorrect wiring for the transmission wiring and / or FORCED OFF wiring.
No display	• The power on the indoor unit is off. • The indoor unit has not been wired for power supply. • Incorrect wiring for the remote controller wiring, the transmission wiring, and / or the FORCED OFF wiring.

- If the decoration panel is installed on the indoor unit during the test run, check the operation of the swing flap on the panel.
- In order to protect the indoor unit, instruct the customer not to operate the air conditioner until the interior work is completed if the interior work has not been finished at the end of the test run.
  (If the air conditioner is operated, substances discharged from the paint, adhesive, etc. can contaminate the indoor unit, and they may cause splashing or leakage of water.)

NOTE

- After the test run is finished, check the items listed in “**2. Items to be checked at time of delivery**”.

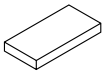

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

BYCP125K-W1 — Decoration Panel

1. BEFORE INSTALLATION

1. PRECAUTIONS
- Refer also to the installation manual attached to the indoor unit.

2. ACCESSORIES
- Installation manual.

3. NOTE TO INSTALLER
- Be sure to instruct the customer how to properly operate the system showing him/her the attached operation manual.

2. PREPARATION OF DECORATION PANEL

<<For this unit, you are able to select air flow directions. To discharge air in 2 or 3 directions, it is necessary to purchase optional blocking pad kit.>>

HANDLING OF DECORATION PANELS
- Never place the panel facing down nor lean it against a wall nor leave it on a projecting object.
- Never touch or put pressure on the swing flap.
  (The swing flap may malfunction)

(1) Remove the suction grille from the decoration panel.

1 Press the lever on the suction grille and lift the lever side. **(Refer to Fig. 1)**

2 Detach the suction grille from the decoration panel by lifting the grille up approximately 45 degrees. **(Refer to Fig. 2)**

3 Remove the transporting cardboard (in 4 locations) from the main unit. **(Refer to Fig. 3)**

4 Remove the transporting tape (in 4 locations) on the back of the suction grille. **(Refer to Fig. 4)**

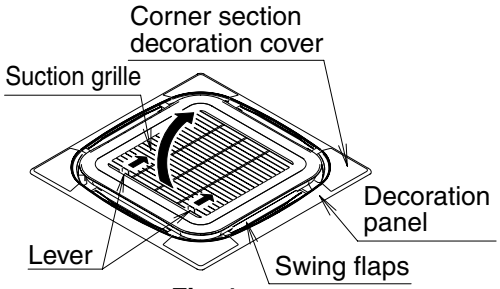

Fig. 1

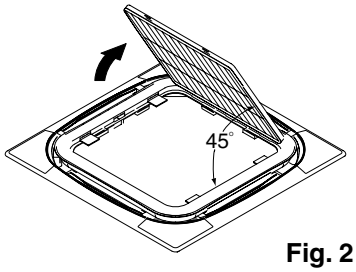

Fig. 2

(2) Remove the corner section decoration cover.
- Lift the four corner decoration covers in the direction of the arrow and remove. **(Refer to Fig. 5)**

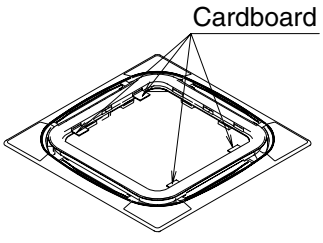

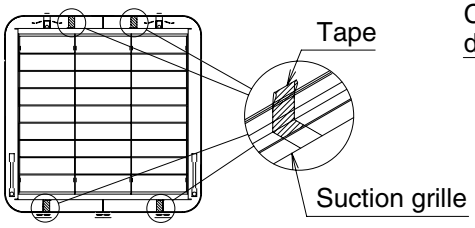

Fig. 3

Rear side of the suction grille

Fig. 4

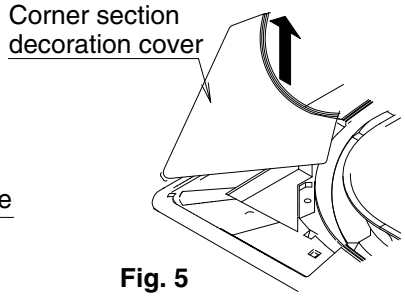

Fig. 5

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2

3. INSTALLATION OF THE DECORATION PANEL TO THE INDOOR UNIT BODY

<<Refer to the installation manual attached to the indoor unit for the installation of the indoor unit.>>

(1) Match the “PIPING SIDE” and “DRAIN SIDE” displays on the decoration panel with the position of the piping section and drain section on the indoor unit.

(2) Install the decoration panel

1 Temporarily install the decoration panel to the indoor unit by hanging the temporary latch of the decoration panel to the hook of the indoor unit body. (2 locations)

2 Hook the four mounting brackets on the corner sections of the decoration panels onto the hooks around the main indoor unit body.
(Make sure at this time that the swing motor lead wire does not get caught between the decoration panel and the main unit.)

3 Screw all 4 hexagon head screws located right beneath the latches in approximately 5 mm. (Panel will rise)

4 Adjust the decoration panel by turning it to the arrowed direction in Fig. 6 so that the ceiling opening is completely covered.

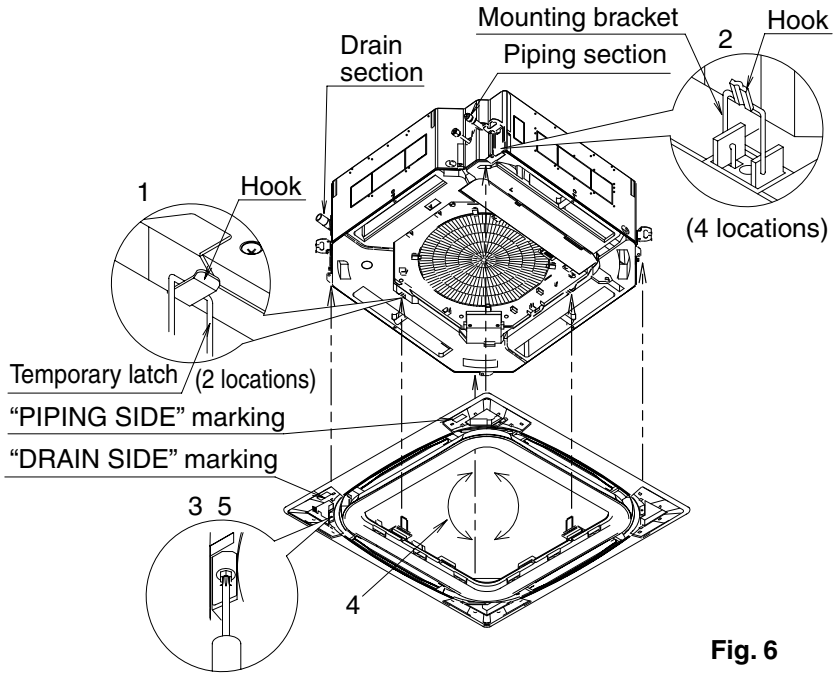

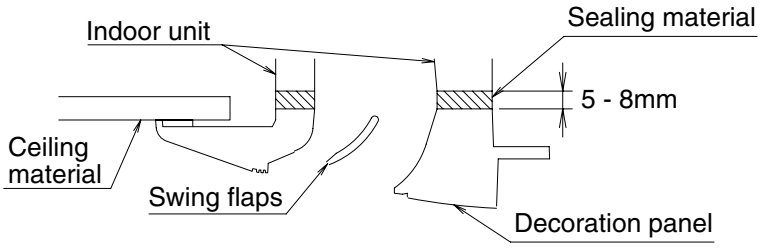

Fig. 6

5 Tighten the screws until the thickness of the sealing material between the decoration panel and the indoor unit body reduces to 5-8 mm.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

[PRECAUTIONS]

- Inproper screwing of the screws may cause the troubles shown in Fig. 7 Screw properly.

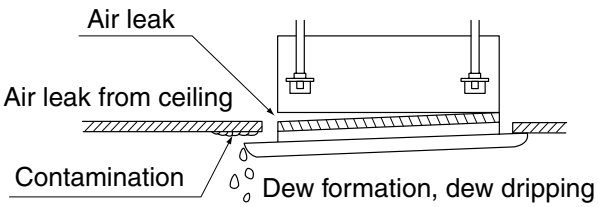

Fig. 7

- If gap is still left between the ceiling and the decoration panel after screwing the screws, readjust the indoor unit body height. **(Refer to Fig. 8)**

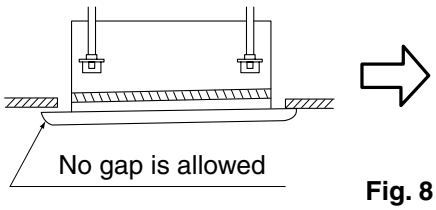

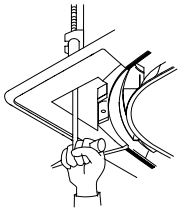

Fig. 8

Adjustment of the indoor unit body height from the holes in the corner of the decoration panel is possible if the indoor unit is kept leveled and the drain piping, etc. is unaffected.

(3) Wiring of the decoration panel **(Refer to Fig. 9)**

6 Remove the electric components box lid.

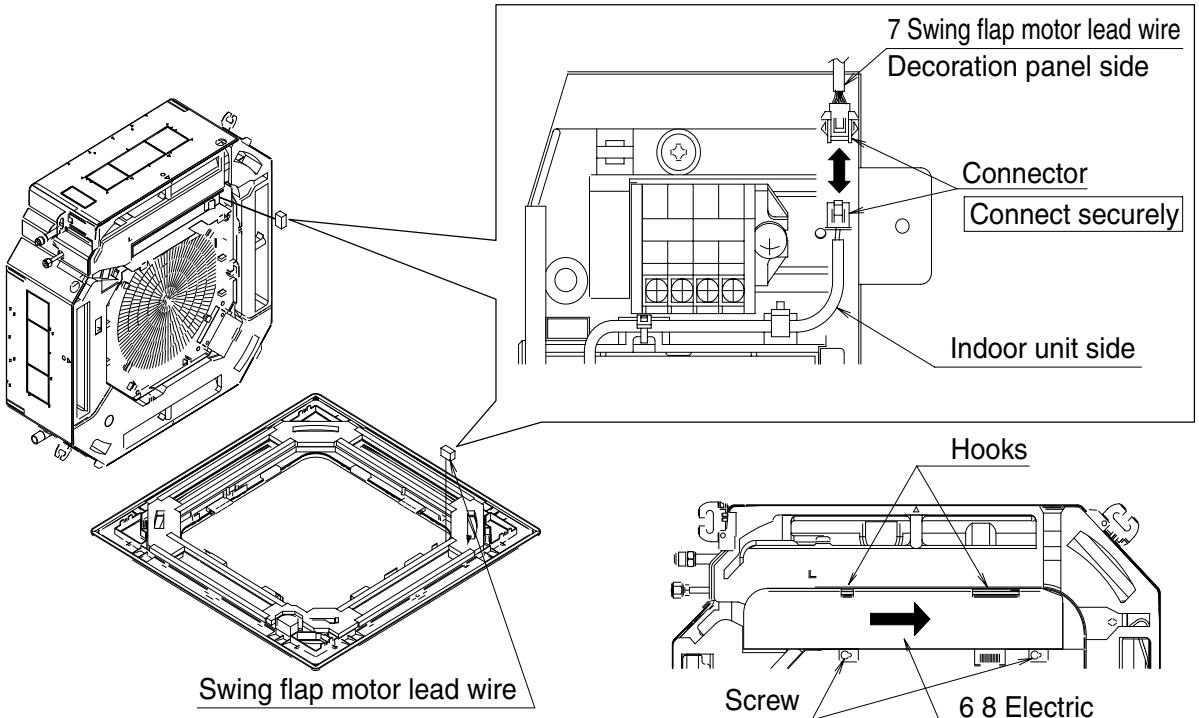

7 Connect the connectors for swing flap motor lead wire installed on the decoration panel.

8 Replace the electric components box lid reversing the procedure to remove it.

Make sure that the swing flap motor lead wire is not caught between the electric components box and its lid, and between the indoor unit body and the decoration panel.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2

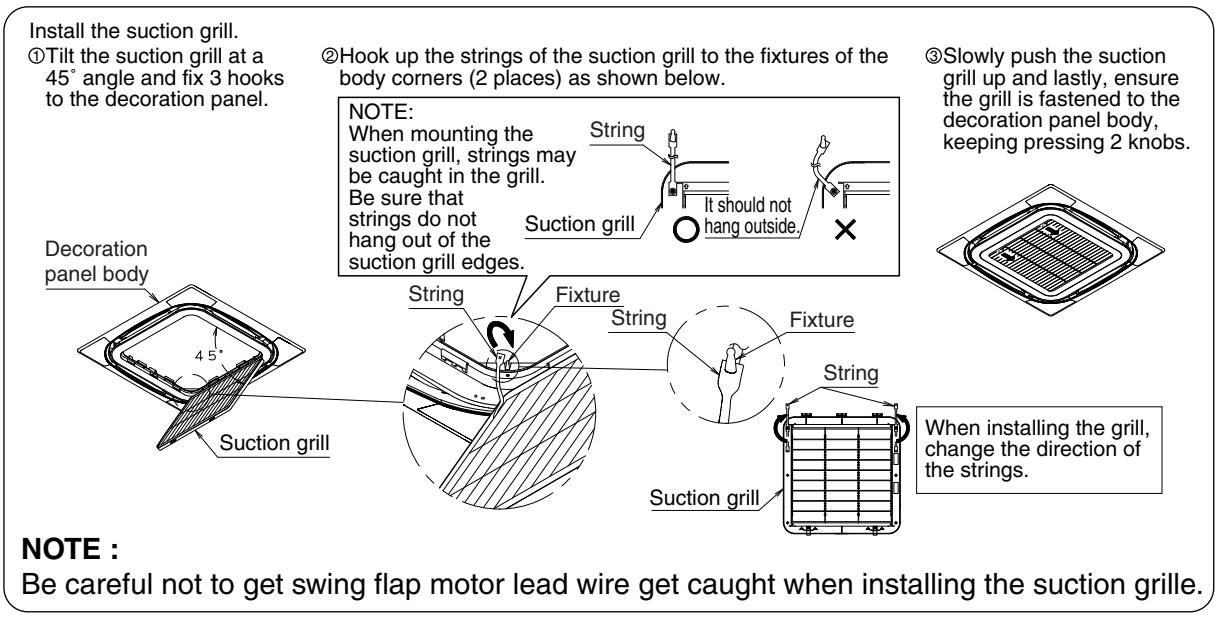

<Wiring Diagram>
(The orientation of the indoor unit is changed for purposes of description.)

Loosen the two screws, slide the cover in the direction of the arrows, and disengage from the hooks.

Fig. 9

4. INSTALLATION OF SUCTION GRILLE AND SERVICE COVER

(1) Install the suction grille
Install by reversing the procedure shown in “PREPARATION OF DECORATION PANEL”.
It is possible to install the suction grille in 4 directions by turning the suction grille.
Change the direction when adjusting the direction of the suction grille of multiple units or in meeting customers’ demands.

NOTE :
Be careful not to get swing flap motor lead wire get caught when installing the suction grille.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

(2) Install the corner section decoration cover.

1 Attach the string of the corner section decoration cover to the pin of the decoration panel. **(Refer to Fig. 10)**

2 Install the corner section decoration cover over the decoration panel. **(Refer to Fig. 11)**

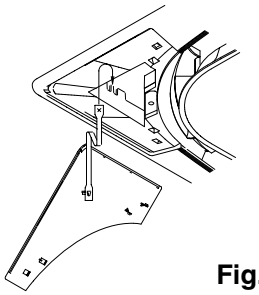

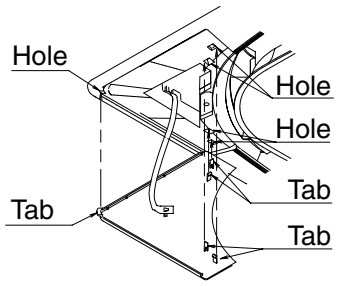

Fig. 10

Attach by inserting the five tabs on the corner section decoration cover into the holes on the decoration panel.

Fig. 11

KDBH55K160(F) — Sealing Material of Air Discharge Outlet

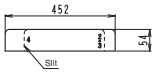

KDBH55K160

Dimensions

Unit:mm

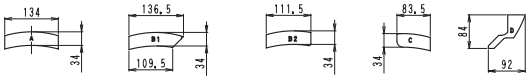

Sealing materials for long air outlets (Polyethylene foam t10): 2 pieces

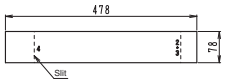

Sealing materials for horizontal blades (Polyethylene foam t10): 8 pieces

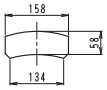

Sealing materials for air outlets at the corner (Polyethylene foam t10): 1 piece for each

Tape for sealing materials for long air outlets (Non-woven fabric t0.6): 2

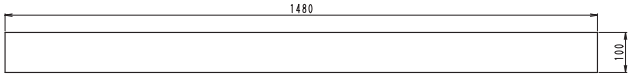

Tape for sealing materials for air outlets at the corner (Non-woven fabric t0.6): 3

Tape for sealing materials for air outlets at the corner (Non-woven fabric t0.6): 1

Side insulation plate (NB foam t10) : 2

Antisweat material (Flocking tape): See right

Applicable part number	Q'ty and colour
KDBH55K160F	4, grey
KDBH55K160	4 for each, Dark grey or black

Antisweat material (Flocking tape): See right

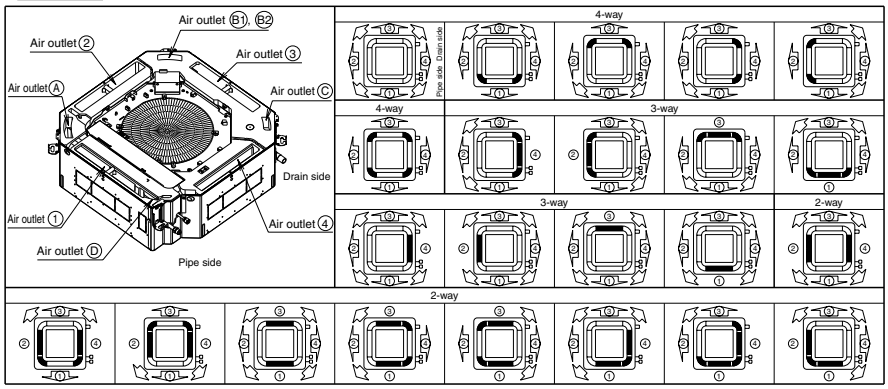

Applicable part number	Q'ty and colour
KDBH55K160F	4, grey
KDBH55K160	4 for each, Dark grey or black

1 Blow Direction Selection and Sealing Material Mounting

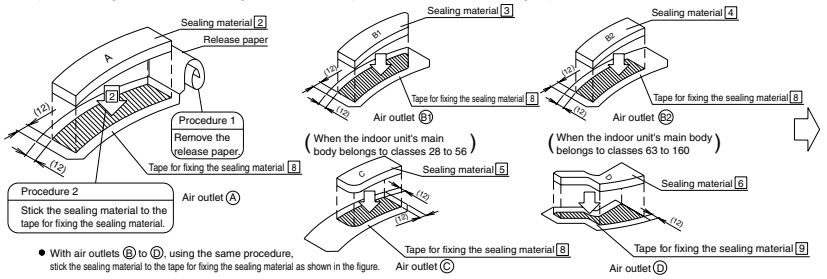

(1) Blow direction selection

- Depending on the installation location, select a blow direction from the table below. For the setting position number, refer to 4 Field Setting.
  For the selection of installation location, refer to the installation manual attached to the indoor unit's main body.

Precautions Blow direction patterns other than those shown in the figure below cannot be selected. (Condensation may occur.)

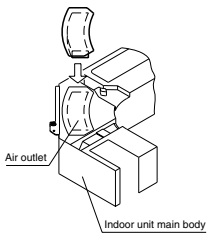

(2) Matching with the corner air outlets Ⓐ to Ⓓ that are to be blocked, stick the sealing material to the tape for fixing the sealing material.
(Stick the sealing material so that the sealing material comes to the positions shown in the schematic diagram.)

- With air outlets Ⓑ to Ⓓ, using the same procedure, stick the sealing material to the tape for fixing the sealing material as shown in the figure.

(3) Stick the sealing material that was prepared in (2) to the air outlet of indoor unit main body.

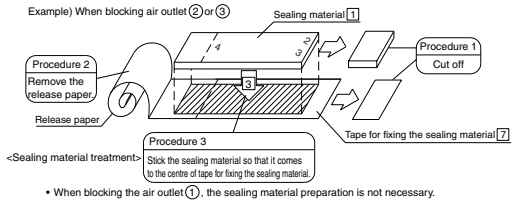

Precautions

- The sealing material has a directional property. Be sure to stick the sealing material to the tape for fixing the sealing material so that the printed number of outlet to be blocked becomes visible.
- When blocking both the air outlet 1 and air outlet Ⓓ, start the sticking of sealing material with the air outlet Ⓓ.

(4) Matching the longitudinal air outlet numbered 1 to 4 that are to be blocked, prepare the sealing material and tape for fixing the sealing material.

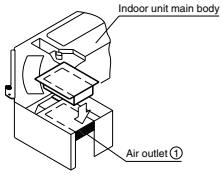

- Cut both the sealing material and tape for fixing the sealing material along the perforation (dotted line).
- Stick the sealing material to the tape for fixing the sealing material.
  (Stick so that the sealing material comes to the centre of tape for fixing the sealing material.)

Example) When blocking air outlet 2 or 3

- When blocking the air outlet 1, the sealing material preparation is not necessary.

(5) Stick the sealing material that was prepared in (4) to the air outlet of indoor unit main body.

<Mounting to air outlet>

Precautions The sealing material has a directional property. Be sure to stick the sealing material to the tape for fixing the sealing material so that the printed number of outlet to be blocked becomes visible.

J : 1P177350A

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

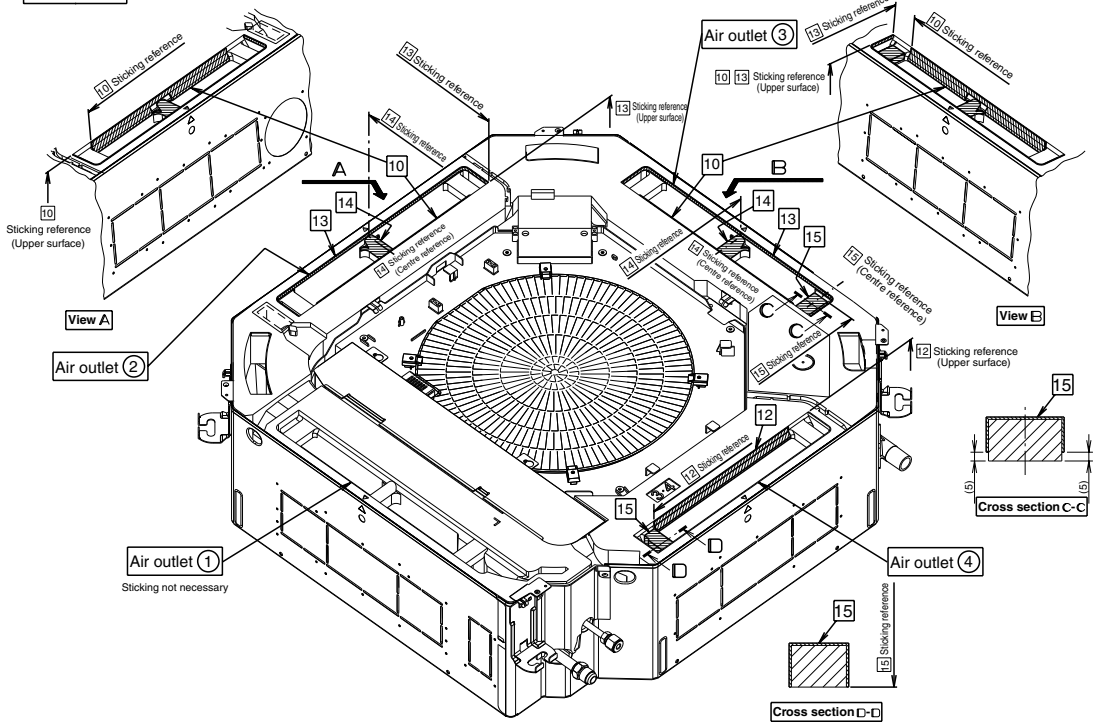

❷ Sticking of Absorbent to Air Outlet

● Stick the absorbent indicated in the table below to the air outlet that was not blocked in ❶ according to the procedure shown in the figure below.

	Classes ~80	Classes 100~
Air outlet ①	——	——
Air outlet ②	Absorbent 10 13 14 Total 3 pieces	——
Air outlet ③	Absorbent 10 13 14 15 Total 4 pieces	Absorbent 11 13 14 Total 3 pieces
Air outlet ④	Absorbent 12 15 Total 2 pieces	——

Precautions
- If the sticking of absorbent is omitted, condensation may occur.
- To positions where the absorbent is already stuck, the sticking of absorbent is not necessary.

Classes ~80

Classes 100~

continuted on back side

J : 1P177350A

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

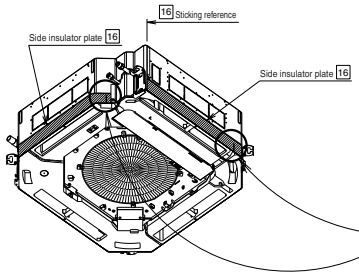

2

③ Sticking of Insulator to Indoor Unit Main Body

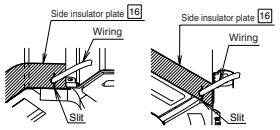

● For safety, be sure to shut off power supply before starting the insulator sticking operation, decoration panel mounting operation, and connecting of connectors for swinging.

Precautions If the sticking of insulator is omitted, condensation may occur.

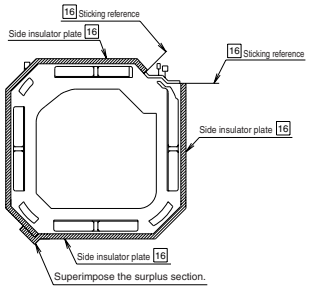

● Stick the side insulator plate 16 according to the figure below.

For a wiring takeoff point with two sections, make a slit on the side insulator plate 16 as shown in the figure below, then route the wiring.

Wiring takeoff point

Superimpose the surplus section.

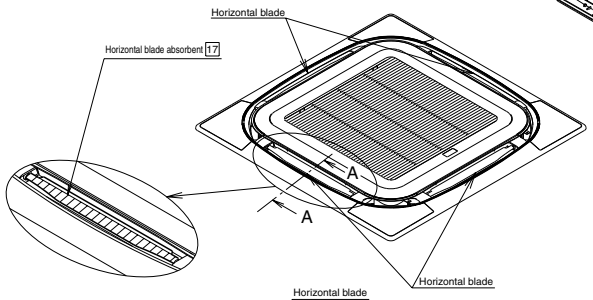

④ Sticking of Absorbent to Panel Horizontal Blade

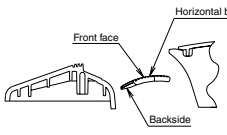

● Perform the operation on soft cloth to prevent damage to the panel.
● Perform sticking for the horizontal blades of all air outlets.
● Do not apply force to the horizontal blade. (Application of force may lead to horizontal blade swing failure.)

● According to the figure below, stick the horizontal blade absorbent 17 and 18 as well as the horizontal blade sealing pad 19.
(With KDBH55K160, stick the horizontal blade absorbent with matching blade colour.)

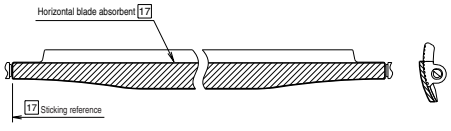

Precautions When the sticking of absorbent and sealant is omitted, condensation may occur.

① Stick the horizontal blade absorbent 17 in line with the blade shape to the front face of the horizontal blade.

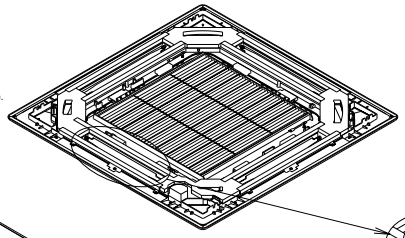

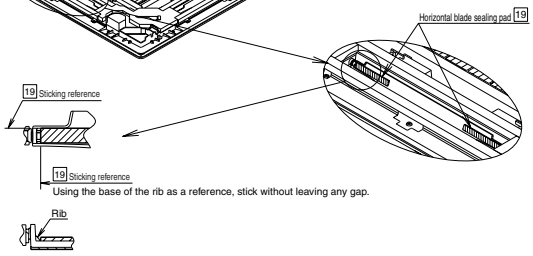

A-A cross section

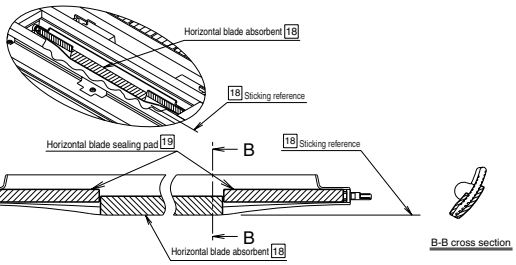

② Stick the horizontal blade sealing pad 19 to the backside of the blade. (For both left and right)

Using the base of the rib as a reference, stick without leaving any gap.

③ Stick the horizontal blade absorbent 18 in between the horizontal blade sealing pad 19.

B-B cross section

⑤ Field Setting

● Depending on the installation status of the indoor unit's main body, the field setting needs to be performed by remote control operation.

● Perform the setting by switching among the following three items: "Mode number", "Setting switch number", and "Setting position number".

● The setting procedure and operation method are described in "How to perform field setting" attached to the remote control.

(1) Setting by number of air outlets used
While referring to "How to perform field setting" attached to the remote control, perform the setting according to the table in the right.
Also, when the corner air outlet is blocked with 4-way blow, set the wind direction slightly downward.
(Note) When the installation height becomes higher than the standard, the setting by ceiling height in (2) becomes necessary.

(2) Setting by ceiling height
For the ceiling height, refer to the guidelines of ceiling height and number of air outlets used, then perform the setting for each air outlet used according to the table below.

(Guidelines of ceiling height and number of air outlets used)

Indoor unit		Number of air outlets used							
		Types ~80				Types 100~			
		All-around blow	4-way blow	3-way blow	2-way blow	All-around blow	4-way blow	3-way blow	2-way blow
Ceiling height	Standard	2.7m or less	3.1m or less	3.0m or less	3.5m or less	3.2m or less	3.4m or less	3.6m or less	4.2m or less
	High ceiling ①	3.0m or less	3.4m or less	3.3m or less	3.8m or less	3.6m or less	3.9m or less	4.0m or less	4.2m or less
	High ceiling ②	3.5m or less	4.0m or less	3.5m or less	——	4.2m or less	4.5m or less	4.2m or less	——

Values for ceiling height are provided as reference.

[Setting content] (Setting by number of air outlets used)

(Number of air outlets used)	Mode number	Setting switch number	Setting position number
3-way blow	13 (23)	1	02
2-way blow			03

[Setting content] (Setting for when corner air outlet is blocked with 4-way blow)

(Wind direction)	Mode number		Setting position number
Standard	13 (23)	4	02
Slightly downward			03

[Setting content] (Setting by ceiling height)

	Mode number		Setting position number
Standard	13 (23)	0	01
High ceiling ①			02
High ceiling ②			03

KDBP55H160FA — Panel Spacer

- Using the panel spacer in areas of the ceiling with limited space makes it possible to install the air conditioner.
- Hides the gap between the decoration panel and the ceiling.

Model / Item	KDBP55H160FA
Exterior	Fresh White
Material	Outside frame: Resin Insulation: Foam polyethylene
Component	Panel spacer, Insulation, Sealant, Mounting screws, Installation manual
Mass (kg)	1.2

Dimensions **Unit:mm**

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2

Combination table

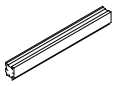

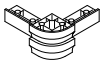

Panel spacer	KDBP55H160FA	KDBP55H160WA KDB55K160WA
Decoration panel	BYCP125K-W1	BYCP125D-W1 BYC125K-W1 BYC125KJW1

Caution

- When the Panel Spacer is installed, it is not possible to have 2-way air outlet.
- Refer to the installation manual for both indoor unit and the Panel spacer for its installation.

Contents of kit

Check if following parts are included with your kit.

Name	Panel spacer frame	Resin corner part	Fixing metal	Screw
Quantity	4 PCS.	4 PCS.	4 PCS.	28 PCS.
Shape・number	① 	② 	③ 	④  M4×10 Tapping screw (Class 2)

Name	Sealing material		Caution label	Others
Quantity	2 PCS.	2 PCS.	1 PC.	
Shape・number	⑤ 	⑥ 	⑦ 	・This Installation Manual

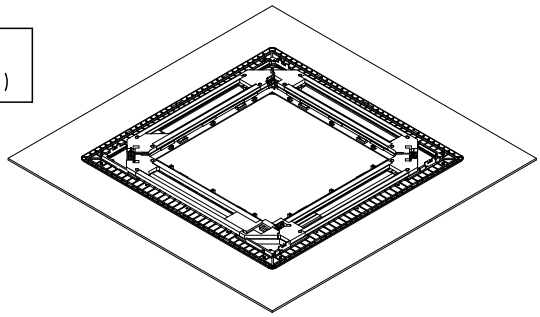

❶ Preparation of the Decoration panel

- Handle the decoration panel with care.

Never place the panel face down, or lean the panel against wall or place on the projective object.
(It causes the dent or damage of the surface of the panel or damage of swing motor.)

(1) Remove the suction grill from the decoration panel.
(Refer to the installtion manual of the decoration panel how to remove.)

(2) Place the panel face down on the corrugated board or the vinyl sheet to protect the surface of the panel.

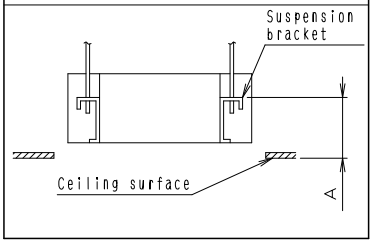

❷ Installation of the indoor unit

Adjust the height of the indoor unit.

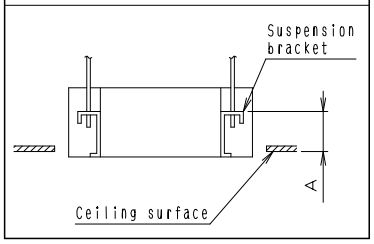

Be sure the piping will not contact with the ceiling joist etc. after adjusting the height.

Standard installation

Decoration panel	A(mm)
BYCP125D-W1 BYC125K-W1 BYC125KJW1	145~150
BYCP125K-W1	125~130

When the Panel spacer is installed

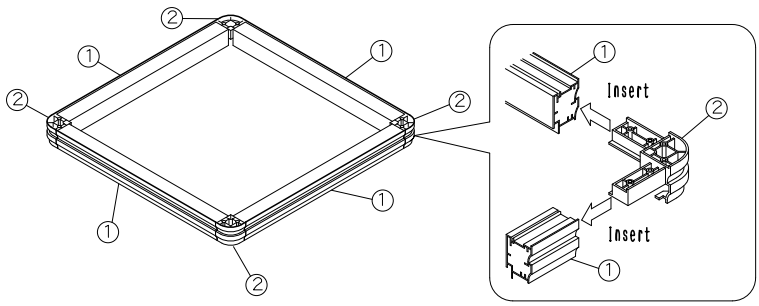

Decoration panel	A(mm)
BYCP125D-W1 BYC125K-W1 BYC125KJW1	105~110
BYCP125K-W1	85~90

1P136564E

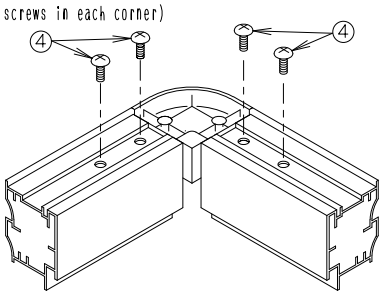

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

❸Assembly of panel spacer

(1)Assemble the panel spacer frame ① and the plastic corner joint ② temporarily.

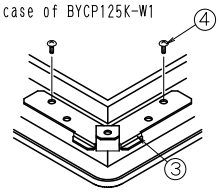

(2)Fix with the screws ④ from the top.
(4 screws in each corner)

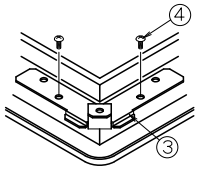

❹ Fixing to the Decoration panel

(1)Set the fixing metal ③ on each corner with screws ④.
(Screw positions change with decoration panels, as shown in the following figure.)

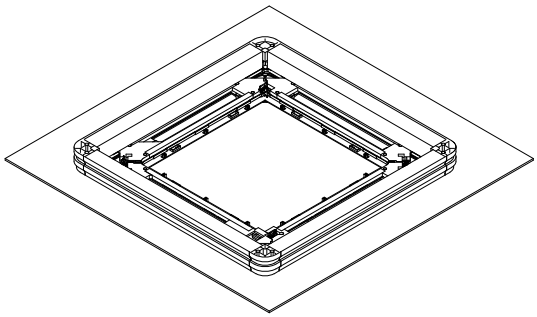

●In the case of BYCP125K-W1

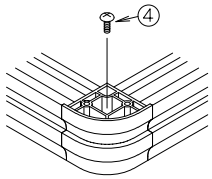

●In the cases of other than the above.

(2)Place the panel spacer assembled in item ③Assembly of panel spacer of the above on the outer frame of the Decoration panel.

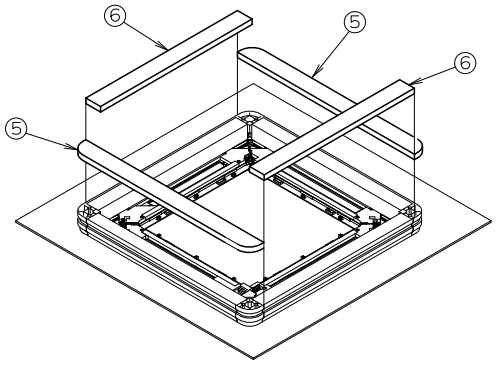

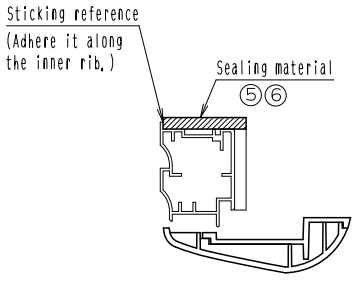

(3)Fix the panel spacer to the fixing metal ③ with screws ④(4 portions).

❺Adhesion of the sealing material

Adhere the sealing material ⑤ ⑥ on the upper face of the panel spacer in the order of ⑤ and ⑥.

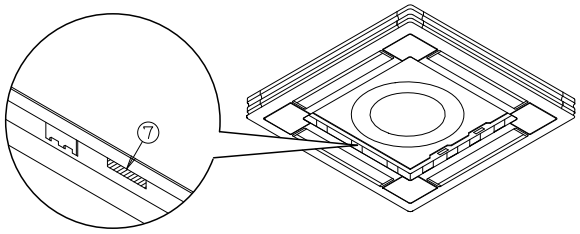

❻Installation of the Decoration panel

(1) install the decoration panel to the indoor unit according to the installation manual of decoration panel.

The panel spacer is not firmly fixed to the decoration panel, so that never hold the panel spacer directly or lean the decoration panel extremely.

(2)After installation of the Decoration panel, adhere the caution sticker ⑦ next to the name plate of the indoor unit as shown on the right.

1P136564E

KDDP55K160(K) — Fresh Air Intake Kit (Chamber type)

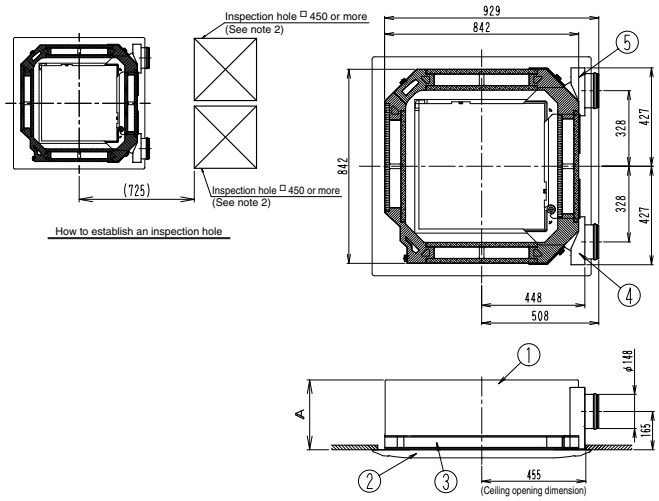

KDDP55K160 (without T-shape, without Fan)

Caution

1. Maximum length of the duct is 4 meters.
2. When installing this kit, an inspection hole is required (in order to maintain this kit). Establish an inspection holes on either side.
3. This kit is field assembly.
4. Install the hanging fixing for the T joint. Otherwise the load from T-shape pipe assembly, etc., could create a gap between the indoor unit and suction chamber.
5. When mounting the duct fan, be sure to use the wiring modification adaptor to interlock with the indoor unit fan.
6. With the intake wind volume, 10% or less of the “H” wind volume of the indoor unit is recommended.
7. This graph shows values from the inlet of the T joint through that of the indoor unit when KDDP55K160K (with a T joint) is connected.

Dimensions **Unit:mm**

Item \ Model	KDDP55K160
Fresh air intake method	Fresh air intake by air conditioning fan
Diameter of connection duct	ϕ150
Mass (kg)	4.5

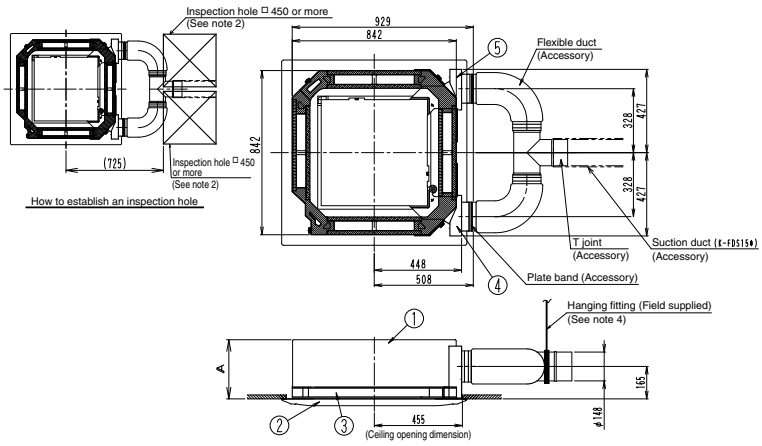

KDDP55K160K (with T-shape, without Fan)

Caution

1. Maximum length of the duct is 4 meters.
2. When installing this kit, an inspection hole is required (in order to maintain this kit). Establish an inspection holes on either side.
3. This kit is field assembly.
4. Install the hanging fixing for the T joint. Otherwise the load from T-shape pipe assembly, etc., could create a gap between the indoor unit and suction chamber.
5. When mounting the duct fan, be sure to use the wiring modification adaptor to interlock with the indoor unit fan.
6. With the intake wind volume, 10% or less of the “H” wind volume of the indoor unit is recommended.
7. This graph shows values from the inlet of the T joint through that of the indoor unit when KDDP55K160K (with a T joint) is connected.

Dimensions **Unit:mm**

Item \ Model	KDDP55K160K
Fresh air intake method	Fresh air intake by air conditioning fan
Diameter of connection duct	ϕ150
Mass (kg)	6.5

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

⚠Caution After thoroughly reading these "Safety precautions", properly perform the installation.

- For the installation parts, accessory parts and specified components must always be used. If the specified components are not used, the kit may fall or an air leak may occur.
- After the completion of installation, perform a test run to check that no abnormality is present.

Combination table

Model name	Installable indoor unit / Panel model name	
KDDP55K160 (K)	SkyAir	FCQ(N)71·100·125·140KVEA
	VRV	FXFQ25~125PVE
	Panel	BYCP125K-W1

Recommendations

· This product can be mounted to a ceiling mounted cassette-type air conditioner <Round flow>.
· According to the table to the left, check the model name of the indoor unit, then mount the kit.
· At the time of mounting, also refer to the installation manual for the indoor unit and to the one for the decoration panel.
· When mounting the duct fan, be sure to use the wiring modification adaptor [KRP1C63] to interlock with the indoor unit fan.
For the intake wind volume, 10% or less of the indoor unit wind volume of "H" is recommended.
When the intake wind volume becomes excessive, operation noise may become louder or the intake temperature detection of the indoor unit may be affected.
· Be sure to mount the supplied sensor assembly.
<For the duct used for field connection, those in the table below are recommended.>

Part name	Part number
Flexible duct (Nominal diameter ϕ150)	K-FDS151D (1m) K-FDS152D (2m) K-FDS153D (3m) K-FDS154D (4m)

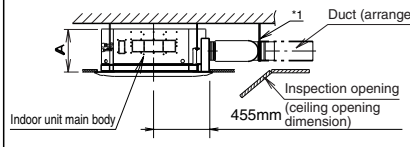

Name	⑭Partition plate	
Shape		
Number of pieces	KDDP55K160	1
	KDDP55K160K	1

Parts content Check the following parts. (Shaded part ⋯⋯ is included in a different package.)

Name	①Suction chamber	②Connecting chamber (left)	③Connecting chamber (right)	④Corner air outlet sealing material	⑤Corner air outlet tape for fixing the sealing material	⑥Mounting screw	⑦Sensor assembly	⑧Clamp	⑨Mounting screw (for sensor)	⑩T joint	⑪Flexible duct	⑫Sealing pad	⑬Installation manual
Shape				A		M5 × 12							(this document)
Number of pieces KDDP55K160	1	1	1	2	2	4	1	2	1	——	——	——	1
Number of pieces KDDP55K160K	1	1	1	2	2	4	1	2	1	1	2	4	1

❶ Selection of Installation Location and Establishment of Inspection Opening

(1) Refer to the figure below to select the installation location.

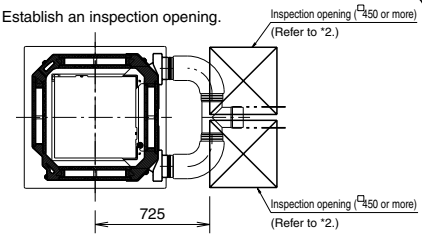

*1. Install the suspension bracket for the T joint section.
Because of the load from T joint, etc., a gap may be created in between the indoor unit and suction chamber.

	Indoor unit	A (mm)
BYCP125K-W1	classes 28 to 90	306
	classes 112 to 160	348

*2. Establish an inspection opening (□450 or more). Establish an inspection opening to either side.

(2) Establish an inspection opening.

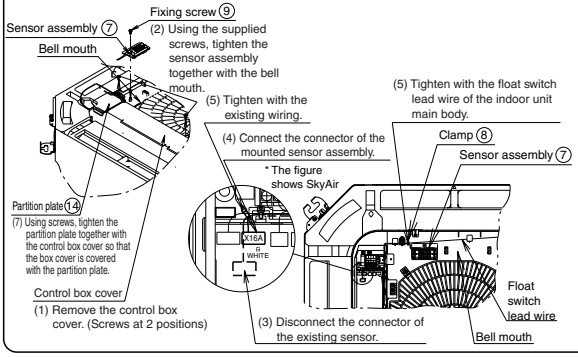

❷ Mounting of Sensor Assemblies and Suction Chamber

* When the indoor unit main body is already installed, perform the following operations, complying with precautions below.
- Shut off power supply before performing operation.
- Remove the decoration panel from the indoor unit main body.
(For details, refer to the installation manual attached to the decoration panel.)

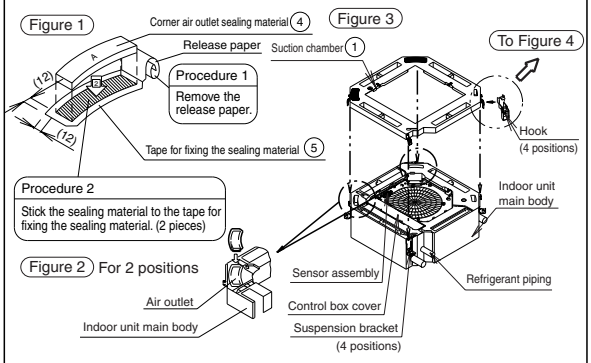

<Mounting of sensor assembly>

(1) According to the installation manual attached to the indoor unit main body, remove the cover of the control box.
(2) Using the supplied screws, tighten the sensor assembly together with the bell mouth to the indoor unit main body.
(Mount without pinching the float switch lead wire.)
(3) Remove the connector (X16A) of the existing sensor from the PC board of the indoor unit main body.
(4) Connect the lead wire of the mounted sensor assembly to the connector (X16A) on the PC board of the indoor unit main body as shown in the figure below.
(5) As shown in the figure below, fix the lead wire using the supplied clamp.
(6) After all the wiring is completed, fit the control box cover according to the installation manual attached to the main body.
(7) Making sure that the control box cover is covered with the partition plate ⑭, tighten these together using the screws on the cover. (Hook the partition plate tab onto the cover.)

<Mounting of suction chamber>

* Figure shows an example where the indoor unit main body is newly installed.
(1) Stick the corner air outlet tape for fixing the sealing material ⑤ to the corner air outlet sealing material ④, then stick it to the air outlet of the indoor unit main body. (2 positions) (Figure 1) (Figure 2)
(2) Mount the suction chamber ① to the indoor unit main body using the hook (4 positions). (Figure 3) to (Figure 5)
For the fixing method of the hook, refer to (Figure 4), then mount at 4 positions.
* Mount so that the contours of the indoor unit main body and suction chamber match. (Figure 4) (Figure 6)

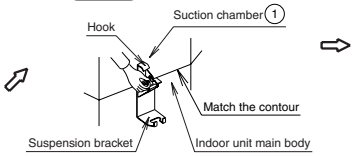

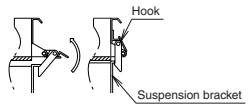

JC : 3K017588C

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2

Figure 4 Mounting status

Fixing method of hook

Figure 5 Status after mounting

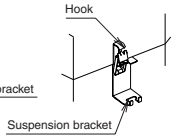

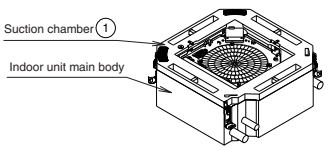

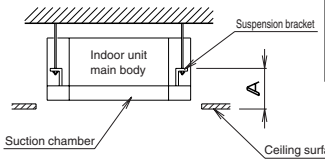

Figure 6 Drawing of mounting at completion

3 Installation of Indoor Unit Main Body and Suction Chamber

- Install the indoor unit main body and suction chamber.
  At the time of installation, perform the engineering work according to the installation manual attached to the indoor unit main body. (For the installation height, refer to the figure to the right.)
- When mounting the suction chamber to the existing indoor unit main body, change the installation height of the indoor unit main body to height A in the figure to the right.

	A (mm)
BYCP125K-W1	180

4 Mounting of Connecting Chamber and Connection of Flexible Duct

Mount the connecting chamber. (1 piece each for left and right, a total of 2 pieces) Figure 7
(1) Press the square hole area of the connecting chamber (2) ((3)) into the hook section (tab) of the suction chamber (1). (2 positions)
(2) Using the supplied screws (6), fix the connecting chamber. (2 positions)

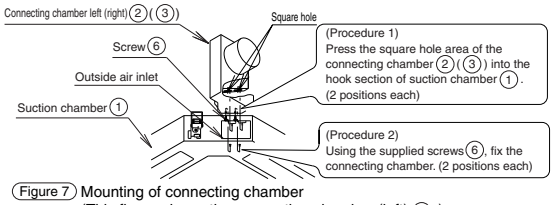

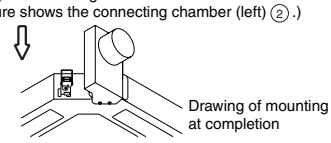

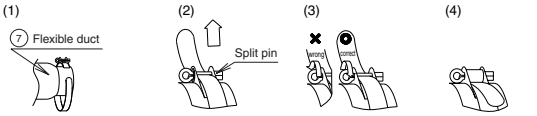

Figure 7 Mounting of connecting chamber
(This figure shows the connecting chamber (left) (2).)

<How to Tight Sealing Pad>

(1) Wrap the sealing pad to the position to be tightened.
(2) Insert the tip of the band through the gap of the split pin, then lightly tighten by hand.
(3) Using a standard tool (driver, pliers, etc.), turn the split pin to the direction shown in the figure to tighten the band.
(4) This completes the mounting.

Precautions
Because the split pin has a structure to prevent counter rotation, be careful with the turning direction. (When a counter rotation is forced, the ratchet will be damaged, and the tightening force will be weakened.)

In case of KDDP55K160K

(3) Connect the connecting chamber and T joint. Figure 8

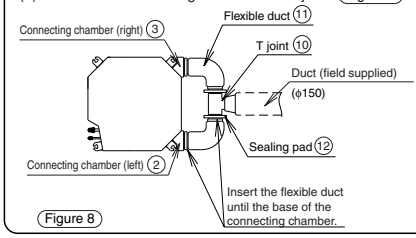

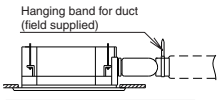

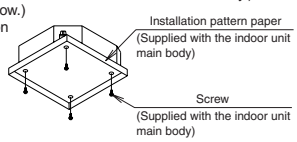

Figure 8

To prevent applying weight to the connecting chamber, hang the T joint using the hanging band for the duct.

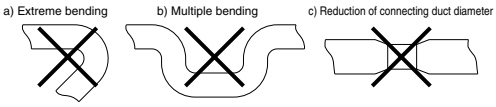

(4) Mount the supplied installation pattern paper to the indoor unit by using screws to cure the indoor unit.
(Refer to the installation manual of the indoor unit main body.)
(Refer to the figure below.)
(Mounting of installation pattern paper)

- Complete all the refrigerant and drain piping works for the indoor unit main body.

5 Duct Connection <<Duct: Nominal diameter ϕ150>>

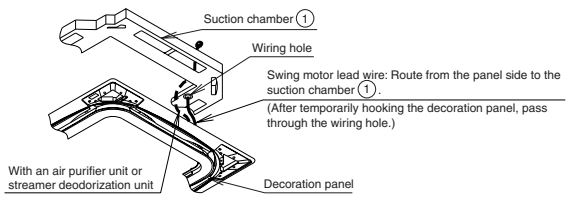

(1) Connect the duct to the duct connection area.
(2) Wrap the connection area with vinyl tape, etc., (arrangement at site) to prevent an air leak.

Precautions
- For the duct, be sure to apply the insulation treatment to prevent condensation.
- Do not perform duct manipulations described in the figure to the right.
- Beware that, in accordance with the local law, there may be cases where the use of a nonflammable duct is compulsory.
- When a duct goes through fire protection areas including a fire proof structure, beware that, in accordance with the local law, it may be required to establish a damper or to build a structure that is not detrimental to fire protection.
- When penetrating a wooden construction wall with a metal duct, apply electrical insulation to the duct and wall.
- Mount the outside duct so that it has a downslope toward the outside, and prevent rainwater from leaking in with a hood, etc. (Gradient of 1/100 to 1/50)
- To prevent the intrusion of small animals, such as birds, and bugs, be sure to attach a netting to sections open to outside air.
- To protect the heat exchanger of the indoor unit, be sure to attach an air filter to sections open to outside air.

6 Mounting of Decoration Panel

- After temporarily hooking the decoration panel, pass the swing motor lead wire, which is coming out from the decoration panel, through the wiring hole of the suction chamber. However, when used in combination with the air purifier unit or streamer deodorization unit, perform wiring without routing through the wiring hole.
- Mount the decoration panel according to the installation manual attached to the decoration panel.

With wireless unit
- For details on connection method, refer to the installation manual attached to the wireless remote control kit (sold separately).

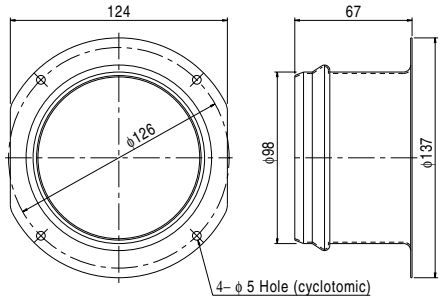

JC : 3K017588C

KDDP55X160 — Fresh Air Intake Kit (Direct installation type)

Dimensions **Unit:mm**

Item \ Model	KDDP55X160
Material	Hot-dip zinc-coated carbon steel sheet
Diameter of connection duct	ϕ100
Accessories	Mounting screws : 4 Insulating material : 1 unit Installation manual

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2

Precautions
- This kit can be mounted to a ceiling mounted cassette-type air conditioner.
- When using this kit, a duct (nominal diameter: ϕ100) is required separately.

- Beware that, in accordance with the local law, there may be cases where the use of a nonflammable duct is compulsory.
- When a duct goes through fire protection areas including a fire proof structure, beware that, in accordance with the local law, it may be required to establish a damper or to build a structure that is not detrimental to fire protection.
- When penetrating a wooden construction wall with a metal duct, apply electrical insulation to the duct and wall.
- Mount the outside duct so that it has a downslope toward the outside, and prevent rainwater from leaking in. (Gradient of 1/100 to 1/50)
- To prevent the intrusion of small animals, such as birds, and bugs, be sure to attach a netting to sections open to outside air.

Parts content Check the following parts.

Name	① Duct flange	② Mounting screws	③ Duct flange insulator	④ Main body opening insulator	⑤ Sealing pad retainer	⑥ Installation manual
Number of pieces	1	4	1	1	1	1
Shape		 M4×12				

Tools needed for mounting Phillips-type screwdriver, nippers, and cutter, etc.

1 Mounting of Duct Flange

1) Cut off the side plate of the indoor unit main body along the dowel hole without damaging the internal insulator. (Figure 1)

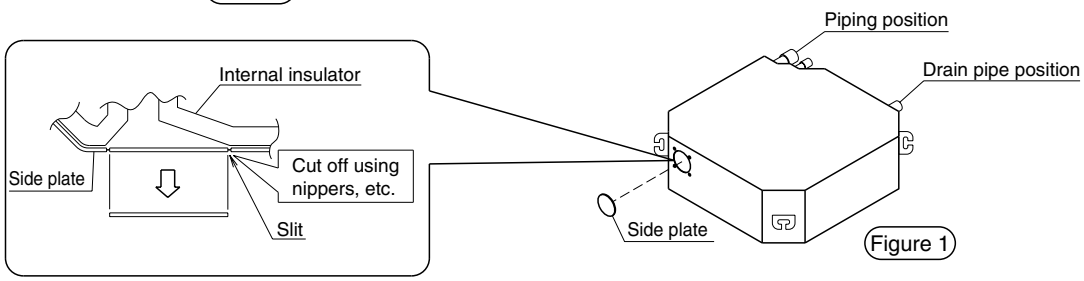

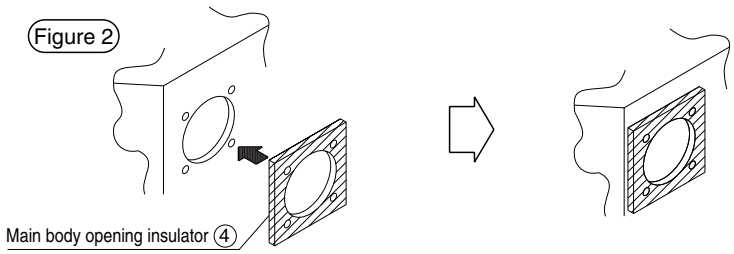

Figure 1

2) Stick the main body's opening insulator ④ to the opening. (Figure 2)

Figure 2

JC : 2P137676B

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

3) After mounting the duct flange ① to the opening using the mounting screws ② (M4×12, 4 pieces), stick the duct flange insulator ③. (Figure 3)

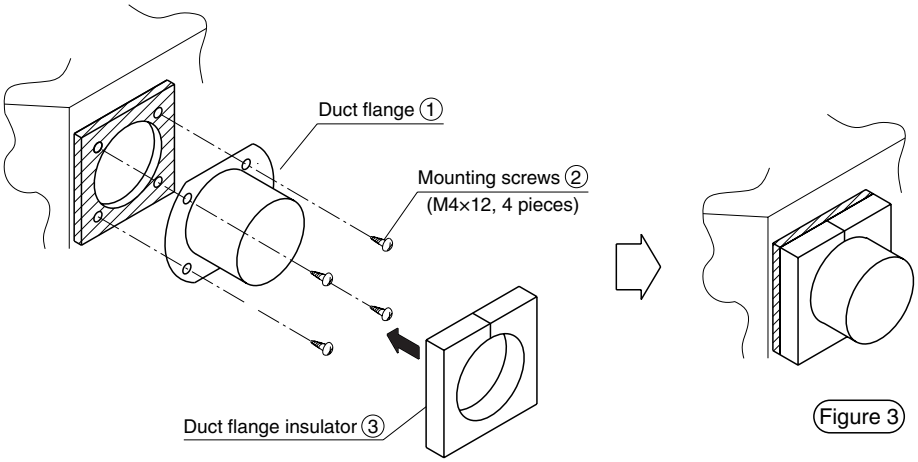

Figure 3

4) Before mounting the decoration panel, remove the insulator, and stick the sealing pad retainer ⑤ to the indoor unit drain pan. (Figure 4)

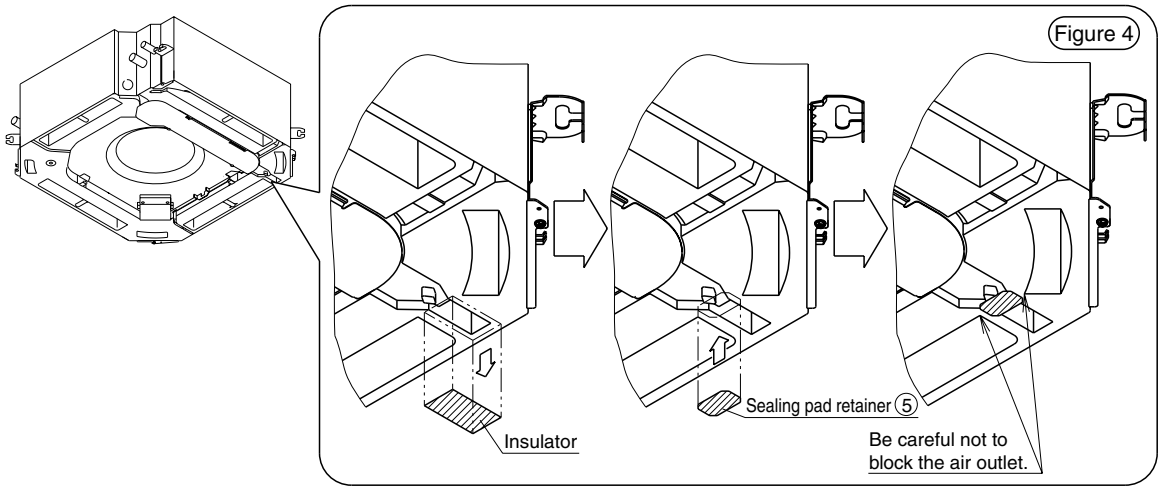

Figure 4

② Duct Connection

<<Duct: Nominal diameter ϕ100>>

1) Connect the duct to the outside of the duct flange. (Figure 5)
2) After the connection, wrap the connection area with tape (field supplied) to prevent an air leak.

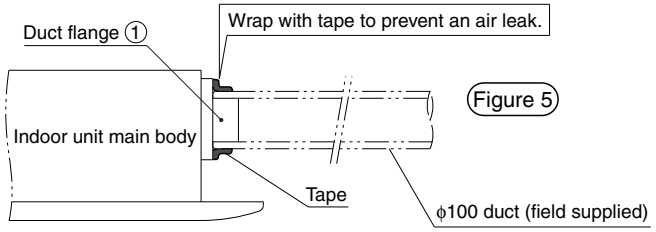

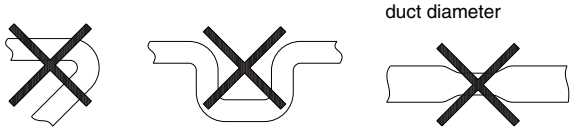

Figure 5

Precautions

- Perform insulation for all ducts.
- Do not perform duct manipulations shown to the right.

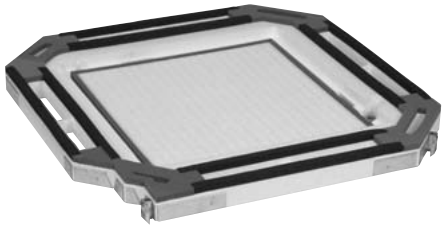

a) Extreme bending b) Multiple bending c) Reduction of connecting duct diameter

	VRV	FXFQ100·125PVE
Panel	BYCP125K-W1	

1 Mounting of High Efficiency Filter Unit

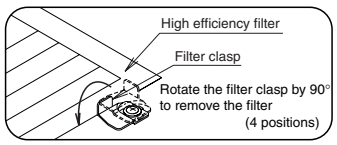

* When the indoor unit main body is already installed, perform the following operations, complying with precautions below.
  Shut off power supply before performing the operation.
  Remove the decoration panel from the indoor unit's main body.
  (For details, refer to the installation manual attached to the decoration panel.)

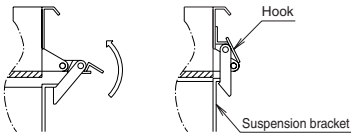

* When the indoor unit main body is newly installed

(1) Remove the high efficiency filter from the chamber. (Figure 1)
(2) Mount the high efficiency filter unit to the indoor unit main body using the hooks (4 positions). (Figure 2) to (Figure 4)
For the fixing method of the hooks, refer to the figure to the right. Mount at 4 positions.

* Mount so that the contours of the indoor unit main body and chamber match. (Figure 3) (Figure 5)

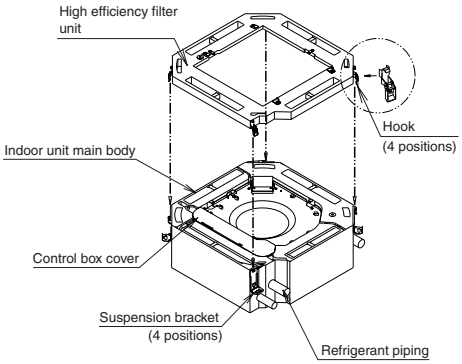

(Figure 1)

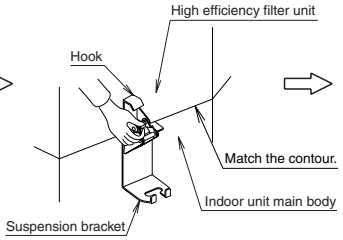

Fixing method of hooks

2

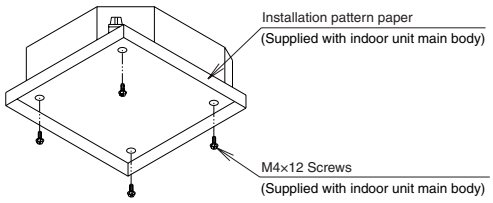

❷ Installation of Indoor Unit Main Body and High Efficiency Filter Unit

- Install the indoor unit main body and high efficiency filter unit.
  At the time of installation, perform engineering work according to the installation manual attached to the air conditioner's main body. (For the installation height, refer to the figure to the right.)
- When mounting the high efficiency filter unit to the existing indoor unit main body, change the installation height of the indoor unit main body to height A in the figure to the right.

	A (mm)
BYCP125K-W1	180

- Mount the supplied installation pattern paper to the indoor unit using screws to cure the indoor unit.
  (Refer to the installation manual for the indoor unit main body.)
  (Refer to the figure below.)

[Mounting of installation pattern paper]

- Complete all the refrigerant and drain piping work for the indoor unit main body.

❸ Mounting of Decoration Panel and Mounting of High Efficiency Filter

- After temporarily hooking the decoration panel, pass the swing motor lead wire, which is coming out from the decoration panel, through the wire through hole of the high efficiency filter unit.
- Mount the decoration panel according to the installation manual attached to the decoration panel.

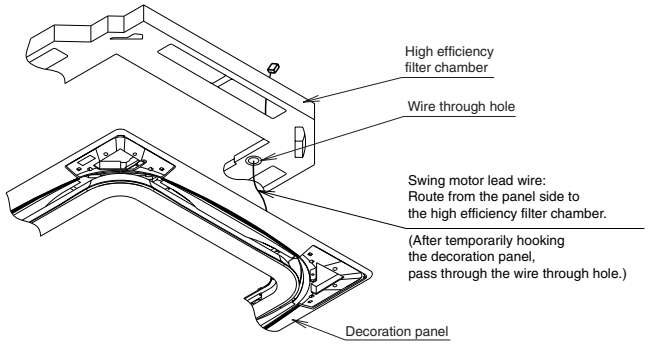

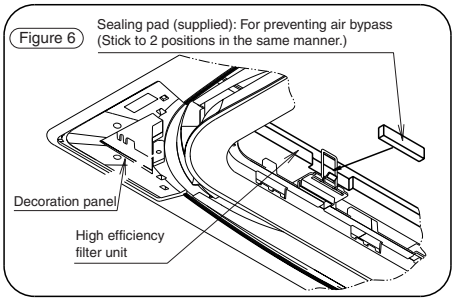

Figure 6

- Mounting of high efficiency filter
  After the completion of wiring and sticking of sealing pad (2 positions), mount the high efficiency filter. (Figure 6) (Figure 7)

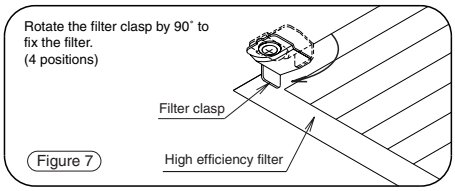

Figure 7

With wireless unit

- Route the connector of the receiver lead wire through the wire through hole, then connect the connector on the indoor PC board ass'y.
- For details on the connection method, refer to the installation manual attached to the wireless remote control kit (sold separately).

❹ Preparation of Indoor Unit

- With the mounting of a high efficiency filter unit, setting the indoor unit main body is required.
  Using the field setting mode on the remote control, switch to the setting position number as shown in the table to the right.
  For the field setting mode, refer to "How to perform field setting" attached to the remote control.

Mode number	Setting switch number	Setting position number	Remarks
13 or 23	0	02	80 only
	1	02	Both 80 and 160

KAFP552H80·160, KAFP553H80·160 — Replacement High Efficiency Filter

Dimensions **Unit:mm**

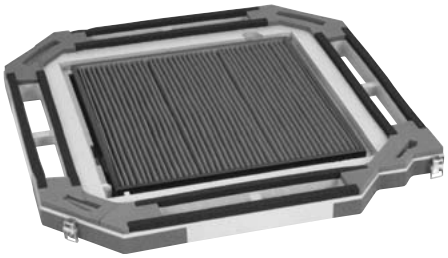

- Cannot be water-washed for reuse.
- The Filter Chamber (KDDFP55H160) is required when the high efficiency filter will be installed.

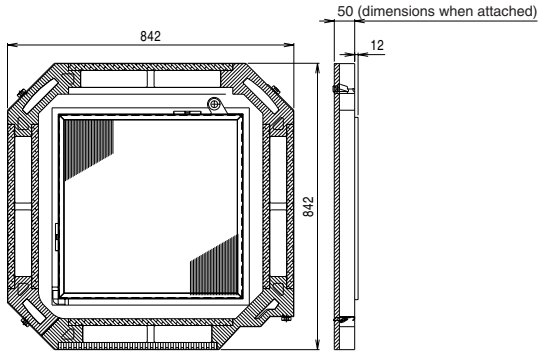

Item \ Model	KAFP552H80	KAFP552H160	KAFP553H80	KAFP553H160
Average efficiency (%)	65 (colorimetric method)		90 (colorimetric method)	
Number of sheets included	1	1	1	1
Air flow rate (m^3/min)	19	35	19	35
Initial pressure loss (Pa)	34			
Final pressure loss (Pa)	98			
Filter element	Non-woven fabric of synthetic fiber			
Life (h)	2,500 (dust concentration 0.15 mg/m^3)		1,800 (dust concentration 0.15 mg/m^3)	
Mass (kg)	0.6	1.2	0.6	1.2

KAFP55H160 — Ultra Long Life Filter Unit

Dimensions **Unit:mm**

Caution

- In order to mount a ultra long life filter unit, setting of the main unit of indoor unit should be made.
- Individual filter (KAFP55H160H) is available

Mounting locations	Filter cleaning period
Locations with much dust	Approximately every 5,000 hours
Locations with little dust (e.g. offices)	Approximately every 10,000 hours

Item \ Model		KAFP55H160
Average efficiency (%)		50 (Gravity method)
Number of sheets included		1
Air flow rate	l/sec	492
	m^3/min	29.5
Initial pressure loss (Pa)		8 or less
Final pressure loss (Pa)		49 or less
Filter element		Polypropylene honeycomb (with mould-proof)
Life (h)		5,000 (dust concentration 0.3 mg/m^3)
Mass (kg)		4.7

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

⚠Caution After thoroughly reading these "Safety precautions", properly perform the installation.

- For the installation parts, accessory parts and specified components must always be used.
  If the specified components are not used, the kit may fall or an air leak may occur.
- After the completion of installation, perform a test run to check that no abnormality is present.

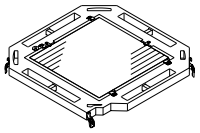

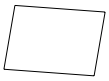

Recommendations

- This product can be mounted to a ceiling mounted cassette-type air conditioner <Round flow>.
- According to the table below, check the model name of the indoor unit main body, then mount the product.
- At the time of mounting, also refer to the installation manual for the indoor unit and to the one for the decoration panel.

Recommendations

The ultra-long life filter can be reused after cleaning.
After the engineering works are completed, provide instructions to the customer about the filter cleaning interval and how to remove the filter.

Parts content Check the following parts.

Name	Ultra-long life filter unit	Sealing pad	Installation manual
Shape			
Number of pieces	1	2	1 (This document)

Combination table

Model name	Installable indoor unit model name / Panel model name	
KAFP55H160	SkyAir	FCQ(N)71·100·125·140KVEA
	VRV	FXFQ25·32·40·50·63·80·100·125PVE
Panel	BYCP125K-W1	

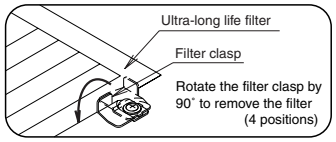

1 Mounting of Ultra-Long Life Filter Unit

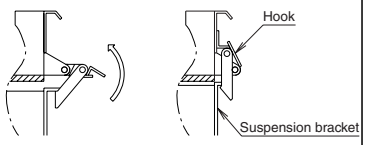

* When the indoor unit main body is already installed, perform the following operations, complying with precautions below.
  Shut off power supply before performing the operation.
  Remove the decoration panel from the indoor unit main body.
  (For details, refer to the installation manual attached to the decoration panel.)
* When the indoor unit main body is newly installed

(1) Remove the ultra-long life filter from the chamber. (Figure 1)
(2) Mount the ultra-long life filter unit to the indoor unit main body using the hooks (4 positions). (Figure 2) to (Figure 4)
For the fixing method of the hooks, refer to the figure to the right. Mount at 4 positions.

* Mount so that the contours of the indoor unit main body and chamber match. (Figure 3) (Figure 5)

Figure 1

Fixing method of hooks

2

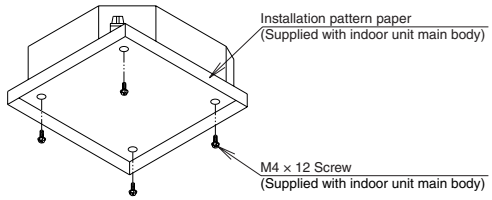

❷ Installation of Indoor Unit Main Body and Ultra-Long Life Filter Unit

- Install the indoor unit main body and ultra-long life filter unit.
  At the time of installation, perform engineering work according to the installation manual attached to the air conditioner's main body. (For the installation height, refer to the figure to the right.)
- When mounting the ultra-long life filter unit to the existing indoor unit main body, change the installation height of the indoor unit main body to height A in the figure to the right.

	A (mm)
BYCP125K-W1	180

- Mount the supplied installation pattern paper to the indoor unit by using screws to cure the indoor unit.
  (Refer to the installation manual of the indoor unit main body.)
  (Refer to the figure below.)

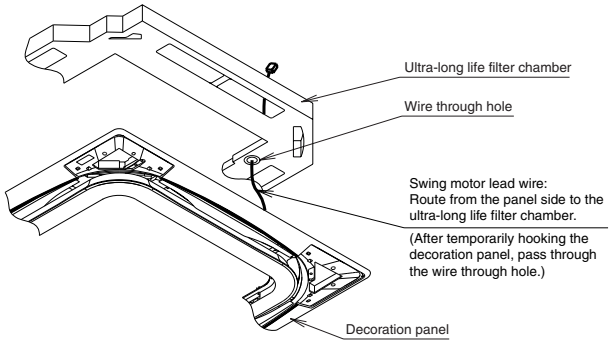

[Mounting of installation pattern paper]

- Complete all the refrigerant and drain piping work for the indoor unit main body.

❸ Mounting of Decoration Panel and Mounting of Ultra-Long Life Filter

- After temporarily hooking the decoration panel, pass the swing motor lead wire, which is coming out from the decoration panel, through the wire through hole of the ultra-long life filter unit.
- Mount the decoration panel according to the installation manual attached to the decoration panel.

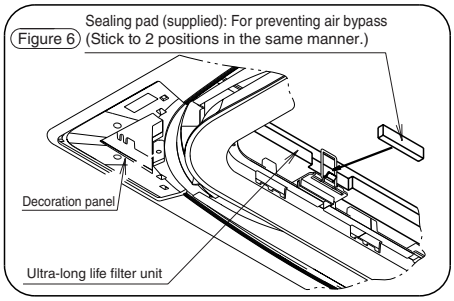

Figure 6

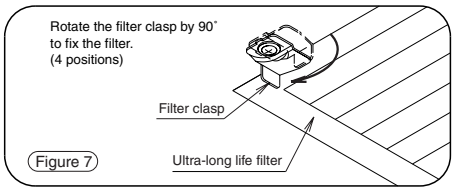

Figure 7

- Mounting of ultra-long life filter
  After the completion of wiring and sticking of sealing pad (2 positions), mount the ultra-long life filter. (Figure 6) (Figure 7)

With wireless unit

- Route the connector of the receiver lead wire through the wire through hole, then connect the connector on the indoor printed circuit board assembly.
- For details on the connection method, refer to the installation manual attached to the wireless remote control kit (sold separately).

❹ Preparation of Indoor Unit

- With the mounting of a ultra-long life filter unit, setting the indoor unit main body is required.
  Using the field setting mode on the remote control, switch to the setting position number shown in the table to the right.
  For the field setting mode, refer to "How to perform field setting" attached to the remote control.

Mode number	Setting switch number	Setting position Number		Filter sign display interval time
10 or 20	0	Where there is minimal fouling (Example: Office, etc.)	01	Approximately every 10,000 hours
		Where there is considerable fouling (Example: Pachinko parlor, etc.)	02	Approximately every 5,000 hours
	1	02		Initial setting for ultra-long life filter

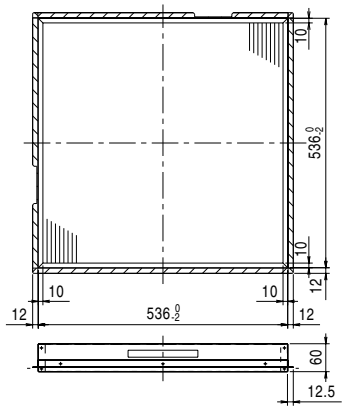

JC : 3K015221D

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

KAFP55H160H
— Replacement Ultra-Long Life Filter Unit (including Filter Chamber)

Dimensions **Unit:mm**

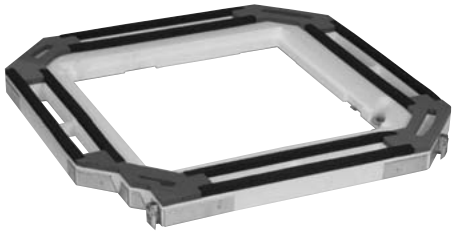

- Can be water-washed. Can be reused.
- The Filter Chamber (KDDFP55H160) is required when the ultra long-life filter will be installed.

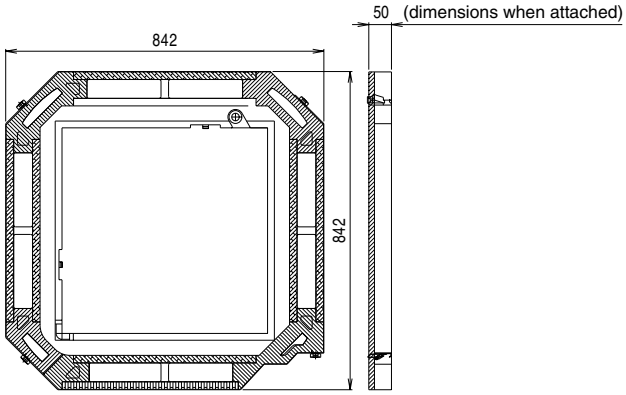

Item \ Model		KAFP55H160H
Average efficiency (%)		50 (Gravity method)
Number of sheets included		1
Air flow rate	l/sec	492
	m^3/min	29.5
Initial pressure loss (Pa)		8 or less
Final pressure loss (Pa)		49 or less
Filter element		Mould-proof resin net
Life (h)		5,000 (dust concentration 0.3 mg/m^3)
Mass (kg)		3.4

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

KDDFP55H160 — Filter Chamber

Dimensions **Unit:mm**

Item			Model: KDDFP55H160
Inserted filter	High-efficiency filter	65% (colorimetric method)	KAFP552H80 KAFP552H160
		90% (colorimetric method)	KAFP553H80 KAFP553H160
	Ultra long-life filter		KAFP55H160H
Mass (kg)			8.0

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

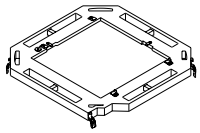

⚠Caution After thoroughly reading these "Safety Precautions", properly perform the installation.

- For the installation parts, accessory parts and specified components must always be used.
  If the specified components are not used, the kit may fall or an air leak may occur.
- After the completion of installation, perform a test run to check that no abnormality is present.

Recommendations (When using ultra-long life filter)

The ultra-long life filter can be reused after cleaning.
After engineering work is completed, provide instructions to the customer about the filter cleaning interval and how to remove the filter.

Parts content Check the following parts.

Name	Filter chamber	Sealing pad	Installation manual
Shape			
Number of pieces	1	2	1 (This document)

Recommendations

- This product can be mounted to ceiling mounted cassette-type air conditioner <round flow>.
- According to the table below, check the model name of the indoor unit main body, then mount the product.
- At the time of mounting, also refer to the installation manual for the indoor unit and to the one for the decoration panel.

Combination table

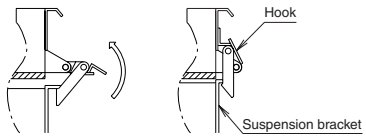

Model name	High efficiency filter	Ultra-long life filter	Installable indoor unit model name / Panel model name	
KDDFP55H160	KAFP552H80 or KAFP553H80	KAFP55H160H	SkyAir	FCQ(N)71KVEA
			VRV	FXFQ25·32·40·50·63·80PVE
	KAFP552H160 or KAFP553H160		SkyAir	FCQ(N)100·125·140KVEA
			VRV	FXFQ100·125PVE
	Panel		BYCP125K-W1	

1 Mounting of Filter Chamber

* When the indoor unit main body is already installed, perform the following operations, complying with precautions below.
  Shut off power supply before performing the operation.
  Remove the decoration panel from the indoor unit main body.
  (For details, refer to the installation manual attached to the decoration panel.)
* When the indoor unit main body is newly installed

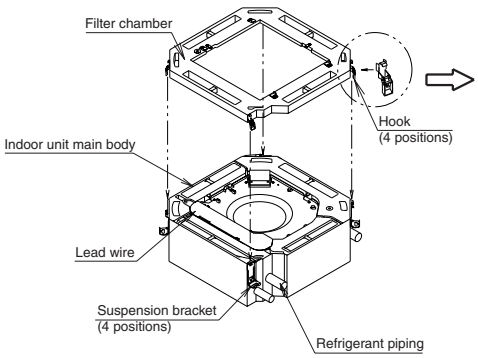

(1) Mount the filter chamber to the indoor unit main body using the hooks (4 positions). (Figure 1) to (Figure 3)
For the fixing method of the hooks, refer to the figure to the right. Mount at 4 positions.

2

❷ Installation of Indoor Unit Main Body and Filter Chamber

- Install the indoor unit main body and filter chamber.
  At the time of installation, perform engineering work according to the installation manual attached to the air conditioner's main body. (For the installation height, refer to the figure to the right.)
- When mounting the filter chamber to the existing indoor unit main body, change the installation height of the indoor unit main body to height A in the figure to the right.
- Mount the supplied installation pattern paper to the indoor unit using screws to cure the indoor unit.
  (Refer to the installation manual of the indoor unit main body.)
  (Refer to the figure below.)

[Mounting of installation pattern paper]

	A (mm)
BYCP125K-W1	180

- Complete all the refrigerant and drain piping work for the indoor unit main body.

❸ Mounting of Decoration Panel and Mounting of Filter Chamber

- After temporarily hooking the decoration panel, pass the swing motor lead wire, which is coming out from the decoration panel, through the wire through hole of the filter chamber.
- Mount the decoration panel according to the installation manual attached to the decoration panel.

- Mounting of filter
  After the completion of wiring and sticking of sealing pad (2 positions), mount the filter.
  (Figure 5) (Figure 6)

Figure 5

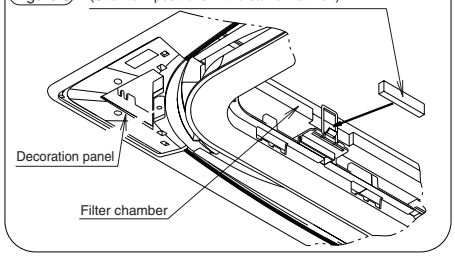

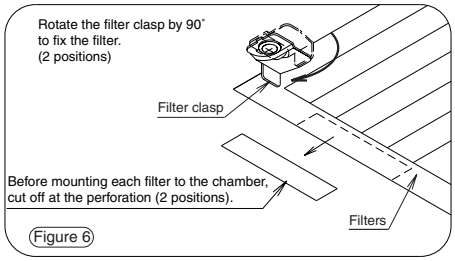

Figure 6

With wireless unit

- Route the connector of the receiver lead wire through the wire through hole, then connect the connector on the indoor PC board assembly.
- For details on the connection method, refer to the installation manual attached to the wireless remote control kit (sold separately).

❹ Preparation of Indoor Unit

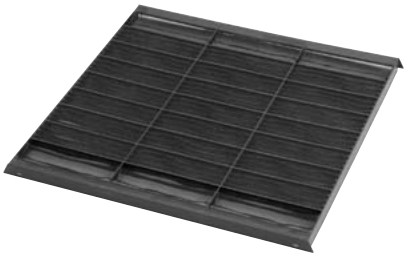

- Depending on the types of mounting filters, setting the indoor unit main body is may be required.
  Using the field setting mode on the remote control, switch to the setting position number shown in the table to the right.
  For the field setting mode, refer to "How to perform field setting" attached to the remote control.

Filter name		Mode number	Setting switch number	Setting position number		Filter sign display interval time
High performance filter	80 only	13 or 23	0	02		———
	Both 80 and 160		1	02		
Ultra-long life filter		10 or 20	0	Where there is minimal fouling (Example: Office, etc.)	01	Approximately every 10,000 hours
				Where there is considerable fouling (Example: Pachinko parlor, etc.)	02	Approximately every 5,000 hours
			1	02		Initial setting for ultra-long life filter

JC : 3K015219E

KAFP551K160 — Replacement Long Life Filter

· Can be water-washed. Can be reused.

Dimensions **Unit:mm**

Item \ Model		KAFP551K160
Average efficiency (%)		60 (Gravity method)
Number of sheets included		1
Air flow rate	l/sec	300
	m^3/min	18
Initial pressure loss (Pa)		4.9 or less
Final pressure loss (Pa)		49 or less
Filter element		Mould-proof and antibacterial resin net
Life (h)		5,000 (dust concentration 0.15 mg/m^3)
Mass (kg)		0.2

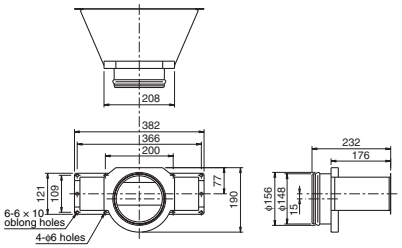

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

KDJP55H80·160 — Branch Duct Chamber

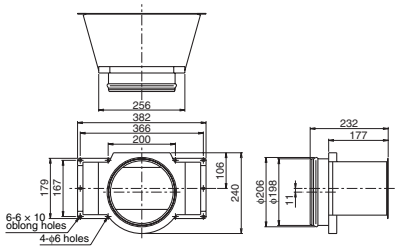

Dimensions **Unit:mm**

KDJP55H80

KDJP55H160

Item \ Model	KDJP55H80	KDJP55H160
Material	Hot-dip zinc-coated carbon steel sheet (with insulation)	

Caution

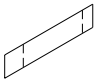

1. When mounting, refer to the installation manuals for the indoor unit and the decoration panel.

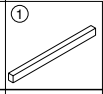

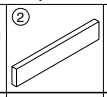

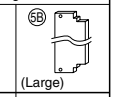

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Precautions

- This product can be mounted to a ceiling mounted cassette-type air conditioner <round flow>. According to the table to the right, check the model name of the indoor unit, then mount the product.
- At the time of mounting, also refer to the installation manual for the indoor unit main body and to the one for the decoration panel.
- For the duct (field supplied) to be connected, those specified in the table to the right are recommended.

Parts content Check the following parts.

Name		Branch duct chamber	Mounting screw	Installation manual	Sealing material	Tape for fixing the sealing material
Shape/ Number			 M4×16			
Number of pieces	80	1	10	1	2	2
	160					

Name		Main body insulator			Main body opening sealant		
Shape/ Number		① 	② 	③ 	④ 	⑤A (Small) 	⑤B (Large) 
Number of pieces	80	1	1	2	2	2	——
	160					1	1

Combination table

Model name		Installable indoor unit model name
KDJP55H80	SkyAir	FCQ(N)71KVEA
	VRV	FXFQ25~80PVE
KDJP55H160	SkyAir	FCQ(N)100·125·140KVEA
	VRV	FXFQ100 · 125PVE

Recommended duct

Branch duct chamber	Connecting duct kit name
KDJP55H80	K-FDK151B (1 m) or K-FDK152B (2 m) (Flexible duct: Nominal diameter of Φ150)
KDJP55H160	K-FDK201B (1 m) or K-FDK202B (2 m) (Flexible duct: Nominal diameter of Φ200)

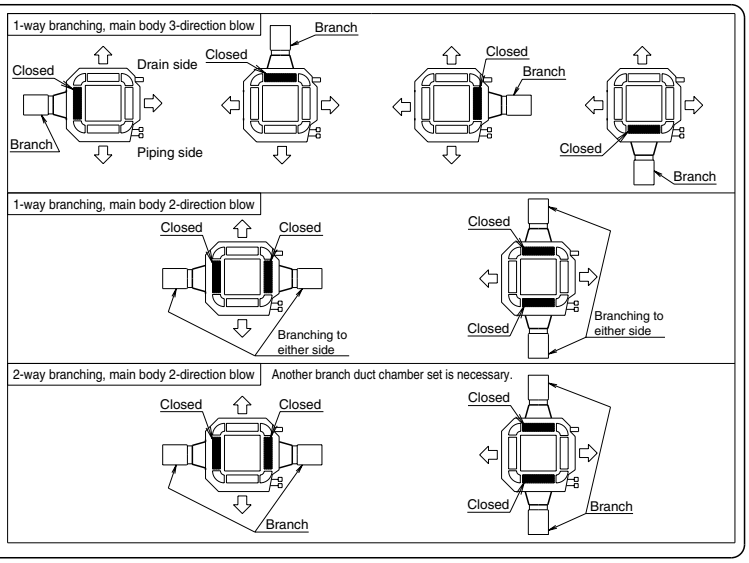

1 Preparation Before Installation

With this branch duct, an independent 4-way and simultaneous 2-branch drawing are also possible.

- With this branch duct chamber, the blow directions shown in the figure to the right can be selected. Select the blow direction that is most appropriate for the room shape and installation position. (Blow directions other than those in the figure to the right cannot be selected.)
- From the external static pressure/air volume characteristics (refer to the technical guide), select the duct length and air outlet.

Precautions

- Be sure to securely block the air outlet of the indoor unit main body to which the branch duct chamber is mounted. If the blocking is incomplete, water spraying or condensation may occur. Do not block the corner sections. (Refer to 4 Mounting of Sealing Material to Indoor Unit .)
- When mounting the branch duct chamber, be sure to perform field setting of the indoor unit main body. (Refer to 5 Field Setting .)

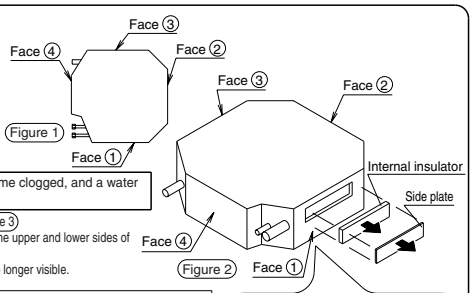

2 Mounting of Branch Duct Chamber

When an installation is performed after mounting the branch duct chamber to the indoor unit main body (at new installation), do not apply force to the branch duct chamber. (Deformation may occur.)

(1) Select the position where the branch duct chamber is mounted.

(2) Mount the branch duct chamber to the indoor unit according to the following procedure. (Figure 2 is an example of the face ① side.)

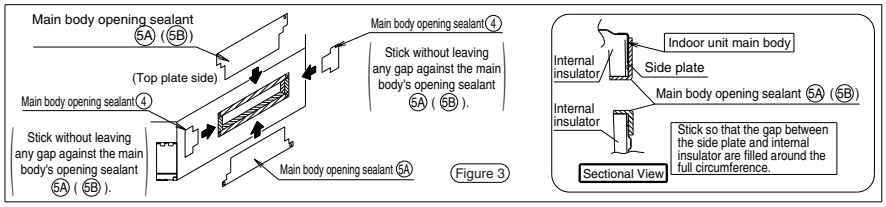

1) Along the slit, cut the side plate of the indoor unit to which the branch duct chamber is mounted. Then, cut the internal insulator along the groove.
(Use nippers, etc., to cut the slit section, and cutter, etc., to cut the groove section.) Figure 2

⚠ For the port opening operation, do not use a tool that produces chips, such as a saw. The drain system may become clogged, and a water leak may occur.

2) Use the sealant for sticking so that the gaps between the side plate and internal insulator are filled around the full circumference. Figure 3

- First, stick the main body's opening sealant ④ to left and right of the opening, and the main body's opening sealant ⑤A (⑤B) to the upper and lower sides of the opening.
At this time, fold the main body opening sealant towards the inside so that the gap between the side plate and internal insulator is no longer visible.

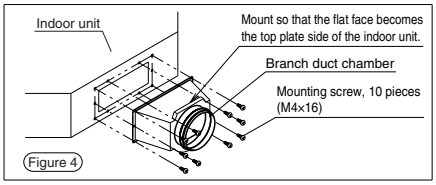

JC : 1P137894D

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

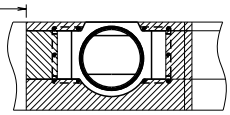

2

3) Mount the branch duct chamber. (Figure 4)

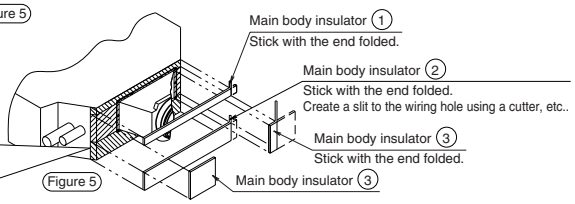

(3) Stick the main body insulator to the indoor unit. (The figure is an example of the face (1) side) (Figure 5)

Stick with the left sides of the main body insulators (1), (2), and (3) aligned.

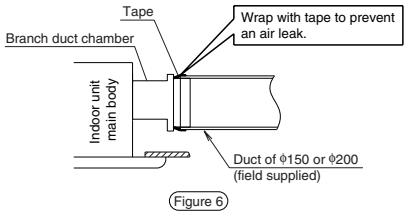

Be sure to stick the main body insulator from the top of the branch duct chamber flange (sheet metal section). Otherwise, condensation may occur.

3 Duct Connection <<Duct: KDJP55H80 ··· Nominal diameter of ϕ150 KDJP55H160 ··· Nominal diameter of ϕ200>>

1) Connect the duct to the outside of the branch duct chamber. (Figure 6)
- After the connection, wrap the connection area with tape (field supplied) to prevent an air leak.

• Apply insulation for all the ducts.

2) Do not perform duct manipulation described below.

a) Extreme bending

b) Multiple bending

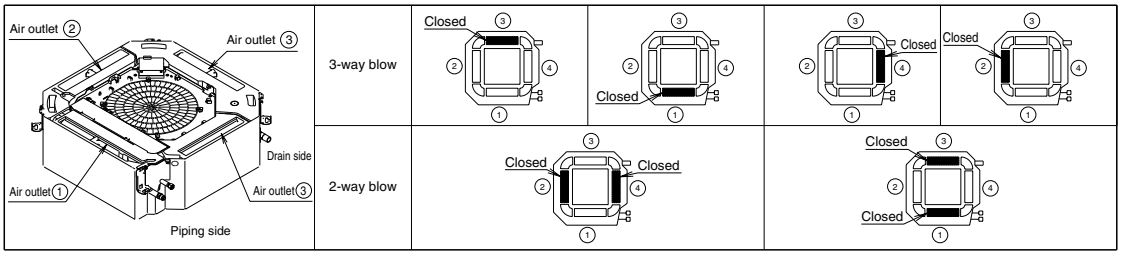

c) Reduction of connecting duct diameter

1. Beware that, in accordance with the local law, there may be cases where the use of a nonflammable duct is compulsory.
2. When a duct goes through fire protection areas, including a fire proof structure, beware that, in accordance with the local law, it may be required to establish a damper or to build a structure that is not detrimental to fire protection.
3. When penetrating a wooden construction wall with a metal duct, apply electrical insulation to the duct and wall.

4 Mounting of Sealing Material to Indoor Unit <<With the sealing material supplied in this kit, blocking of two openings can be performed.>>

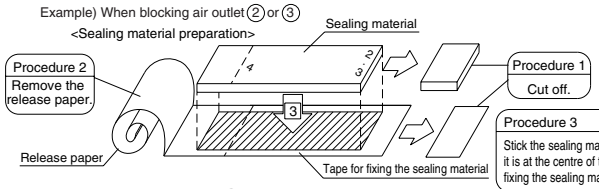

- For the block position, refer to 1 Preparation Before Installation, then determine the position. Always block the branch duct mounting surface.

(1) Matching the longitudinal air outlets numbered from (1) to (4) to be blocked, prepare the sealing material and tape for fixing the sealing material.
- Cut both the sealing material and tape for fixing the sealing material along the perforation (dotted line).
- Stick the sealing material to the tape for fixing the sealing material. (Stick so that the sealing material is at the centre of the tape for fixing the sealing material.)

Example) When blocking air outlet (2) or (3)

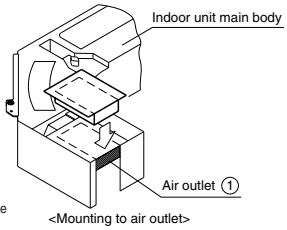

<Sealing material preparation>

Procedure 3
Stick the sealing material so that it is at the centre of the tape for fixing the sealing material.

Precautions
The sealing material has a directional property. Be sure to stick the sealing material to the tape for fixing the sealing material so that the printed number of the outlet to be blocked becomes visible.

(2) Stick the sealing material that was prepared in (1) to the air outlet of the indoor unit main body.

<Mounting to air outlet>

- When blocking the air outlet (1), sealing material preparation is not necessary.

5 Mounting of Decoration Panel

For safety, be sure to shut off power supply before starting the decoration panel mounting operation and connecting the connectors for swinging.

Refer to the installation manual attached to the decoration panel.
After mounting the decoration panel, check that no gap is present between the decoration panel and the unit's main body.

6 Field Setting

- When mounting the branch duct chamber, setting the indoor unit main body is required. After all the engineering work is completed, perform setting together with field setting of the indoor unit.
Using the field setting mode on the remote control, switch to the setting position number shown in the table to the right. For the field setting mode, refer to "How to perform field setting" attached to the remote control.

Branch blow pattern	Mode number	Setting switch number	Setting position number
1-way branching, 3-direction blow	13 or 23	1	02
1-way branching and 2-way blow or 2-way branching and 2-way blow			03

KKSJ55K160 — Chamber Connection Kit

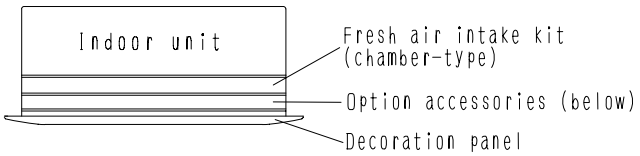

Dimensions Unit:mm

Combining with option accessories (chamber-type)

- This chamber connection kit is for use with the multi-flow set. Refer to the catalog, etc. for details on the separately sold items (chamber-type) to be connected.
- Refer to the table at right for combinations of this kit and other option accessories(chamber-type). Also, be sure to install the fresh air intake (chamber-type) kit above.

	Option accessories (chamber-type)	Above: Fresh air intake kit
below	Air purification unit	○
below	High Effciency filter unit	○
below	Ultra-long life filter unit	○
below	Fresh air intake kit	

Combinations not listed in this table should not be attempted as they will cause malfunctions.

Contents of parts

Check the following parts

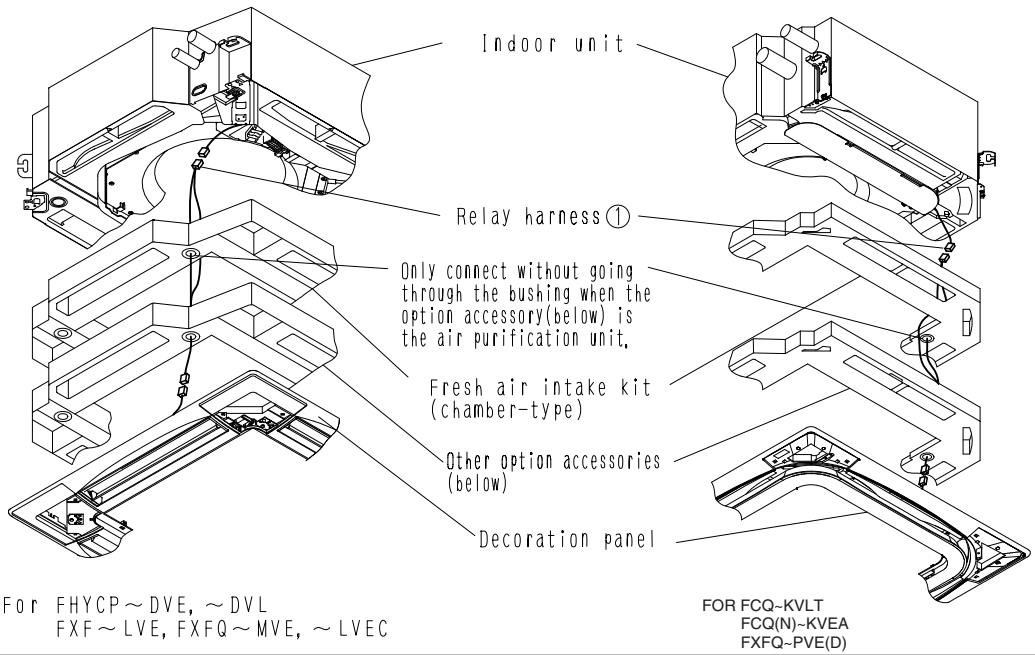

Name	Relay harness	Clamping material
Shape	① 	② 
Quantity	1 PC.	2 PCS.

Installation of the Chamber connection kit.

Refer to the installation (attachment) manuals included with the indoor unit, the option accessories (chamber-type), and Decoration panel for details on installation (attachment).

Caution

Extend the Decoration panel 's swing motor lead wire using the included relay harness ① and connect it to the indoor unit. When doing this, use the included clamping material ② to tie the lead wire so it does not droop.

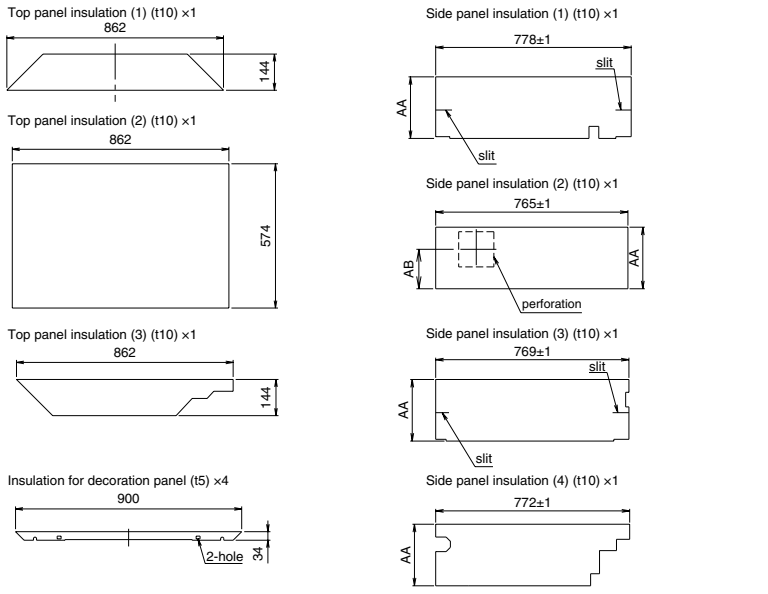

3P089651D

1 Sticking Procedure

● Perform the work on soft cloth to prevent damage to the indoor unit and panel.

<Procedure>

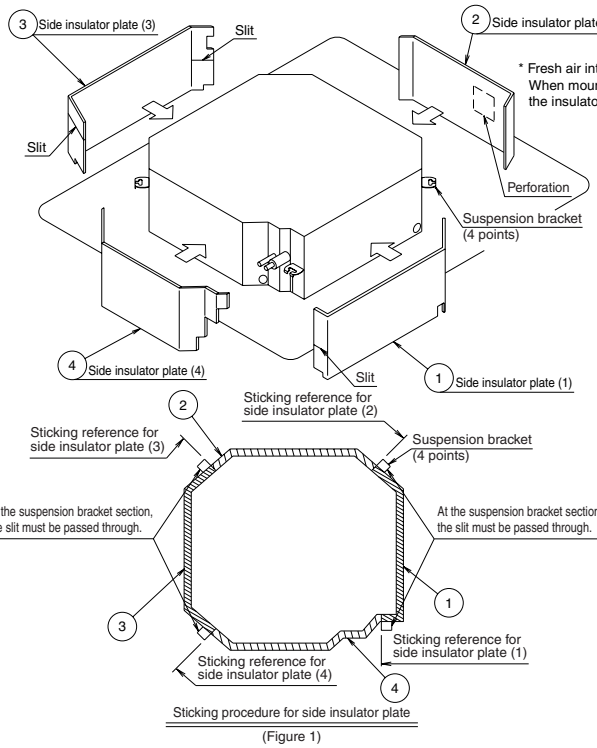

(1) According to the sticking procedure for the side insulator plate, stick the side insulator plates (1 to 4) in sequential order without leaving any gap in between. (Figure 1)
(When mounting the fresh air intake kit (KDDP55X160), cut off the side insulator plate (2) with a cutter knife along the perforation. The cut-off insulator is no longer needed.)

(2) Stick the top insulator plates (1 to 3) without leaving any gap in between. Also, stick the top insulator plates without leaving any gap against the side insulator plates all the way around. (Figure 2)

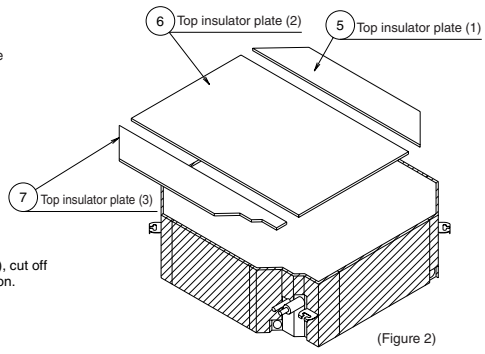

(3) Hang the product.

(4) Stick the suspension bracket insulator to the suspension bracket together with the washer and bolt. (Figure 3)

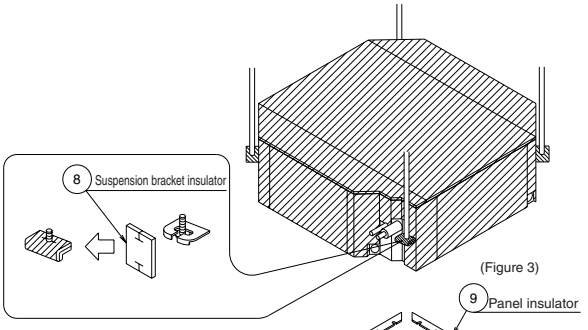

(5) Lastly, stick the panel insulator to the backside of the panel. (Figure 4)

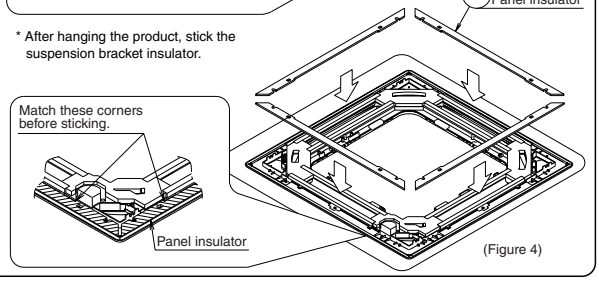

(Figure 1)

1. Features

= Drastic change of performance, function and design =

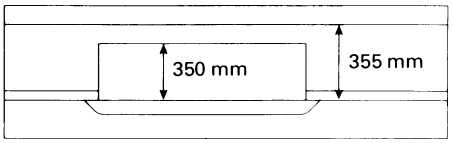

Line-up
FXCQ20MVE~FXCQ125MVE

<Features>

Compactness

- Lowest height in the industry with whisper quietness

Low operation sound
Less weight

Improvement in installation and design flexibility

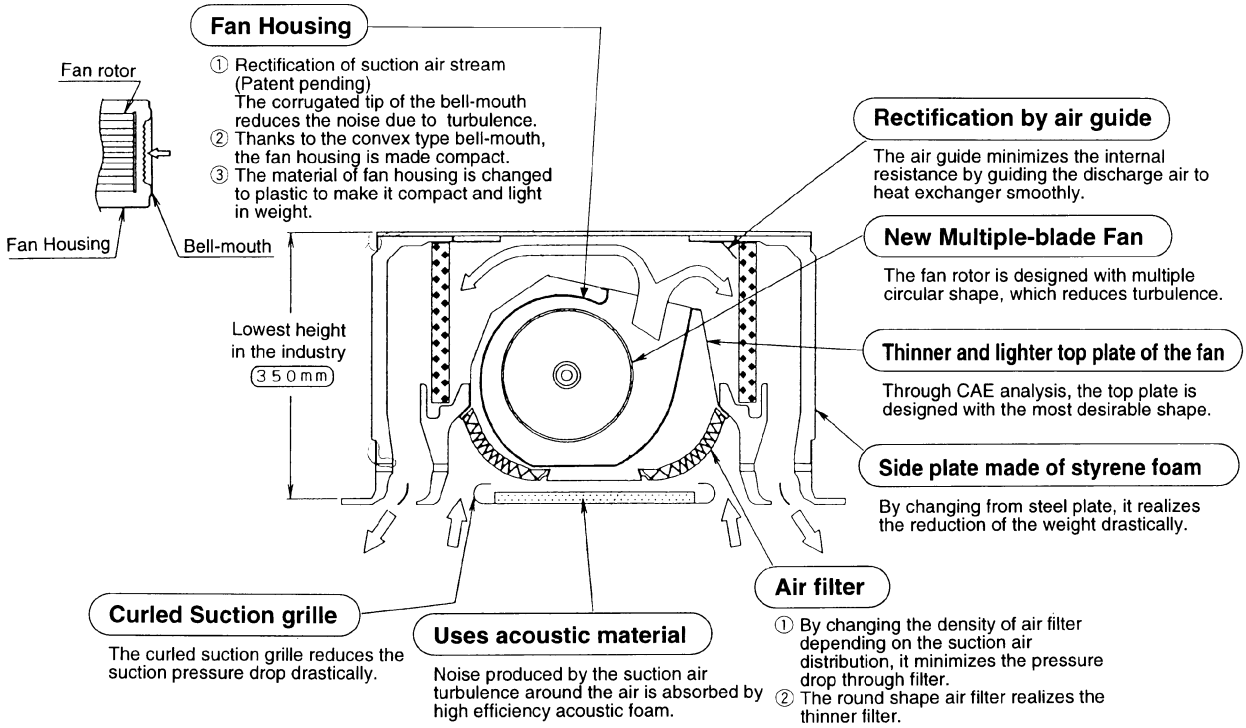

- Reduction of weight of both main unit and panel
- Standardized sectional module
- Matching the center of main unit and panel

Less maintenance

- Flat type suction grille of easy cleaning
- Detachable blade
- To minimize the soiling of the ceiling

<Details>

(1) Main technical improvement for compactness

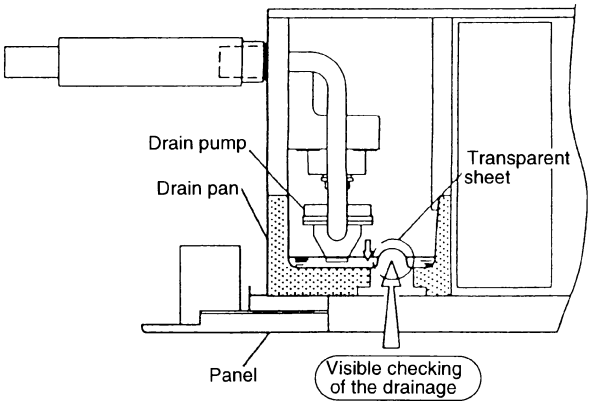

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

(2) Improvements for facilitating the installation and maintenance

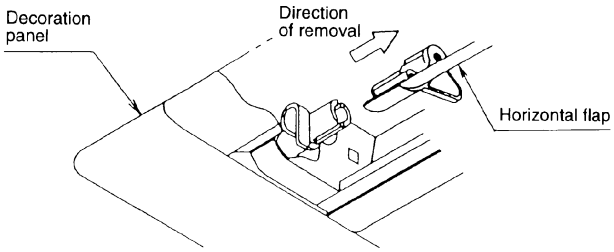

Facilitating the installation

- **Lighter in weight**
  (Main unit and panel)
- **Center of the ceiling opening and the unit.**
  The same position
- **Checking the drainage flow**
  The cover of inspection hatch is detachable with one touch.
- **Facilitating the checking of drainage**

Facilitating the maintenance

- **Soiling of the ceiling**
  About 1/5 of the conventional model
- **Cleaning of the suction grille**
  Easy to clean because of flat shape
- **Cleaning of the air discharge flap (Detachability)**
  The flap can be detached with one touch without removing the panel
- **Detachment of air discharge flap**

- **2 different positions of auto-swing for more comfort.**

Position of Auto-Swing	Standard Position	Ceiling Soiling Prevention Position
Operation of Auto-Swing	 Flaps swing within the range of 0°~60°	
5 Steps of Direction	 5 steps within the range of 0°~60°	 5 steps within the range of 45°~60°
Prevention of Draft	 Prevents cold draft (heating operation)	—
Auto-set Air Direction	 The position of flaps is automatically set at the position of previous operation. (Initial position is 30° for cooling, and 60° for heating.)

6. Electric Characteristics

Units					Power supply		IFM		Input(W)	
Model	Type	Hz	Volts	Voltage range	MCA	MFA	KW	FLA	Cooling	Heating
FXCQ20M	VE	50	220-240	MAX. 264 Min. 198	0.5	15	0.010	0.4	77	44
FXCQ25 · 32M					0.5	15	0.015	0.4	92	59
FXCQ40 · 50M					0.8	15	0.020	0.6	130	97
FXCQ63M					0.9	15	0.030	0.7	161	126
FXCQ80M					1.1	15	0.050	0.9	209	176
FXCQ125M					1.3	15	0.085	1.0	256	223

Symbols:

MCA : Min. Circuit Amps (A)
MFA : Max. Fuse Amps (See note 5)
KW : Fan Motor Rated Output(KW)
FLA : Full Load Amps(A)
IFM : Indoor Fan Motor

Note:

1. Voltage range

   Units are suitable for use on electrical systems where voltage supplied to unit terminals is not below or above listed range limits.

2. Maximum allowable voltage unbalance between phases is 2%.

3. MCA/MFA

   MCA = 1.25 X FLA

   MFA ≦ 4 X FLA

   (Next lower standard fuse rating. Min. 15A)

4. Select wire size based on the MCA.

5. Instead of fuse, use Circuit Breaker.

FXCQ125M	44	38	46	40

Note:
1. The operating conditions are assumed to be standard (JIS conditions).
2. These operating values were obtained in a dead room (conversion values).
   Sound level will vary depending on a range of factors such as the construction (acoustic absorption coefficient) of the particular room in which the equipments installed.

Drain Pump Kit

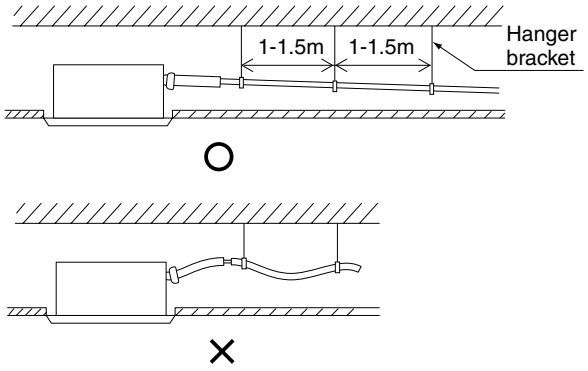

Indoor unit	Drain pump kit
FXCQ–M	Standard (Equipped with indoor unit)

Drain Piping Work

〈〈**Rig the drain pipe as shown below and take measures against condensation. Improperly rigged piping could lead to leaks and eventually wet furniture and belongings.**〉〉

(1) Carry out the drain piping

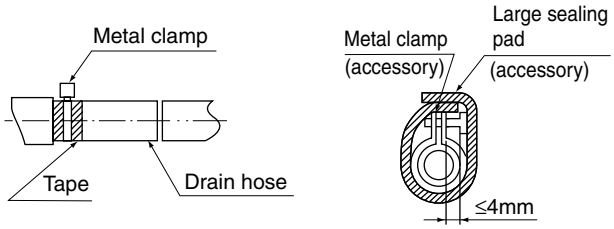

- The diameter of the drain pipe should be greater than or equal to the diameter of the connecting pipe (vinyl tube ; pipe size : 25 mm ; outer dimension : 32 mm).
- Keep the drain pipe short and sloping downwards at a gradient of at least 1 / 100 to prevent air pockets from forming.
- If the drain hose cannot be sufficiently set on a slope, execute the drain raising piping.
- To keep the drain hose from sagging, space hanging wires every 1 to 1.5 m.

⚠ CAUTION

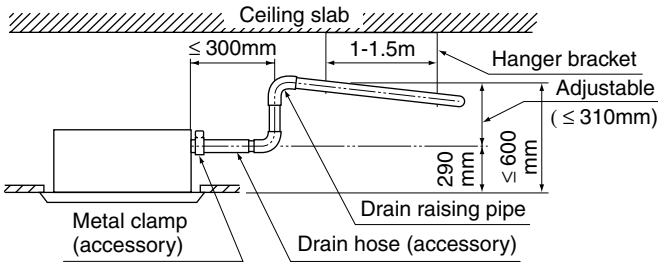

Setting the unit at an angle opposite to the drain piping might cause leaks.

- Use the drain hose and the metal clamp.
  Insert the drain hose into the drain socket, up to the tape.
  Tighten the clamp until the screw head is less than 4 mm from the hose.
- Wrap the attached sealing pad over the clamp and drain hose to insulate.
- Insulate the drain hose inside the building.

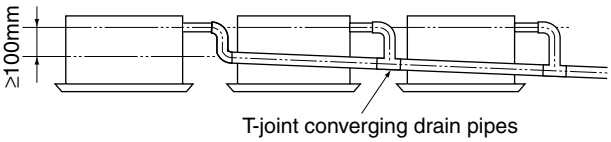

〈 **PRECAUTIONS FOR DRAIN RAISING PIPING** 〉

- Install the drain raising pipes at a height of less than 310 mm.
- Install the drain raising pipes at a right angle to the indoor unit and no more than 300 mm from the unit.

- If converging multiple drain pipes, install according to the procedure shown below.

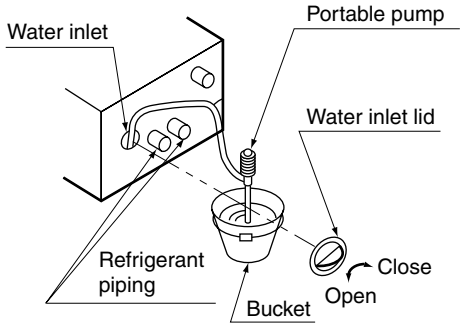

Select converging drain pipes whose gauge is suitable for the operating capacity of the unit.

3PR01906-7R

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

(2) After piping work is finished, check drainage flows smoothly.

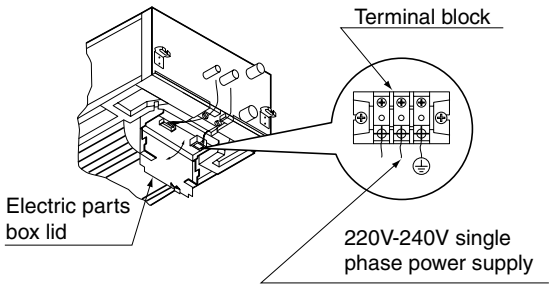

- Open the water inlet lid, add approximately 2.5 liter of water gradually and check drainage flow.

[WHEN ELECTRIC WIRING WORK IS FINISHED]

- Check drainage flow during COOL running, explained under “TEST OPERATION.”

[WHEN ELECTRIC WIRING WORK IS NOT FINISHED]

- Remove the electric parts box lid, connect a power supply and remote controller to the terminals. (Refer to the “HOW TO CONNECT WIRINGS”)
  Be sure attach the electric parts box lid before turning on the power.
- Next, press the inspection / test operation button “ TEST ” on the remote controller. The unit will engage the test operation mode. Press the operation mode selector button “ ” until selecting FAN OPERATION “ ”. Then, press the ON / OFF button “ ”. The indoor unit fan and drain pump will start up. Check that the water has drained from the unit. Press “ TEST ” to go back to the first mode.
- **Be careful when doing so because the fan is turning at the same time.**
- Attach the electric parts box lid as before.

CAUTION

- Drain piping connections
  Do not connect the drain piping directly to sewage pipes that smell of ammonia. The ammonia in the sewage might enter the indoor unit through the drain pipes and corrode the heat exchanger.
- Keep in mind that it will become the cause of getting drain pipe blocked if water collects on drain pipe.

3

Installation

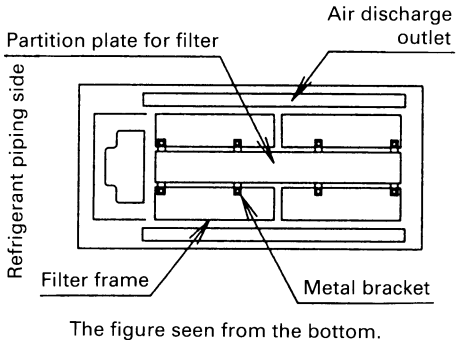

■ Installation of the filter frame

Attach the filter frame to the indoor unit, where the original filter was located. (Refer to the operation manual of the indoor unit how to remove the standard filter. The standard filter removed shall not be used.)

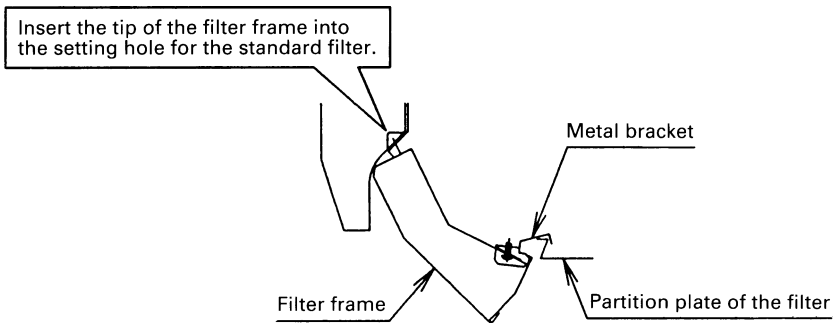

In case of KAFJ532G160 and KAFJ533G160

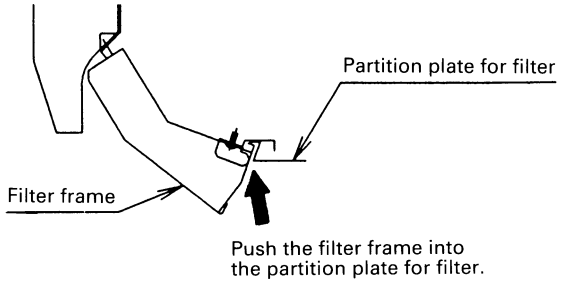

There are four filter frames of 2 kinds of each having different position of the metal bracket. Install the filter frames to the indoor unit as shown below.

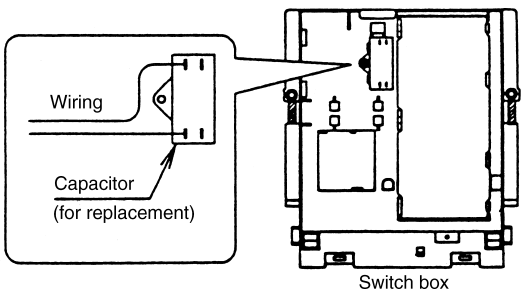

1. Loose the screw of the metal bracket located on each end of the filter frame and hook the filter frame temporarily to the partition plate located at the center of the indoor unit.

2. Fasten the screw of the metal bracket tightly.

Replacement guide of capacitor for fan motor

1. Features

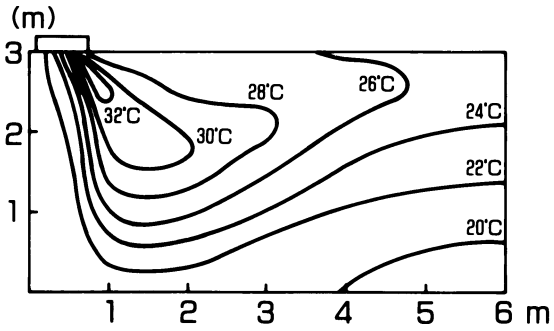

215 mm-thick body features discreet, slim design and offers a wide variety of discharge methods and mounting such as in corners or in suspended ceilings, etc.

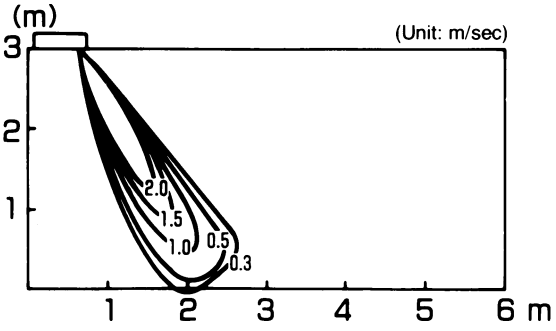

- Single-flow type offers effective air discharge from corners of from a suspended ceiling.

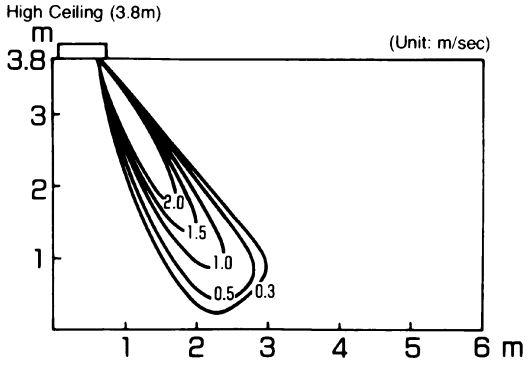

- Thin, discreet design enables mounting when the ceiling pocket is as shallow as 22 cm
- Temperature Distribution (FXKQ63MA : downward discharge angle 65° in heating.).

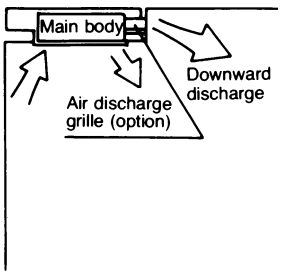

- Air velocity Distribution (FXKQ63MA : downward discharge angle 65° in heating.)

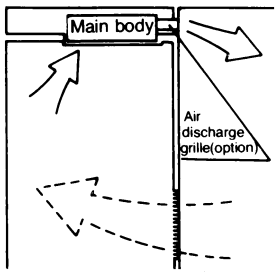

- Air volume switch built into the main body allows mounting in ceilings as high as 3.8 m. This unit is even able to handle spaces with a split level ceiling by accurately adjusting air volume in accordance with the ceiling height.

- The 63 class (equivalent to 2.5 HP) features extremely quiet operation, only 42 dBA of sound level.
- In addition to downward discharge, front discharge (straight discharge, neither angled upward nor downward) can be provided by mounting an air discharge unit (optional) to the front of the body; can be mounted even with difficult elements such as suspended ceilings and sagging walls. A combination of front and downward discharge is also possible. (Auto-swing cannot be used with front discharge.)

* Set for front discharge using a suspended ceiling

Downward discharge is shut off and air is blown straight out (front discharge)

- Equipped with a programmed drying mechanism that dehumidifies while inhibiting changes in room temperature.
- Includes as standard equipment a long-life filter that is maintenance-free for approximately one year. (Treated to mold resistant.)
- Equipped with drain pump kit that makes possible draining in the upward direction up to 500 mm from the ceiling surface.
- Decoration panel is thin and unimposing, doesn't clash with interior design and provides an excellent finishing touch for the ceiling. (Available in white.)
- If the ceiling pocket is shallow and the main body will not fit, a thick panel that provides aesthetically appealing cover for the exposed portion (up to 20 mm) is available as an option.

8. Sound Levels

Overall

■ **Ceiling Mounted Cassette Corner Type**

Note:

1. The operating conditions are assumed to be standard (JIS conditions).
2. These operating values were obtained in a dead room (conversion values).
   Sound level will vary depending on a range of factors such as the construction (acoustic absorption coefficient) of the particular room in which the equipments installed.

Drain Pump Kit

Indoor unit	Drain pump kit
FXKQ-MA	Standard (Equipped with indoor unit)

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

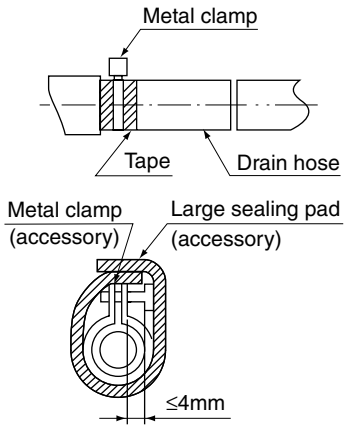

Drain Piping Work

〈〈**Rig the drain pipe as shown below and take measures against condensation. Improperly rigged piping could lead to leaks and eventually wet furniture and belongings.**〉〉

(1) Carry out the drain piping.

- Keep piping as short as possible and slope it downwards so that air may not remain trapped inside the pipe.
- The diameter of the drain pipe should be greater than or equal to the diameter of the connecting pipe (vinyl tube; pipe size : 25 mm ; outer dimension : 32 mm).
- Use the drain hose and metal clamp. Insert the drain hose into the drain socket, up to the white tape. Tighten the metal clamp until the screw head is less than 4 mm from the hose.

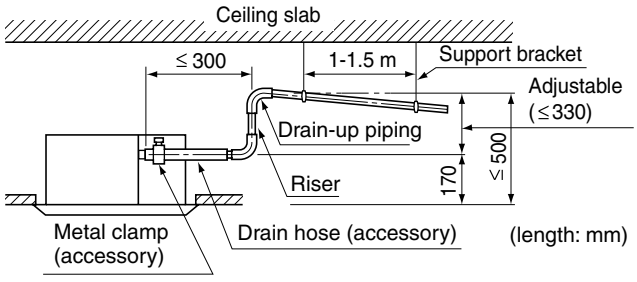

CAUTION

Setting the unit at an angle opposite to the drain piping might cause leaks.

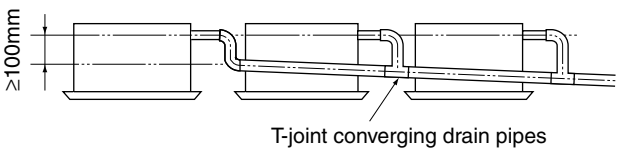

- Wrap the sealing pad over the clamp and drain hose to insulate.
- Insulate the drain hose inside the building.
  While referring to the figure on the right, insulate the clamp and drain hose with the large sealing pad.
- If the drain hose cannot be sufficiently set on a slope, execute the drain raising piping.
- Secure a downward gradient of 1 / 100 or more for the drain pipe. To accomplish this, mount supporting brackets at an interval of 1 - 1.5 m.

〈**Precautions when doing drain-up piping work.**〉

- Make sure the drain-up piping is at most 330 mm high.
- Stand the drain-up piping horizontally, and make sure it is not further than 300 mm from the base of the drain socket.

- Use the following outline if laying concentrated drain piping.
- If converging multiple drain pipes, install according to the procedure shown below.

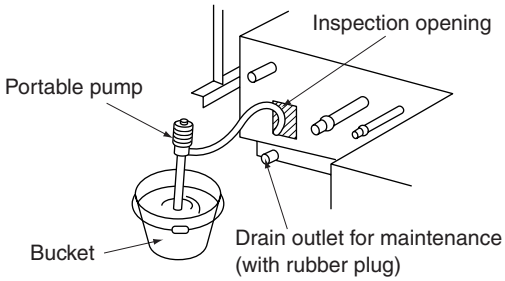

Select converging drain pipes whose gauge is suitable for the operating capacity of the unit.

3P086156-8V

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

(2) After piping work is finished, check drainage flows smoothly.
- Open the inspection opening, add approximately 1liter of water slowly into the drain pan and check drainage flow.

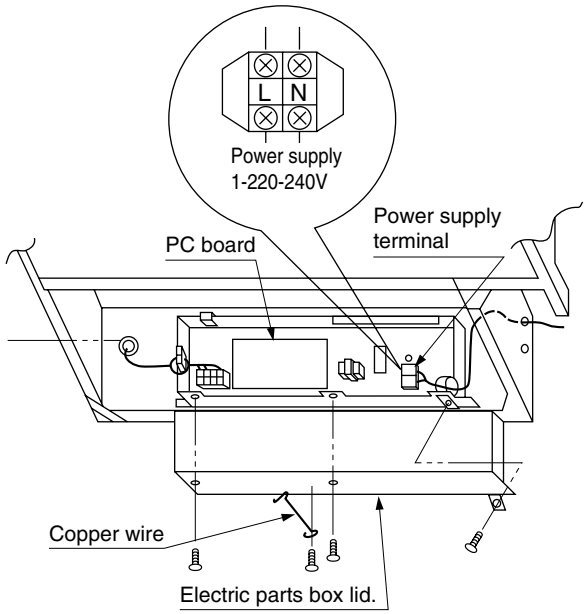

NOTE
- Use the drain outlet for maintenance to drain water from the drain pan.

WHEN ELECTRIC WIRING WORK IS FINISHED
- Check drainage flow during COOL running, explained under “TEST OPERATION”.

WHEN ELECTRIC WIRING WORK IS NOT FINISHED
- Remove the electric parts box lid, connect a power supply and remote controller to the terminals. (Refer to the **HOW TO CONNECT WIRINGS**)

Be sure attach the electric parts box lid before turning on the power.
Next, press the inspection/test operation button “ TEST ” on the remote controller. The unit will engage the test operation mode. Press the operation mode selector button “ ” until selecting FAN OPERATION “ ”. Then, press the ON/OFF button “ ”. The indoor unit fan and drain pump will start up. Check that the water has drained from the unit. Press “ TEST ” to go back to the first mode.

CAUTION
- Drain piping connections
  Do not connect the drain piping directly to sewage pipes that smell of ammonia. The ammonia in the sewage might enter the indoor unit through the drain pipes and corrode the heat exchanger.
- Keep in mind that it will become the cause of getting drain pipe blocked if water collects on drain pipe.

1. Features

Slim Ceiling Mounted Duct Type

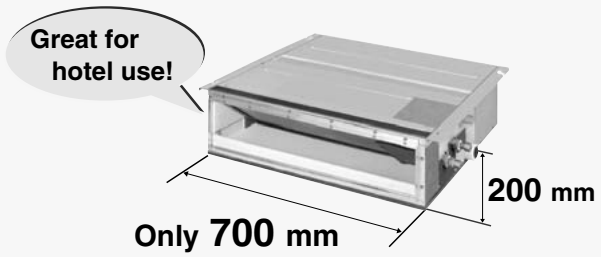

Slim design, quietness and static pressure switching

Suited to use in drop-ceilings!

New FXDQ20PB/FXDQ25PB/FXDQ32PB

- Only 700 mm in width and 23 kg in weight, this model is suitable to install in limited spaces like drop-ceilings in hotels.

New ●Control of the airflow rate has been improved from 2-step to 3-step control.

New ●Low operation sound level

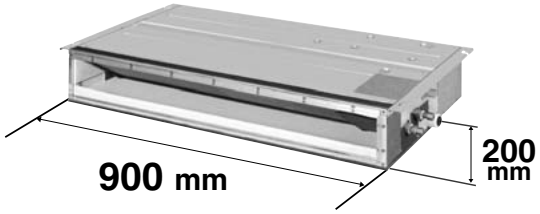

(dB(A))

FXDQ-PB/NB	20	25	32	40	50	63
Sound level (HH/H/L)	33/31/29	33/31/29	33/31/29	34/32/30	35/33/31	36/34/32

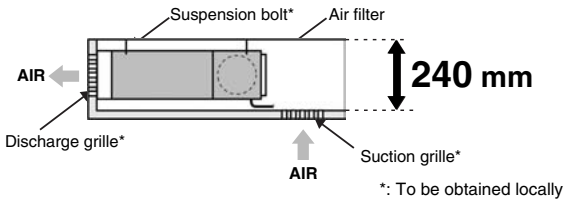

*The values of operation sound level represent those for rear-suction operation. Sound level values for bottom-suction operation can be obtained by adding 5 dB(A).
*Values are based on the following conditions: FXDQ-PB: external static pressure of 10 Pa; FXDQ-NB: external static pressure of 15 Pa.

New FXDQ40NB/FXDQ50NB/ FXDQ63NB

- Only 200 mm in height, this model can be installed in rooms with as little as 240 mm depth between the drop-ceiling and ceiling slab.

*1,100 mm in width for the FXDQ63NB model.

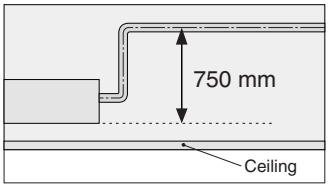

*: To be obtained locally

- External static pressure selectable by remote controller switching make this indoor unit a very comfortable and flexible model.

  10 Pa-30 Pa/factory set: 10 Pa for FXDQ-PB models.
  15 Pa-44 Pa/factory set: 15 Pa for FXDQ-NB models.

- FXDQ-PB and FXDQ-NB models are available in two types to suit different installation conditions

  FXDQ-PBVE, FXDQ-NBVE:
  with a drain pump (750 mm lift) as a standard accessory
  FXDQ-P/NBVET: without a drain pump

Drawing No.			3D060921A		

Note:

★1 Indoor temp.: 27°CDB, 19.5°CWB / outdoor temp.: 35°CDB / Equivalent piping length: 7.5m, level difference: 0m.
★2 Indoor temp.: 27°CDB, 19.0°CWB / outdoor temp.: 35°CDB / Equivalent piping length: 7.5m, level difference: 0m.
3 Capacities are net, including a deduction for cooling (an addition for heating) for indoor fan motor heat.
★4 External static pressure is changeable to set by the remote controller. This pressure means "High static pressure - Standard static pressure". (Factory setting is 10 Pa.)
★5 The operation sound levels are the conversion values in anechoic chamber. In practice, the sound tend to be larger than the specified values due to ambient noise or reflections.
When the place of suction is changed to the bottom suction, the sound level will increase by approx. 5dBA.
★6 FXDQ20 / 25 / 32PBVE only.
7 Refer to page 176 for Fan Motor Input.

Conversion Formulae
kcal/h=kW×860 Btu/h=kW×3412 cfm=m³/min×35.3

FXDQ63NBVET				1.1	15	0.13	0.9	168	168

Symbols:

MCA : Min. Circuit Amps (A)
MFA : Max. Fuse Amps (See note 5)
KW : Fan Motor Rated Output(kW)
FLA : Full Load Amps(A)
IFM : Indoor Fan Motor

Note:

1. Voltage range
   Units are suitable for use on electrical systems where voltage supplied to unit terminals is not below or above listed range limits.
2. Maximum allowable voltage unbalance between phases is 2%.
3. MCA/MFA
   MCA = 1.25 X FLA
   MFA ≦ 4 X FLA
   (Next lower standard fuse rating. Min. 15A)
4. Select wire size based on the MCA.
5. Instead of fuse, use circuit breaker.

C : 4D060922

11. Installation

CONTENTS

1. SAFETY PRECAUTIONS 1
2. BEFORE INSTALLATION 2
3. SELECTING INSTALLATION SITE 3
4. PREPARATIONS BEFORE INSTALLATION 4
5. INDOOR UNIT INSTALLATION 5
6. REFRIGERANT PIPING WORK 5
7. DRAIN PIPING WORK 7
8. INSTALLING THE DUCT 9
9. ELECTRIC WIRING WORK 9
10. WIRING EXAMPLE 10
11. FIELD SETTING AND TEST RUN 13

1. SAFETY PRECAUTIONS

Please read these “SAFETY PRECAUTIONS” carefully before installing air conditioning equipment and be sure to install it correctly.
After completing installation, conduct a trial operation to check for faults and explain to the customer how to operate the air conditioner and take care of it with the aid of the operation manual.
Ask the customer to store the installation manual along with the operation manual for future reference.
This air conditioner comes under the term “appliances not accessible to the general public”.
This unit is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.
Meaning of WARNING and CAUTION notices

⚠ **WARNING** ..... Failure to follow these instructions properly may result in personal injury or loss of life.

⚠ **CAUTION** ..... Failure to observe these instructions properly may result in property damage or personal injury, which may be serious depending on the circumstances.

⚠ WARNING

- Ask your dealer or qualified personnel to carry out installation work.
  Do not attempt to install the air conditioner yourself. Improper installation may result in water leakage, electric shocks or fire.
- Install the air conditioner in accordance with the instructions in this installation manual.
  Improper installation may result in water leakage, electric shocks or fire.
- Consult your local dealer regarding what to do in case of refrigerant leakage. When the air conditioner is to be installed in a small room, it is necessary to take proper measures so that the amount of any leaked refrigerant does not exceed the concentration limit in the event of a leakage.
  Otherwise, this may lead to an accident due to oxygen depletion.
- Be sure to use only the specified accessories and parts for installation work.
  Failure to use the specified parts may result in the unit falling, water leakage, electric shocks or fire.
- Install the air conditioner on a foundation strong enough to withstand the weight of the unit.
  A foundation of insufficient strength may result in the equipment falling and causing injury.
- Carry out the specified installation work after taking into account strong winds, typhoons or earthquakes.
  Failure to do so during installation work may result in the unit falling and causing accidents.
- Make sure that a separate power supply circuit is provided for this unit and that all electrical work is carried out by qualified personnel according to local laws and regulations and this installation manual.
  An insufficient power supply capacity or improper electrical construction may lead to electric shocks or fire.
- Make sure that all wiring is secured, the specified wires are used, and that there is no strain on the terminal connections or wires.
  Improper connections or securing of wires may result in abnormal heat build-up or fire.
- When wiring the power supply and connecting the remote controller wiring and transmission wiring, position the wires so that the control box lid can be securely fastened.
  Improper positioning of the control box lid may result in electric shocks, fire or the terminals overheating.
- If refrigerant gas leaks during installation, ventilate the area immediately.
  Toxic gas may be produced if the refrigerant comes into contact with fire.
- After completing installation, check for refrigerant gas leakage.
  Toxic gas may be produced if the refrigerant gas leaks into the room and comes into contact with a source of fire, such as a fan heater, stove or cooker.
- Be sure to switch off the unit before touching any electrical parts.
- Do not touch the switch with wet fingers.
  Touching the switch with wet fingers can cause electric shock.
- Be sure to earth the air conditioner.
  Do not earth the unit to a utility pipe, lightning conductor or telephone earth lead.
  Imperfect earthing may result in electric shocks or fire.
  A high surge current from lightning or other sources may cause damage to the air conditioner.
- Be sure to install an earth leakage breaker.
  Failure to install an earth leakage breaker may result in electric shocks or fire.

⚠ CAUTION

- While following the instructions in this installation manual, install drain piping to ensure proper drainage and insulate piping to prevent condensation.
  Improper drain piping may result in indoor water leakage and property damage.
- Install the indoor and outdoor units, power cord and connecting wires at least 1 meter away from televisions or radios to prevent picture interference and noise.
  (Depending on the incoming signal strength, a distance of 1 meter may not be sufficient to eliminate noise.)
- Remote controller (wireless kit) transmitting distance can be shorter than expected in rooms with electronic fluorescent lamps (inverter or rapid start types).
  Install the indoor unit as far away from fluorescent lamps as possible.
- Do not install the air conditioner in the following locations:
  1. Where there is a high concentration of mineral oil spray or vapour (e.g. a kitchen).
     Plastic parts will deteriorate, parts may fall off and water leakage could result.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2. Where corrosive gas, such as sulphurous acid gas, is produced.
   Corroding of copper pipes or soldered parts may result in refrigerant leakage.
3. Near machinery emitting electromagnetic radiation.
   Electromagnetic radiation may disturb the operation of the control system and result in a malfunction of the unit.
4. Where flammable gas may leak, where there is carbon fibre or ignitable dust suspensions in the air, or where volatile flammables such as paint thinner or gasoline are handled.
   Operating the unit in such conditions may result in fire.

- Do not touch the heat exchanger fins.
  Improper handling may result in injury.
- Be very careful about product transportation.
  Some products use PP bands for packaging. Do not use any PP bands for a means of transportation. It is dangerous.
- Safely dispose of the packing materials.
  Packing materials, such as nails and other metal or wooden parts, may cause stabs or other injuries.
  Tear apart and throw away plastic packaging bags so that children will not play with them. If children play with a plastic bag which was not torn apart, they face the risk of suffocation.
- Do not turn off the power immediately after stopping operation.
  Always wait at least 5 minutes before turning off the power. Otherwise, water leakage and trouble may occur.
- In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

Follow national standards for installation work.

2. BEFORE INSTALLATION

The accessories needed for installation must be retained in your custody until the installation work is completed. Do not discard them!

1. Decide upon a line of transport.
2. Leave the unit inside its packaging while moving, until reaching the installation site. Where unpacking is unavoidable, use a sling of soft material or protective plates together with a rope when lifting, to avoid damage or scratches to the unit.

When moving the unit at or after opening, hold the unit by the hanger brackets. Do not apply force to the refrigerant piping, drain piping or flange parts.

Be sure to check the type of R410A refrigerant to be used before installing the unit.
(Using an incorrect refrigerant will prevent normal operation of the unit.)

For the installation of an outdoor unit, refer to the installation manual attached to the outdoor unit.

2-1 PRECAUTIONS

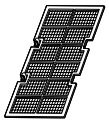

- Be sure to instruct customers how to properly operate the unit (operating different functions, and adjusting the temperature) by having them carry out operations themselves while looking at the operation manual.
- Do not install in locations where the air contains high levels of salt such as that near the ocean and where voltage fluctuates greatly such as that in factories, or in vehicles or vessels.

2-2 ACCESSORIES

Check the following accessories are included with your unit.

Name	Metal clamp (1)	Drain hose (2)	Insulation for fitting	Sealing pad
Quantity	1 pc.	1 pc.	1 each	1 each
Shape			for liquid pipe (3)  for gas pipe (4)	 Large (5) mid. (6)

Name	Screws for duct flanges (7)	Washer for hanging bracket (8)	Clamp	Washer fixing plate (11)
Quantity	1 set	8 pcs.	1 set	4 pcs.
Shape	 26 pcs.		 Large (9) 8 pcs.  small (10) 4 pcs.	

Name	Sealing material (12)	Air filter (13)	(Other) • Operation manual • Product quality certificate • Installation manual (this manual)
Quantity	2 pcs.	1 pc.	
Shape			

2-3 OPTIONAL ACCESSORIES

- This indoor unit requires one of the operation remote controls listed below.

Remote controller	
Wired type	BRC1C62
Wireless type (Heat pump type/ Cooling only type)	BRC4C65/BRC4C66

FOR THE FOLLOWING ITEMS, TAKE SPECIAL CARE DURING CONSTRUCTION AND CHECK AFTER INSTALLATION IS FINISHED.

a. Items to be checked after completion of work

Items to be checked	If not properly done, what is likely to occur	Check
Are the indoor and outdoor unit fixed firmly?	The units may drop, vibrate or make noise.	
Is the gas leak test finished?	It may result in insufficient cooling.	
Is the unit fully insulated?	Condensate may drip.	
Does drainage flow smoothly?	Condensate may drip.	
Does the power supply voltage correspond to that shown on the name plate?	The unit may malfunction or the components burn out.	
Are wiring and piping correct?	The unit may malfunction or the components burn out.	
Is the unit safely grounded?	Imcomplete grounding may result in electric shocks.	
Is wiring size according to specifications?	The unit may malfunction or the components burn out.	

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Is something blocking the air outlet or inlet of either the indoor or outdoor units?	It may result in insufficient cooling.	
Are refrigerant piping length and additional refrigerant charge noted down?	The refrigerant charge in the system is not clear.	

Also review the “SAFETY PRECAUTIONS”.

b. Items to be checked at time of delivery

Items to be checked	Check
Did you explain about operations while showing the operation manual to your customer?	
Did you hand the operation manual and warranty over to your customer?	
Did you explain about the way of maintaining and cleaning local procurements (air filter, grille (both air outlet and suction grille), etc.) to your customer?	
Did you hand manuals of local procurements (in case equipped) over to your customer?	

c. Points for explanation about operations

The items with ⚠ WARNING and ⚠ CAUTION marks in the operation manual are the items pertaining to possibilities for bodily injury and material damage in addition to the general usage of the product. Accordingly, it is necessary that you make a full explanation about the described contents and also ask your customers to read the operation manual.

3. SELECTING INSTALLATION SITE

⚠ CAUTION

- When moving the unit during or after unpacking, make sure to lift it by holding its lifting lugs. Do not exert any pressure on other parts, especially the refrigerant piping, drain piping and flange parts.
- If you think the humidity inside the ceiling might exceed 30˚C and RH80%, reinforce the insulation on the unit body. Use glass wool or polyethylene foam as insulation so that it is no thicker than 10mm and fits inside the ceiling opening.

(1) Select an installation site where the following conditions are fulfilled and that meets with your customer’s approval.
- Where optimum air distribution can be ensured.
- Where nothing blocks air passage.
- Where condensate can be properly drained.
- Where the ceiling is strong enough to bear the indoor unit weight.
- Where the false ceiling is not noticeably on an incline.
- Where there is no risk of flammable gas leakage.
- Where sufficient clearance for maintenance and service can be ensured. **(Refer to Fig. 1)**
- Where piping between indoor and outdoor units is possible within the allowable limit. (Refer to the installation manual for the outdoor unit.)

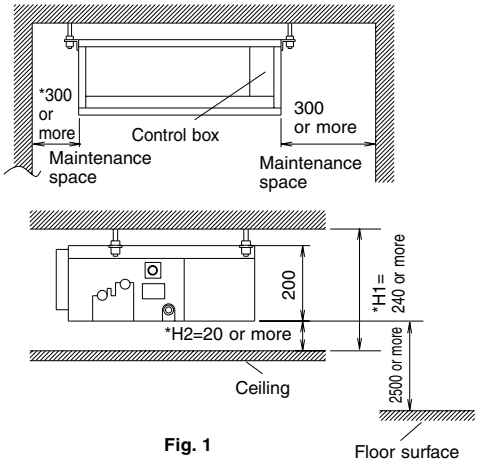

Fig. 1

(length : mm)

- *H1 dimension means the minimum height of the unit.
- Select the *H1, *H2 dimension such that a downward slope of at least 1/100 is ensured as indicated in “**7. DRAIN PIPING WORK**”.
- The maintenance space marked with “*” is required when the installation box for adaptor PC board (KRP1BA101) sold separately is used.

[PRECAUTION]
- Install the indoor and outdoor units, power supply wiring and connecting wires at least 1 m away from televisions or radios in order to prevent image interference or noise. (Depending on the radio waves, a distance of 1 m may not be sufficient enough to eliminate the noise.)
- If installing the wireless kit in a room with electronic fluorescent lighting (inverter or rapid start type), the remote controller’s transmission distance may be shortened. Indoor units should be installed as far away from fluorescent lighting as possible.

(2) Use suspension bolts for installation. Check whether the ceiling is strong enough to support the weight of the unit or not. If there is a risk, reinforce the ceiling before installing the unit.
(Installation pitch is marked on the carton box for installation. Refer to it to check for points requiring reinforcing.)

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

4. PREPARATIONS BEFORE INSTALLATION

(1) Confirm the positional relationship between the unit and suspension bolts. (Refer to Fig. 2)

- Install the inspection opening on the control box side where maintenance and inspection of the control box and drain pump are easy. Install the inspection opening also in the lower part of the unit.

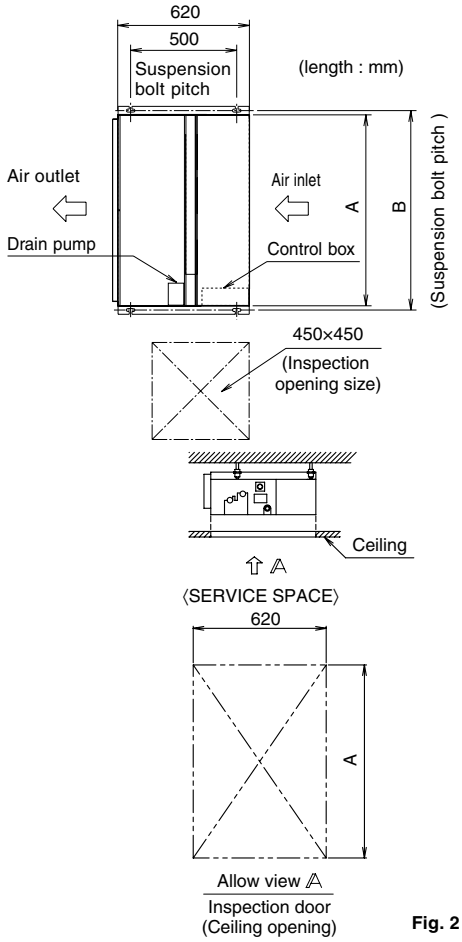

Fig. 2

(length: mm)

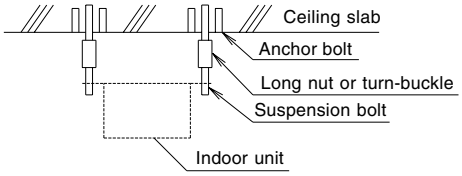

Model	A	B
20 · 25 · 32 type	700	740
40 · 50 type	900	940
63 type	1100	1140

(2) Make sure the range of the unit's external static pressure is not exceeded.
(See the technical documentation for the range of the external static pressure setting.)

(3) Open the installation hole. (Pre-set ceilings)

- Once the installation hole is opened in the ceiling where the unit is to be installed, pass refrigerant piping, drain piping, transmission wiring, and remote controller wiring (It is not necessary if using a wireless remote controller) to the unit's piping and wiring holes.
  See "**6. REFRIGERANT PIPING WORK**", "**7. DRAIN PIPING WORK**", and "**10. WIRING EXAMPLE**".
- After opening the ceiling hole, make sure ceiling is level if needed. It might be necessary to reinforce the ceiling frame to prevent shaking.
  Consult an architect or carpenter for details.

(4) Install the suspension bolts.
(Use W3/8 to M10 suspension bolts.)
Use a hole-in-anchor for existing ceilings, and a sunken insert, sunken anchor or other part to be procured in the field to reinforce the ceiling to bearing the weight of the unit for new ceiling. **(Refer to Fig. 3)**

Note: All the above parts are field supplied.

Fig. 3

(5) For bottom intake, replace the chamber lid and protection net in the procedure listed in Fig. 4.

(1) Remove the protection net. (6 locations)···PBVE(T) type only
Remove the chamber lid. (7 locations)

(2) Reattached the removed chamber lid in the orientation shown in Fig. 4. (7 locations)
Reattached the removed protection net in the orientation shown in Fig. 4. (6 locations)···PBVE(T) type only

(3) Attach the air filter (accessory) in the manner shown in the diagram.
The four holes which cannot be covered by the air filter should be covered with commercially available tape.

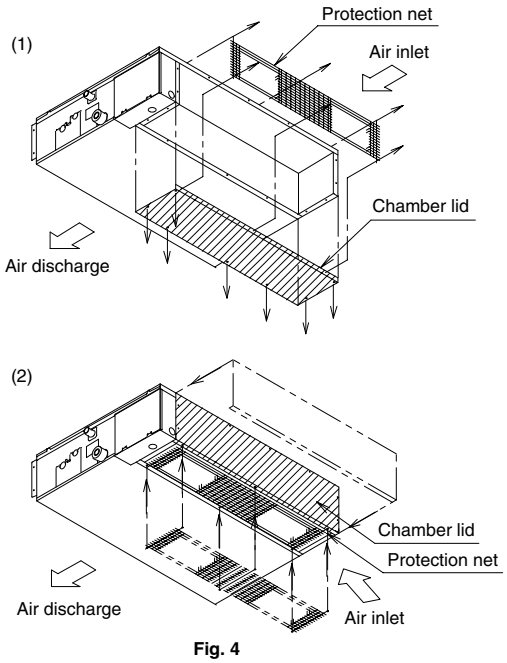

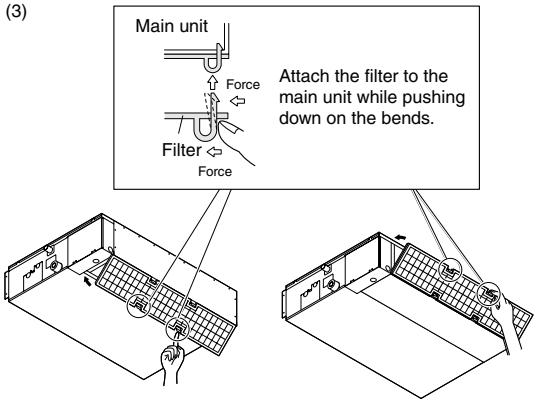

Fig. 4

3PN09042-1A

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

(3)

In case of bottom side In case of back side

5. INDOOR UNIT INSTALLATION

〈〈As for the parts to be used for installation work, be sure to use the provided accessories and specified parts designated by our company.〉〉

(1) Install the indoor unit temporarily.

- Attach the hanger bracket to the suspension bolt. Be sure to fix it securely by using a nut and washer from the upper and lower sides of the hanger bracket. **(Refer to Fig. 5)**

[Securing the hanger bracket] [How to secure washers]

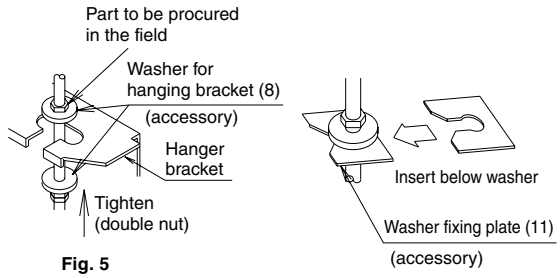

Fig. 5

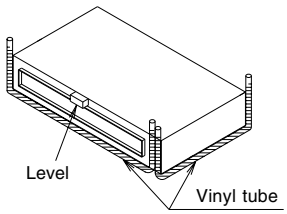

[PRECAUTION]
Since the unit uses a plastic drain pan, prevent welding spatter and other foreign substances from the air outlet during installation.

(2) Adjust the height of the unit.

(3) Check the unit is horizontally level.

⚠ CAUTION

- **Make sure the unit is installed level using a level or a plastic tube filled with water. In using a plastic tube instead of a level, adjust the top surface of the unit to the surface of the water at both ends of the plastic tube and adjust the unit horizontally. (One thing to watch out for in particular is if the unit is installed so that the slope is not in the direction of the drain piping, this might cause leaking.)**

(4) Tighten the upper nut.

6. REFRIGERANT PIPING WORK

〈For refrigerant piping of outdoor units, see the installation manual attached to the outdoor unit.〉
〈Execute heat insulation work completely on both sides of the gas piping and the liquid piping. Otherwise, a water leakage can result sometimes.
Use insulation that can withstand temperatures of at least 120˚C. Reinforce the insulation on the refrigerant piping according to the installation environment. If the temperature above the ceiling might reach 30˚C or the humidity RH80%. Condensation may form on the surface of the insulation.〉

⚠ CAUTION

Follow the points at below.

- Use a pipe cutter and flare suitable for the type of refrigerant.
- Apply ester oil or ether oil to the flare section when using a flare connection.
- Only use the flare nuts included with the unit. Using different flare nuts may cause the refrigerant to leak.
- To prevent dust, moisture or other foreign matter from infiltrating the piping, either pinch the end or cover it with tape.
- Do not allow anything other than the designated refrigerant to get mixed into the refrigerant circuit, such as air, etc. If any refrigerant gas leaks while working on the unit, ventilate the room thoroughly right away.

(1) Connect the piping.

- The outdoor unit is charged with refrigerant.
- Be sure to use both a spanner and torque wrench together, as shown in the drawing, when connecting or disconnecting pipes to/from the unit. **(Refer to Fig. 6)**

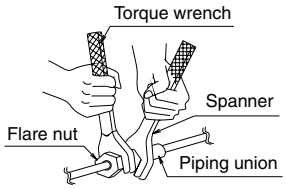

Fig. 6

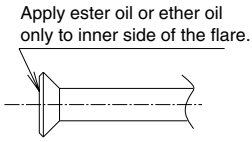

Fig. 7

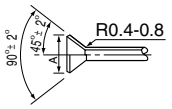

- Refer to the Table 1 for the dimensions of flare nut spaces.
- Apply ether oil or ester oil only to inner side of the flare when using flare nut connections and then turn 3 or 4 times by hand. **(Refer to Fig. 7)**

C : 3PN09042-1A

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

• Refer to Table 1 for tightening torque.

Table 1

Pipe size	Tightening torque	Flare dimension A (mm)	Flare shape
ϕ 6.4 (1/4")	14.2 – 17.2 N·m (144 – 176 kgf·cm)	8.7 – 9.1	
ϕ 9.5 (3/8")	32.7 – 39.9 N·m (333 – 407 kgf·cm)	12.8 – 13.2	
ϕ 12.7 (1/2")	49.5 – 60.3 N·m (504 – 616 kgf·cm)	16.2 – 16.6	
ϕ 15.9 (5/8")	61.8 – 75.4 N·m (630 – 770 kgf·cm)	19.3 – 19.7	

⚠ CAUTION

Overtightening may damage the flare and cause leaks. Be careful for oil not to adhere to any portions other than a flare part. If oil adhere to resin parts etc., there is a possibility of damaging by deterioration.

• Refer to Table 2 if no torque wrench is available.
Using a wrench to tighten flare nuts causes the tightening torque to suddenly grow much tighter after a certain point. From there, tighten the nut further by the appropriate angle listed in Table 2.

(2) After the work is finished, make sure to check that there is no gas leak.

(3) After checking for gas leaks, be sure to insulate the pipe connections referring to Fig. 8.
- Insulate using the insulation for fitting (3) (4) included with the liquid and gas pipes. Besides, make sure the insulation for fitting (3) (4) on the liquid and gas piping has its seams facing up.
(Tighten both edges with clamp (9).)
- For the gas piping, wrap the mid. sealing pad (6) over the insulation for fitting (4) (flare nut part).

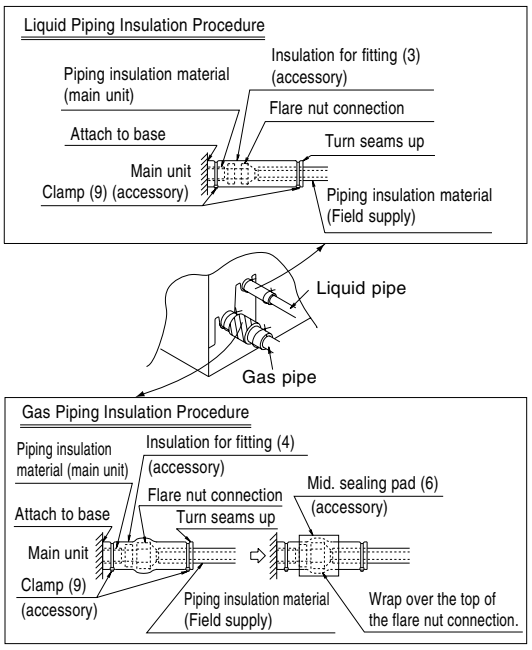

Fig. 8

⚠ CAUTION

Be sure to insulate any field piping all the way to the piping connection inside the unit. Any exposed piping may cause condensation or burns if touched.

• When brazing the refrigerant piping, perform nitrogen replacement first, or perform the brazing (CAUTION 2) while feeding nitrogen into the refrigerant piping (CAUTION 1), and finally connect the indoor unit using the flare connections. **(Refer to Fig. 9)**

⚠ CAUTION

1. When brazing a pipe while feeding nitrogen inside the pipe, make sure to set the nitrogen pressure to 0.02 MPa (0.2 kg/cm^2) using the pressure reducing valve. (This pressure is such that breeze is blown to your cheek.)
2. Do not use a flux when brazing the refrigerant pipe joints. Use phosphor copper brazer (BCuP-2: JIS Z 3264/B-Cu93P-710/795: ISO 3677) which does not require flux. (Using a flux containing chlorine may cause the piping to corrode. Using a welding flux containing fluorine may cause the refrigerant lubricant to deteriorate, and affect adversely the refrigerant piping system.)

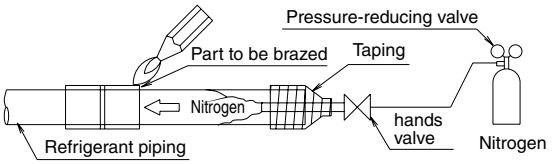

Fig. 9

Not recommendable but in case of emergency

You must use a torque wrench but if you are obliged to install the unit without a torque wrench, you may follow the installation method mentioned below.

After the work is finished, make sure to check that there is no gas leak.

When you keep on tightening the flare nut with a spanner, there is a point where the tightening torque suddenly increases. From that position, further tighten the flare nut the angle shown below:

Table 2

Pipe size	Further tightening angle	Recommended arm length of tool
ϕ 6.4 (1/4")	60 to 90 degrees	Approx. 150mm
ϕ 9.5 (3/8")	60 to 90 degrees	Approx. 200mm
ϕ 12.7 (1/2")	30 to 60 degrees	Approx. 250mm
ϕ 15.9 (5/8")	30 to 60 degrees	Approx. 300mm

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

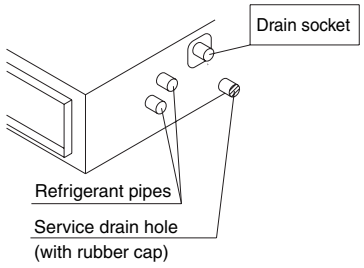

7. DRAIN PIPING WORK

In case of PBVE, NBVE type (with drain pump)

⚠ CAUTION

- The connection opening on the drain piping may vary depending on the model, so check the model name and use the right method for that model.
- Make sure all water is out before making the duct connection.

(1) Install the drain piping.

- Make sure the drain works properly.
- The diameter of the drain piping should be greater than or equal to the diameter of the connecting pipe (vinyl tube; pipe size: 20 mm; outer dimension: 26 mm).
  (not including the riser)
- Keep the drain piping short and sloping downwards at a gradient of at least 1/100 to prevent air pockets from forming. **(Refer to Fig. 10)**

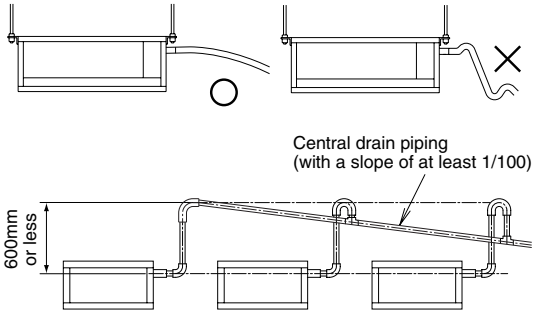

Fig. 10

⚠ CAUTION

Water accumulating in the drain piping can cause the drain to clog.

- To keep the drain piping from sagging, space hanging bracket every 1 to 1.5 m.
- Use the drain hose (2) and the metal clamp (1). Insert the drain hose (2) fully into the drain socket and firmly tighten the metal clamp (1) with the upper part of the tape on the hose end. Tighten the metal clamp (1) until the screw head is less than 4 mm from the hose. **(Refer to Fig. 11, 12)**
- The two areas below should be insulated because condensation may form there causing water to leak.
  - Drain piping passing indoors
  - Drain socket

  Referring the figure below, insulate the metal clamp (1) and drain hose (2) using the included large sealing pad (5). **(Refer to Fig. 12)**

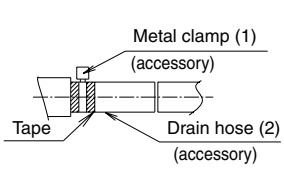

Fig. 11

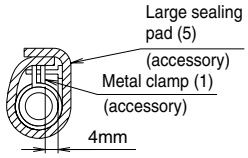

Fig. 12

〈 PRECAUTIONS FOR DRAIN RAISING PIPE 〉

- Make sure the drain raising pipe height is no higher than 600mm.
- Place the drain raising pipe vertically and make sure it is no further than 300mm from the unit. **(Refer to Fig. 13)**

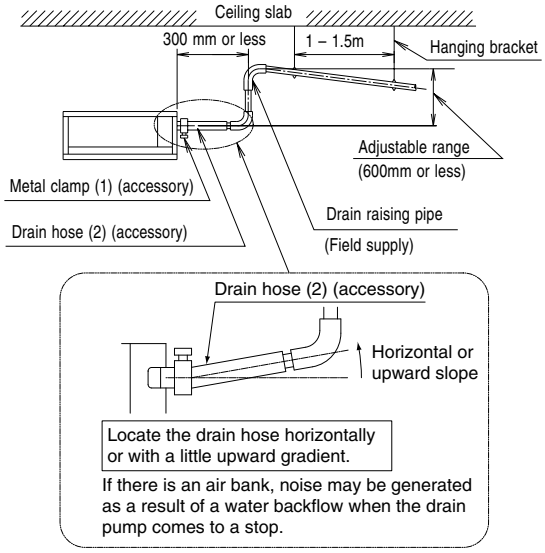

Fig. 13

〈 PRECAUTIONS 〉

Drain piping connections

- Do not connect the drain piping directly to sewage pipes that smell of ammonia. The ammonia in the sewage might enter the indoor unit through the drain piping and corrode the heat exchanger.
- Do not twist or bend the drain hose (2), so that excessive force is not applied to it.
  (This type of treatment may cause leaking.)
- If you are using central drain piping, follow the procedure outlined in the figure 10.
- Select central drain piping of proper size according to the capacity of the connected unit.

(2) After piping work is finished, check drainage flows smoothly, with manner described below.

⚠ CAUTION

- The electric wiring work shall be performed by qualified electricians.
- If workers not having the electrician qualification have performed the electric wiring work, the steps 3 to 7 shall be performed after the **TEST RUN**.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

1. Remove the control box lid. Connect the remote controller and power supply (single-phase, 50 Hz 220-240 V or single-phase, 60Hz 220V) respectively to the terminal block and securely connect the earth also (as shown in the figure below).

⚠ CAUTION

Securely clamp the cables with the clamps (9)(10) offered as accessories as shown in Fig. 17 so that tension will not be applied on the cable connection areas.

2. Confirm that the control box lid is closed before turning on the power.
3. Remove the inspection lid.
4. Gradually pour approximately 1L of water from the inspection window into the drain pan to check drainage.

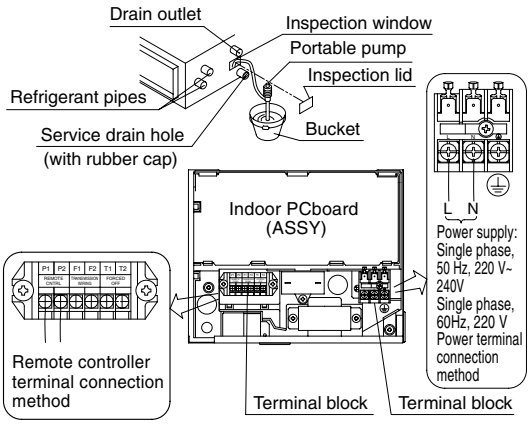

⚠ CAUTION

Be sure to prevent an external force from being exerted on the float switch.
(This may cause breakage.)

5. Attach the inspection lid.
6. Perform the following operation using the remote controller, and check drainage.
   - Select the inspection/test operation button "TEST" using the remote controller. The unit will engage the test operation. Press the operation selector button "❄", and select FAN OPERATION "".
   - Press the ON/OFF button "⏻". (The indoor fan and drain pump will operate.)

⚠ CAUTION

The fan will turn also at the same time. Take due care.
Do not touch the drain pump to prevent electric shock.

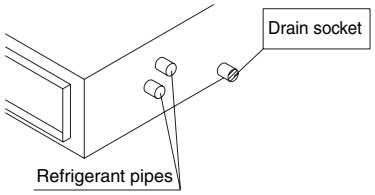

7. Make sure to use the remote controller in finishing the operation.

In case of PBVET, NBVET type (without drain pump)

⚠ CAUTION

- The connection opening on the drain piping may vary depending on the model, so check the model name and use the right method for that model.
- Make sure all water is out before making the duct connection.

(1) Install the drain piping.

Connect the drain pipe after removing the rubber cap and insulation tubing attached to the connection hole.

- Make sure the drain works properly.
- The diameter of the drain piping should be greater than or equal to the diameter of the connecting pipe (vinyl tube; pipe size: 20 mm; outer dimension: 26 mm).
  (not including the riser)
- Keep the drain piping short and sloping downwards at a gradient of at least 1/100 to prevent air pockets from forming.
  (Refer to Fig. 14)

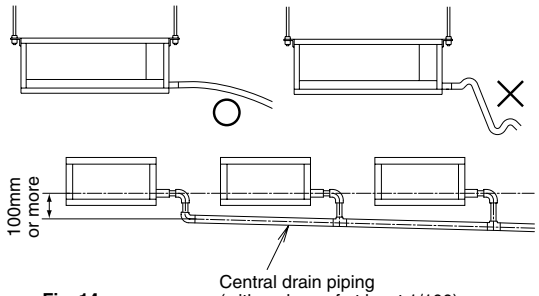

Fig. 14

⚠ CAUTION

Water accumulating in the drain piping can cause the drain to clog.

- To keep the drain piping from sagging, space hanging bracket every 1 to 1.5 m.
- Use the drain hose (2) and the metal clamp (1). Insert the drain hose (2) fully into the drain socket and firmly tighten the metal clamp (1) with the upper part of the tape on the hose end. Tighten the metal clamp (1) until the screw head is less than 4 mm from the hose. **(Refer to Fig. 15, 16)**
- The two areas below should be insulated because condensation may form there causing water to leak.
  - Drain piping passing indoors
  - Drain socket

  Referring the figure below, insulate the metal clamp (1) and drain hose (2) using the included large sealing pad (5).
  (Refer to Fig. 16)

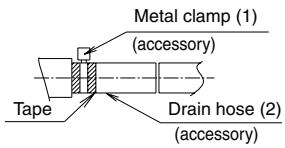

Fig. 15

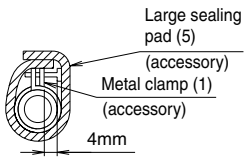

Fig. 16

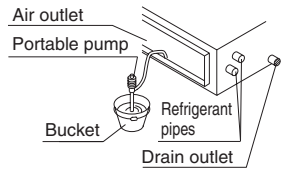

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

〈 PRECAUTIONS 〉

Drain piping connections

- Do not connect the drain piping directly to sewage pipes that smell of ammonia. The ammonia in the sewage might enter the indoor unit through the drain piping and corrode the heat exchanger.
- Do not twist or bend the drain hose (2), so that excessive force is not applied to it.
  (This type of treatment may cause leaking.)
- If you are using central drain piping, follow the procedure outlined in the figure 14.
- Select central drain piping of proper size according to the capacity of the connected unit.

(2) After piping work is finished, check drainage flows smoothly, with manner described below.

- Gradually pour approximately 1L of water from the outlet hole into the drain pan to check drainage.
- Check the drainage.

8. INSTALLING THE DUCT

Connect the duct supplied in the field.

Air inlet side

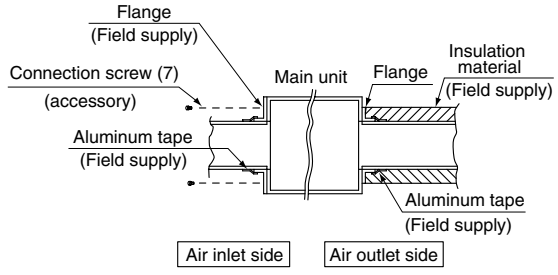

- Attach the duct and intake-side flange (field supply).
- Connect the flange to the main unit with accessory screws (7).

Class	20 · 25 · 32	40 · 50	63
Number of positions	16	22	26

- Wrap the intake-side flange and duct connection area with aluminum tape or something similar to prevent air escaping.

⚠ CAUTION

When attaching a duct to the intake side, be sure to attach an air filter inside the air passage on the intake side. (Use an air filter whose dust collecting efficiency is at least 50% in a gravimetric technique.)
The included filter is not used when the intake duct is attached.

Air outlet side

- Connect the duct according to the air inside of the outlet-side flange.
- Wrap the outlet-side flange and the duct connection area with aluminum tape or something similar to prevent air escaping.

⚠ CAUTION

- Be sure to insulate the duct to prevent condensation from forming. (Material: glass wool or polyethylene foam, 25 mm thick)
- Use electric insulation between the duct and the wall when using metal ducts to pass metal laths of the net or fence shape or metal plating into wooden buildings.
- Be sure to explain about the way of maintaining and cleaning local procurements (air filter, grille (both air outlet and suction grille), etc.) to your customer.

9. ELECTRIC WIRING WORK

9-1 GENERAL INSTRUCTIONS

- Shut off the power before doing any work.
- All field supplied parts and materials, electric works must conform to local codes.
- Use copper wire only.
- See also the “Wiring Diagram plate” attached to the control box lid when laying electrical wiring.
- For details on hooking up the remote controller, refer to the “REMOTE CONTROLLER INSTALLATION MANUAL”.
- All wiring must be performed by an authorized electrician.
- This system consists of multiple indoor units. Mark each indoor unit as unit A, unit B . . . , and be sure the terminal board wiring to the outdoor unit and BS unit are properly matched. If wiring and piping between the outdoor unit and an indoor unit are mismatched, the system may cause a malfunction.
- A circuit breaker capable of shutting down power supply to the entire system must be installed.
- Refer to the installation manual attached to the outdoor unit for the size of power supply wiring connected to the outdoor unit, the capacity of the circuit breaker and switch, and wiring instructions.
- Be sure to ground the air conditioner.
- Do not the earth wire should come in contact with gas pipes, water pipes, lightning rods, or telephone earth wires.
  - Gas pipes: gas leaks can cause explosions and fire.
  - Water pipes: they cannot be grounded if hard vinyl pipes are used.
  - Telephone earth wire and lightning rods: the ground potential when struck by lightning gets extremely high.
- To avoid short circuiting the power supply wire, be sure to use insulated terminals.
- Do not turn on the power supply (circuit breaker or earth leakage breaker) until all other work is done.

9-2 SPECIFICATIONS FOR FIELD SUPPLIED FUSES AND WIRE

Power-related

Model	Power supply wiring (including earth wire)			
	Number of units	Field fuses ⊟	Wire	Size
20 · 25 · 32 type	1	15A	H05VV-U3G (NOTE 1)	Size must comply with local codes.
40 · 50 type				
63 type				

Model	Transmission wiring Remote controller wiring	
	Wire	Size (mm^2)
20 · 25 · 32 type	Sheathed vinyl cord or cable (2 wires) (NOTE 2)	0.75 - 1.25
40 · 50 type		
63 type		

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

NOTES

1. Shows only in case of protected pipes. Use H07RN-F in case of no protection.
2. Insulated thickness : 1mm or more.
3. If the wiring is in a place where people it can be easily touched by people, install an earth leakage breaker to prevent electric shock.
4. When using an earth leakage breaker, make sure to select one useful also to protection against overcurrent and short-circuit.
   When using an earth leakage breaker only for earth device, make sure to use a wiring interrupter together.

- The length of the transmission wiring and remote controller wiring are as follows.

Length of the transmission wiring and remote controller wiring

Outdoor unit – Indoor unit	Max. 1000m (Total wiring length: 2000m)
Indoor unit – Remote controller	Max. 500m

9-3 ELECTRICAL CHARACTERISTICS

Units				Power supply		Fan motor	
Model	Hz	Volts	Voltage range	MCA	MFA	KW	FLA
20 · 25 · 32 PBVE	50	220-240	Min. 198 Max. 264	0.8	15	0.062	0.6
20 · 25 · 32 PBVET				0.7		0.062	0.6
40 NBVE(T)				1.0		0.062	0.8
50 NBVE(T)				1.0		0.13	0.8
63 NBVE(T)				1.1		0.13	0.9
20 · 25 · 32 PBVE	60	220	Min. 198 Max. 242	0.9	15	0.062	0.7
20 · 25 · 32 PBVET				0.8		0.062	0.7
40 NBVE(T)				1.1		0.062	0.9
50 NBVE(T)				1.3		0.13	1.0
63 NBVE(T)				1.4		0.13	1.1

MCA: Minimum Circuit Amps (A) MFA:Max. Fuse Amps (A)
KW: Fan motor output (kW) FLA:Full Load Amps (A)

10. WIRING EXAMPLE

10-1 HOW TO CONNECT WIRINGS

- Wire only after removing the control box lid as shown in Fig. 17.

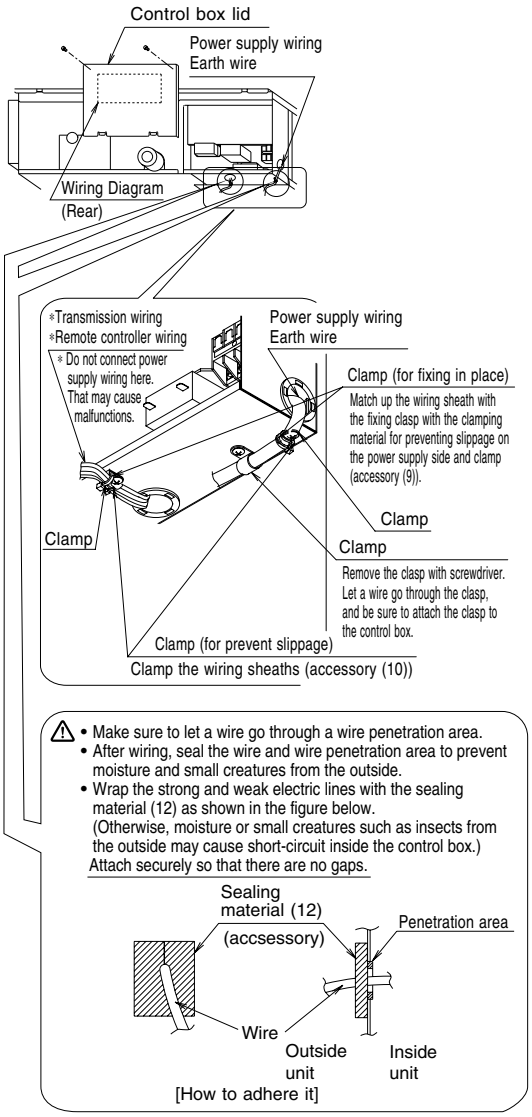

Fig. 17

⚠ CAUTION

- When clamping the wiring, use the included clamp material (9) and (10) as shown in the Fig.17 to prevent outside pressure being exerted on the wiring connections and clamp firmly.
- Be sure to attach power supply wiring and earth wire to the control box with the clamp.
- When doing the wiring, make sure the wiring is neat and does not cause the control box lid to stick up, then close the cover firmly. When attaching the control box lid, make sure you do not pinch any wires.
- Outside the air conditioners, separate the weak wiring (remote controller and transmission wiring) and strong wiring (earth wire and power supply wiring) at least 50 mm so that they do not pass through the same place together. Proximity may cause electrical interference, malfunctions, and breakage.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

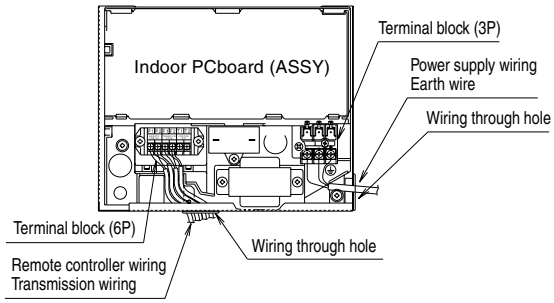

[PRECAUTIONS]

- Refer to the "REMOTE CONTROLLER INSTALLATION MANUAL" on how to install and lay the wiring for the remote controller.
- See also the "Wiring Diagram plate" attached to the control box lid when laying electrical wiring.
- Connect the remote controller and transmission wiring their respective terminal blocks.

⚠ CAUTION

- **Do not, under any circumstances, connect the power supply wiring to the remote controller or transmission wiring terminal block. Doing so can destroy the entire system.**

[Connecting electrical wiring, remote controller wiring, and transmission wiring] (Refer to Fig. 18)

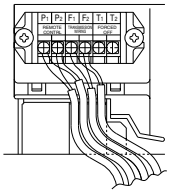

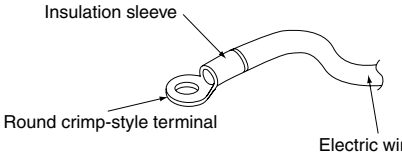

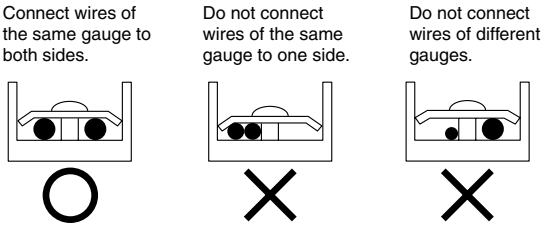

Fig. 18

- **Power supply and Earth wiring**
  Remove the control box lid.
  Next, pull the wires into the unit through the wiring through hole and connect to the terminal block (3P).
  Be sure to put the part of the sheathed vinyl into the control box.
- **Remote controller and transmission wiring**
  Pull the wires into the unit through the wiring through hole and connect to the terminal block (6P).
  Be sure to put the part of the sheathed vinyl into the control box.

<Precautions when laying power supply wiring >

- Wiring of different thicknesses cannot be connected to the power supply wiring terminal block. (Slack in the power supply wiring may cause abnormal heat.)
- Use sleeve-insulated round crimp-style terminals for connections to the power supply wiring terminal block. When none are available, connect wires of the same diameter to both sides, as shown in the figure.

Follow the instructions are below if the wiring may get very hot due to slack in the power supply wiring.

- For wiring, use the designated power supply wiring and connect firmly, then secure to prevent outside pressure being exerted on the terminal board.
- Use the correct screwdriver for tightening the terminal screws. If the blade of screwdriver is too small, the head of the screw might be damaged, and the screw will not be properly tightened.
- If the terminal screws are tightened too hard, screws might be damaged.
- Refer to the table below for the tightening torque of the terminal screws.

Terminal block	Tightening torque (N·m)
Remote controller / transmission wiring terminal block (6P)	0.79 – 0.97
Power supply wiring terminal block (3P)	1.18 – 1.44

[WIRING EXAMPLE]

No. 1 system When using 1 remote controller for 1 indoor unit

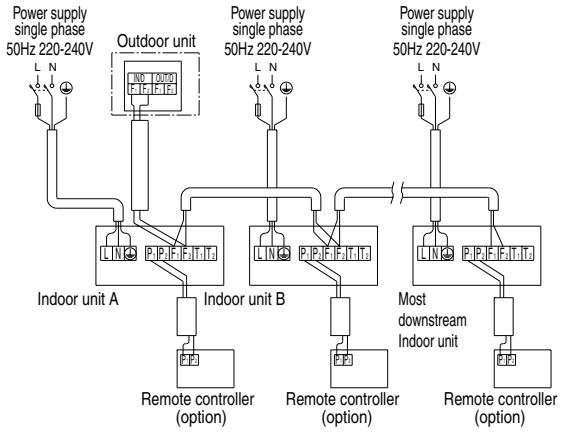

Fig. 19

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

No. 2 system For group control or use with 2 remote controllers

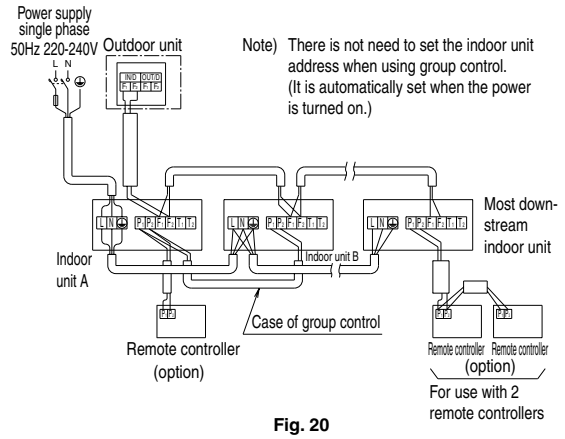

Fig. 20

No. 3 system When including BS unit

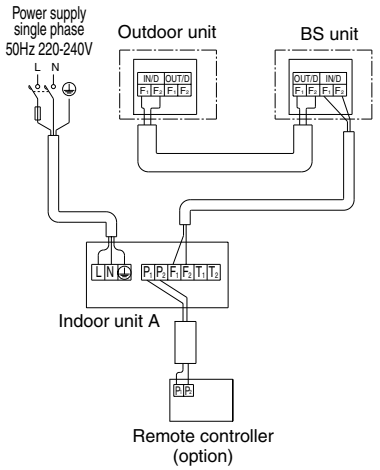

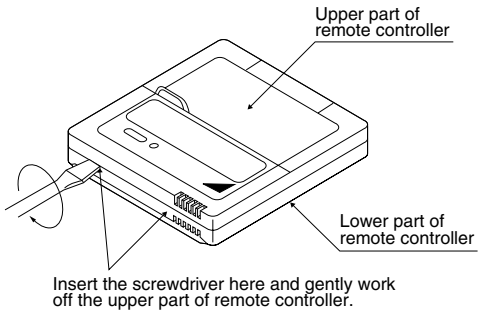

Fig. 21

10-2 CONTROL BY 2 REMOTE CONTROLLERS (Controlling 1 indoor unit by 2 remote controllers)

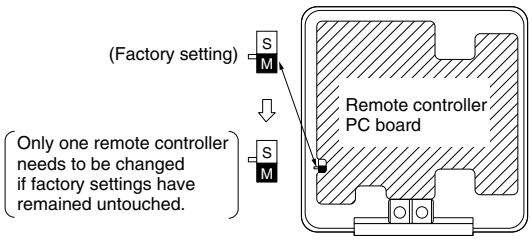

- When using 2 remote controllers, one must be set to "MAIN" and the other to "SUB".

MAIN/SUB CHANGEOVER

(1) Insert a ⊖ screwdriver into the recess between the upper and lower part of remote controller and, working from the 2 positions, pry off the upper part (2 locations).
The remote controller PC board is attached to the upper part of remote controller.

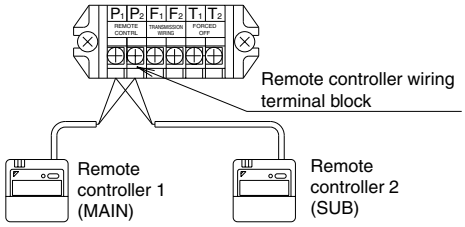

(2) Turn the MAIN/SUB changeover switch on one of the two remote controller PC boards to "S".
(Leave the switch of the other remote controller set to "M".)

Wiring Method (See "9. ELECTRIC WIRING WORK")

(3) Remove the control box lid.

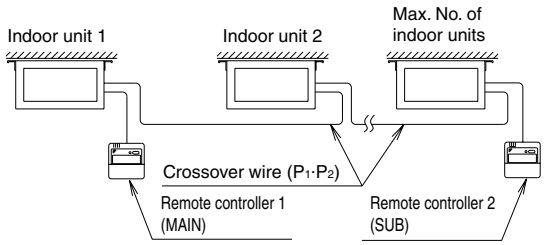

(4) Add remote controller 2 (SUB) to the terminal block for remote controller (P_1, P_2) in the control box. (There is no polarity.)

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

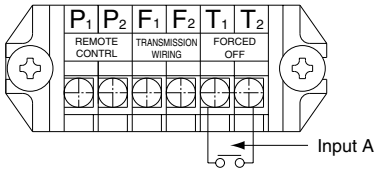

[PRECAUTIONS]

- Crossover wiring is needed when using group control and 2 remote controllers at the same time.
- Connect the indoor unit at the end of the crossover wire (P_1, P_2) to remote controller 2 (SUB).

10-3 REMOTE CONTROL (FORCED OFF AND ON/OFF OPERATION)

- Connect input lines from the outside to the terminals T_1 and T_2 on the terminal block (6P) for remote controller to achieve remote control.
- See the "**11. FIELD SETTING AND TEST RUN**" for details on operation.

Wire specification	Sheathed vinyl cord or cable (2 wires)
Gauge	0.75 - 1.25 mm^2
Length	Max. 100 m
External terminal	Contact that can ensure the minimum applicable load of 15 V DC, 1 mA.

10-4 CENTRALIZED CONTROL

- For centralized control, it is necessary to designate the group No. For details, refer to the manual of each optional controllers for centralized control.

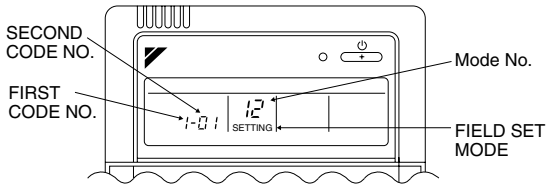

11. FIELD SETTING AND TEST RUN

〈Field settings may have to be performed using the remote controller, depending on the type of installation.〉

(1) Make sure the control box lids are closed on the indoor and outdoor units.

(2) Depending on the type of installation, make the field settings from the remote controller after the power is turned on, following the "Field Settings" manual which came with the remote controller.

- The settings can select "Mode No.", "FIRST CODE NO." and "SECOND CODE NO.".
- The "Field Settings" included with the remote controller lists the order of the settings and method of operation.

- Lastly, make sure the customer keeps the "Field Settings" manual, along with the operating manual, in a safe place.

11-1 SETTING THE STATIC PRESSURE SELECTION

- Select the SECOND CODE NO. for the resistance of the connected duct.
  (The SECOND CODE NO. is set to "01" when shipped.)
- See the technical documentation for details.

External static pressure	Mode No.	FIRST CODE NO.	SECOND CODE NO.
Standard (10Pa)	13(23)	5	01
High static pressure setting (30Pa)			02

11-2 REMOTE CONTROL SETTING

- Forced off and ON/OFF operation should be selected by selecting the SECOND CODE NO. as shown in the table below.
  (The SECOND CODE NO. is set to "01" when shipped.)

External ON/OFF input	Mode No.	FIRST CODE NO.	SECOND CODE NO.
Forced off	12(22)	1	01
ON/OFF operation			02

- Input A of forced off and ON/OFF operation work as shown in the table below.

Forced off	ON/OFF operation
Input A "on" to force a stop (remote controller reception prohibited)	Unit operated by changing input A from "off" to "on"
Input A "off" to allow remote controller	Unit stopped by changing input A from "on" to "off"

11-3 SETTING THE FILTER SIGN DISPLAY INTERVAL

- Explain the following to the customer if the filter dirt settings have been changed.
- The filter sign display time is set to 2500 hours (equivalent to 1 year's use) when shipped.
- The settings can be changed to not display.
- When installing the unit in a place with much dusts, set the filter sign display time to shorter intervals (1,250 hours).
- Explain it to the customer that the filter needs to be cleaned regularly to prevent clogging and also the time that is set.

Mode No.	FIRST CODE NO.		SECOND CODE NO.	
			01	02
10 (20)	0	Filter dirt	low	high
	1 (low/high)	Displayed time (units: hours)	2500/1250	10000/5000
	3	Filter sign display	ON	OFF

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

11-4 SETTINGS FOR SEPARATELY SOLD ACCESSORIES

- See the instruction manuals included with separately sold accessories for the necessary settings.

〈 **When using a wireless remote controller** 〉

- A wireless remote controller address needs to be set when using a wireless remote controller. See the installation manual included with the wireless remote controller for details on how to make the settings.

(3) Perform a test run according to the outdoor unit's installation manual.

- The operation lamp of the remote controller will flash when a malfunction occurs. Check the malfunction code on the liquid crystal display to identify the point of trouble. An explanation of malfunction codes and the corresponding trouble is provided in "CAUTION FOR SERVICING" of the outdoor unit.
  If the display shows any of the following, there is a possibility that the wiring was done incorrectly or that the power is not on, so check again.

Remote control display	Content
"⚠" display	• There is a short circuit at the FORCED OFF terminals (T_1, T_2).
"U3" display	• The test-run has not been performed.
"U4" display "UA" display	• The power on the outdoor unit is off. • The outdoor unit has not been wired for power supply. • Wiring is incorrect for the transmission wiring and / or FORCED OFF wiring. • The transmission wiring is cut.
"UC" display	• Reversed transmission wiring
No display	• The power on the indoor unit is off. • The indoor unit has not been wired for power supply. • Wiring is incorrect for the remote controller wiring, the transmission wiring and / or the FORCED OFF wiring. • The remote controller wiring is cut.

⚠ CAUTION

- Always stop the test run using the remote controller to stop operation.

(4) After finishing the test run, make sure to check drainage in the drain pump according to "7. DRAIN PIPING WORK".

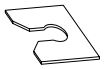

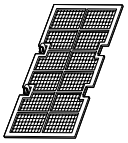

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

12. Accessories

12.1 FXDQ-PB, FXDQ-NB

Standard Accessories

1. Features

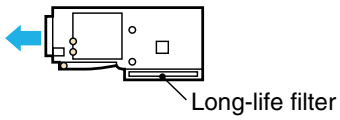

A highly flexible air-conditioning system that is adaptable to a wide range of needs, and is designed to facilitate maintenance while providing a high-quality environment.

- Offers freedom of development for the body, outlets and inlets, and wide variety of optional functions, and gives you the freedom to choose the best set-up according to conditions and needs such as interior and layout design, maintenance, etc.

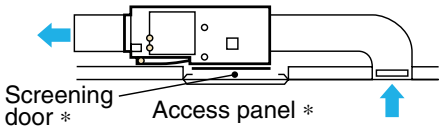

Installation Examples (∗Optional Parts)

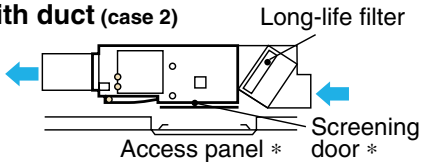

●Standard

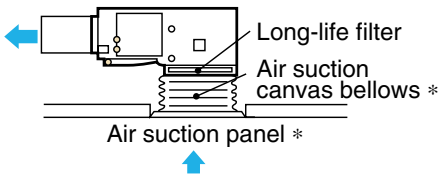

●With duct (case 1)

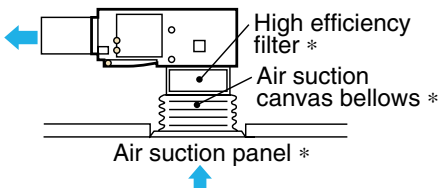

●With duct (case 2)

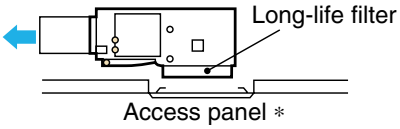

●Cassette style (standard filter)

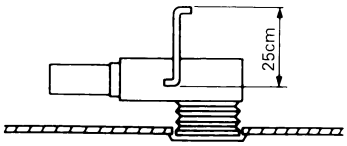

●Cassette style (high efficiency filter)

●Ceiling return

- In addition to regular ducts, layout is unrestricted and design is easy. You can also use flexible ducts that do not require the duct work of regular ducts.
- Offers a selection of nine models ranging from 20 class (equivalent to 0.8 HP) to Maximum 125 class (equivalent to 5 HP).
- All models feature thin design (350 mm height) making them applicable to ceiling pockets that tend to be shallow.
- Lets you set external static pressure in three stages ranging from max. 10 to min. 2 mm H_2O (2 stages, min. 4 mm H_2O for 80 class) according to conditions such as duct height or whether a high-efficiency filter is used, etc.
- Equipped with a programmed drying mechanism that dehumidifies while inhibiting changes in room temperature
- Includes as standard equipment a long-life filter that is maintenance-free for approximately one year. (Treated to mold resistant.)
- Includes as standard equipment drain pump kit that makes possible draining in the upward direction up to 250 mm from the drain pipe opening.

- Quiet-type air-conditioner doesn't destroy the quiet mood of your office.

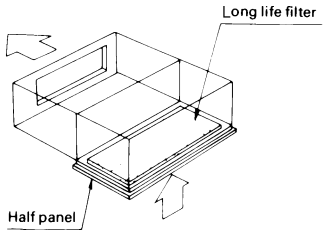

Capacity	20 type	25 type	32 type	40 type	50 type	63 type	80 type	100 type	125 type
Operating sound (dBA)	37/32	37/32	38/32	38/32	41/36	42/35	43/37	43/37	46/41

- Two types of high-efficiency filters, 65% and 90% (colorimetric method) are available. (Cannot be used if using rear suction type.)
- Suction half panel is thin and unimposing. Ceiling materials adhere to its surface and it provides an excellent finishing touch for the ceiling.
- A wide variety of optional accessories are available such as an auxiliary electric heater (except cooling only).
- If using duct air mounting, please consult with the local fire department for auxiliary heater installation.

3D039434

Notes;
1. Location of unit's Name Plate: Fan housing surface inside of filter.
2. When installing an optional accessory, refer to the installation drawings.
3. Refer to the separate drawing when installing the duct.
4. "Decoration panel" and "Air suction canvas" are optional accessories.

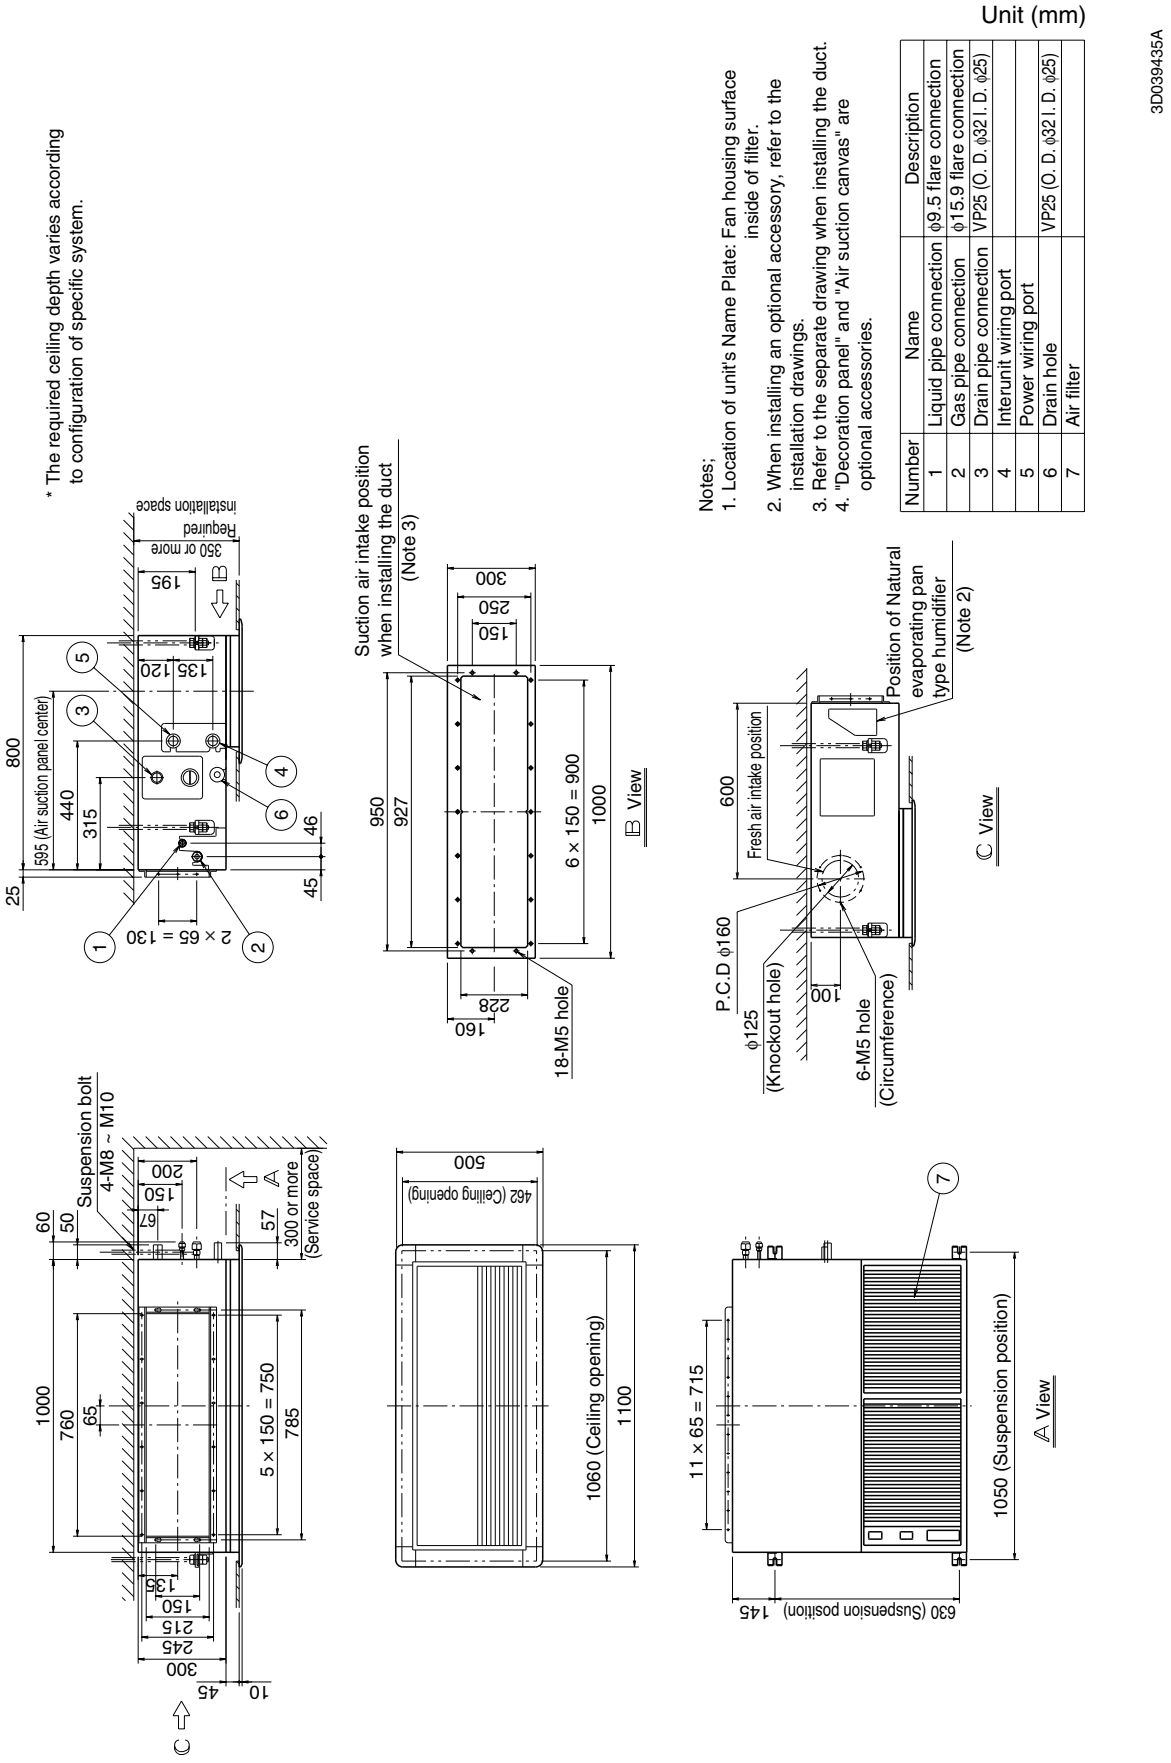

Number	Name	Description
1	Liquid pipe connection	ϕ5.4 flare connection
2	Gas pipe connection	ϕ12.7 flare connection
3	Drain pipe connection	VP25 (O. D. ϕ32 I. D. ϕ25)
4	Interunit wiring port	
5	Power wiring port	
6	Drain hole	VP25 (O. D. ϕ32 I. D. ϕ25)
7	Air filter

NOTES)
1. □□□ : TERMINAL BLOCK, ⊙⊙ , ⊃– : CONNECTOR, –○– : TERMINAL
2. ⫣⫣ : FIELD WIRING
3. IN CASE USING CENTRAL REMOTE CONTROLLER, CONNECT IT TO THE UNIT IN ACCORDANCE WITH THE ATTACHED INSTRUCTION MANUAL.
4. WHEN CONNECTING THE INPUT WIRES FROM OUTSIDE. FDRCED OFF OR ON/OFF CONTROL OPERATION CAN BE SELECTED BY REMOTE CONTROLLER. IN DETAILS, REFER TO THE INSTALLATION MANUAL ATTACHED THE UNIT.
5. IN CASE INSTALLING THE ELECTRIC HEATER, EXECUTE THE ADDITIONAL WIRING FOR HEATER CIRCUIT (K1M, E1H). IN THIS CASE, THE MAIN POWER SUPPLY HAS TO BE SUPPLIED INDEPENDENTLY.
6. IN CASE HIGH OR LOW E.S.P. OPERATION, CHANGE OVER THE WIRING CONNECTION FROM X4A (OF A2P) TO X3A OR X5A.
7. SYMBOLS SHOW AS FOLLOWS. (PNK : PINK WHT : WHITE YLW : YELLOW GRY : GRAY ORG : ORANGE BLU : BLUE BLK : BLACK RED : RED BRN : BROWN GRN : GREEN)
8. USE COPPER CONDUCTORS ONLY.
9. ONLY 80. 100. 125 TYPE.

FXSQ100M					1.5	15	0.225	1.2	242	222
FXSQ125M					2.0	15	0.225	1.6	321	301

Symbols:

MCA : Min. Circuit Amps (A)
MFA : Max. Fuse Amps (See note 5)
KW : Fan Motor Rated Output(KW)
FLA : Full Load Amps(A)
IFM : Indoor Fan Motor

Note:

1. Voltage range

   Units are suitable for use on electrical systems where voltage supplied to unit terminals is not below or above listed range limits.

2. Maximum allowable voltage unbalance between phases is 2%.

3. MCA/MFA

   MCA = 1.25 X FLA

   MFA ≦ 4 X FLA

   (Next lower standard fuse rating. Min.15A)

4. Select wire size based on the MCA.

5. Instead of fuse, use Circuit Breaker.

Note:

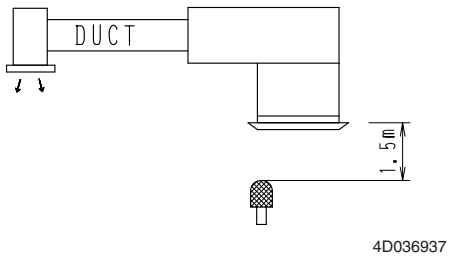

1. The remote controller can be used to switch between “high” and “low”.
2. The air flow is set to “standard” before leaving the factory. It is possible to switch between “standard ESP” and “high ESP” by changing the terminals in the indoor unit electrical box.
3. The external static pressure indicates the characteristics of the fan when a suction panel (optional accessory) and a canvas for the suction panel (optional accessory) are incorporated into the main unit (with a long-life filter).

・ For standard installation (air inlet on the bottom side), choose one of the below two means of installation.

Note: For other than standard installation, contact your Daikin dealer for details.

Drain Pump Kit

Indoor unit	Drain pump kit
FXSQ-M	Standard (Equipped with indoor unit)

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Drain Piping Work

<<Rig the drain pipe as shown below and take measures against condensation. Improperly rigged piping could lead to leaks and eventually wet furniture and belongings.>>

(1) Carry out the drain piping

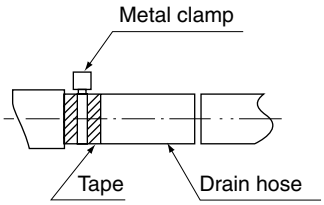

- The diameter of the drain pipe should be greater than or equal to the diameter of the connecting pipe (vinyl tube ; pipe size : 25 mm ; outer dimension : 32 mm).
- Keep the drain pipe short and sloping downwards at a gradient of at least 1 / 100 to prevent air pockets from forming.
- If the drain hose cannot be sufficiently set on a slope, execute the drain raising piping.
- To keep the drain hose from sagging, space hanging wires every 1 to 1.5 m.

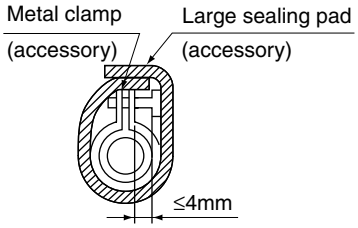

⚠ CAUTION

Setting the unit at an angle opposite to the drain piping might cause leaks.

- Use the drain hose and the metal clamp. Tighten the clamp firmly. Insert the drain hose into the drain socket, up to the tape. Tighten the clamp until the screw head is less than 4 mm from the hose.
- Wrap the sealing pad over the metal clamp and drain hose to insulate.
- Insulate the drain hose inside the building.

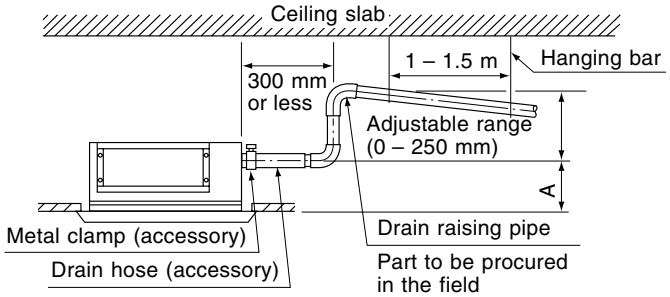

〈 PRECAUTIONS FOR DRAIN RAISING PIPING 〉

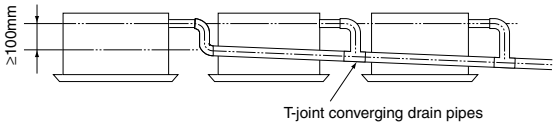

〈HOW TO INSTALL PIPING〉

(1) Connect the drain hose to the drain raising pipes, and insulate them.
(2) Connect the drain hose to the drain outlet on the indoor unit, and tighten it with the metal clamp.
(3) Insulate both metal clamp and drain hose with the sealing pad.

	A (mm)
When canvas duct is installed	350 – 530
When air inlet panel is directly installed	275

- If converging multiple drain pipes, install according to the procedure shown below.

Select converging drain pipes whose gauge is suitable for the operating capacity of the unit.

⚠ CAUTION

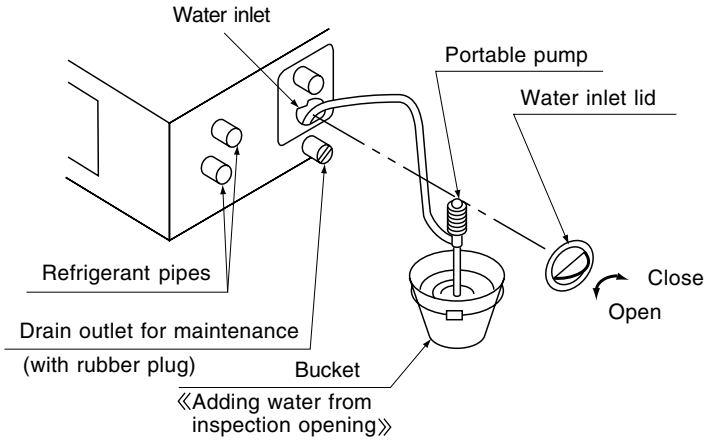

- Drain piping connections
  Do not connect the drain piping directly to sewage pipes that smell of ammonia. The ammonia in the sewage might enter the indoor unit through the drain pipes and corrode the heat exchanger.
- Keep in mind that it will become the cause of getting drain pipe blocked if water collects on drain pipe.

3P086156-7D

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

(2) After piping work is finished, check drainage flows smoothly.

- Open the water inlet lid, add approximately 1 liter of water gradually and check drainage flow.

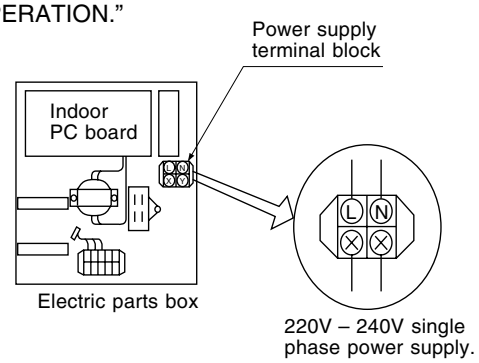

Note: Use this outlet to drain water from the drain pan.

[WHEN ELECTRIC WIRING WORK IS FINISHED]

- Check drainage flow during COOL running, explained under “TEST OPERATION.”

[WHEN ELECTRIC WIRING WORK IS NOT FINISHED]

- Remove the electric parts box lid, connect a power supply and remote controller to the terminals.
  (Refer to the “HOW TO CONNECT WIRINGS”)
  Be sure attach the electric parts box lid before turning on the power.
  Next, press the inspection / test operation button “ TEST ” on the remote controller. The unit will engage the test operation mode.
  Press the operation mode selector button “ ” until selecting FAN OPERATION “ ”. Then, press the ON/OFF button “ ”. The indoor unit fan and drain pump will start up. Check that the water has drained from the unit. Press “ TEST ” to go back to the first mode.

- You can check whether drainage is satisfactory or not by removing the access opening lid and checking the water level of the drain pan through the access opening.
- **Be careful when doing so because the fan is turning at the same time.**

Installation

Characteristics of filter

Wiring

Precaution at use

1. When the aux. electric heater will be installed, “Wiring adaptor (KRP1B61)” is separately needed for one indoor unit by one piece of the adaptor.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Natural Evaporating Pan Type Humidifier (Wiring adaptor is required.)

Specifications

Item \ Model	KNM25K32V1	KNM25K50V1	KNM25K63V1	KNM25K125V1
Humidifying Capacity (L/h)	0.4	0.6	1.0	1.8
Power Supply (W)	Single Phase, 220-240V 50Hz			
Power Consumption	12/9.6			
Water Inlet Port	1/2B			
Water Outlet Port	VP25 (External dia. ϕ32) (drain pipe at indoor unit)			
Applicable Models	20 · 25 · 32 Class	40 · 50 Class	63 Class	80 · 100 · 125 Class

Precaution at use

1. "Wiring adaptor (KRP1B61)" is separately needed for one indoor unit by one piece of the adaptor.
2. This humidifier will be built in a indoor unit, while the solenoid valve box will be mounted out of the unit's body (refer to the dimensions of optional accessories).
3. The field setting should be changed by a remote controller.

Note:

The value in JIS heating condition's standard.

Feed water piping

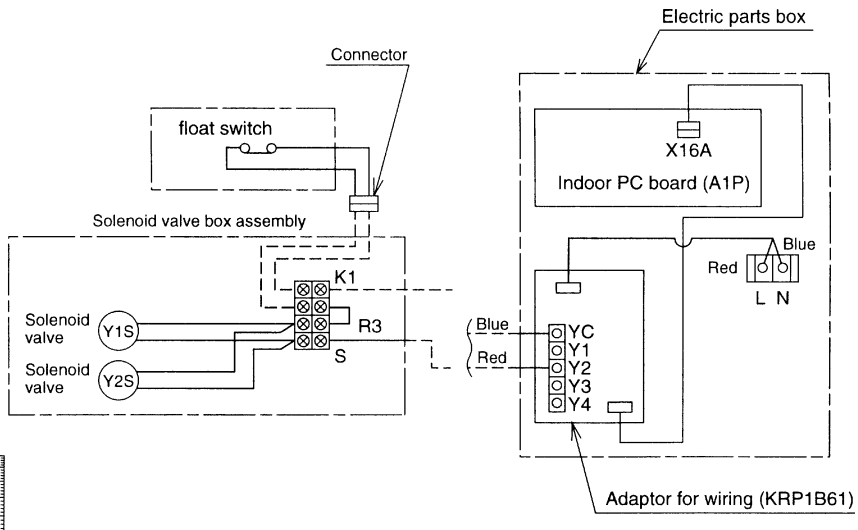

1. Provide a stop valve of feed water for the feed water circuit.
2. Supply clean water for the feed water. Contaminated water clogs a valve and the contaminants accumulate in a water tank, disturbing a normal operation of the humidifier. (Never use cooling water for a cooling tower or hot water for heating purpose). Moreover, since white powder will appear if the feed water contains much silica, it is recommended to install a water purifier or a water softener if these phenomena are found.
3. Use water in the range of water temperature 5 ~ 50°C and water pressure 0.049 ~ 0.294 MPa[0.5 ~3kg/cm²]. Provide a reducing valve between a strainer and this kit, in case of 0.294MPa or more for feed water pressure.
4. The feed water pipe can not be connected to a public water route. Accordingly, if water must be supplied through a public water by all means, provide a cistern tank (approved model only).

Wiring diagram

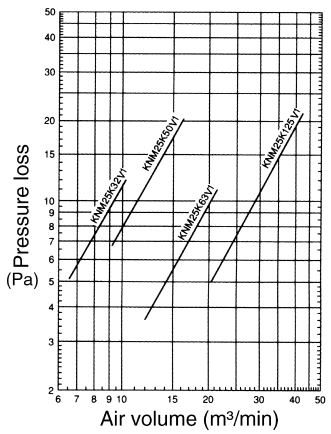

---------- Field wiring

Make wiring as shown on the right, if a humidity controller will be mounted.

Arrange the wiring shown right locally for that case. Set the turn-over switch to OFF for the choice of ON/OFF of group humidity controlling input on the "Wiring adaptor PC board" .

Characteristics of Filter

Filter Chamber (for Rear-suction Type)

This kit will be used for the rear-suction type when the high efficiency filter or the long life filter will be built in.

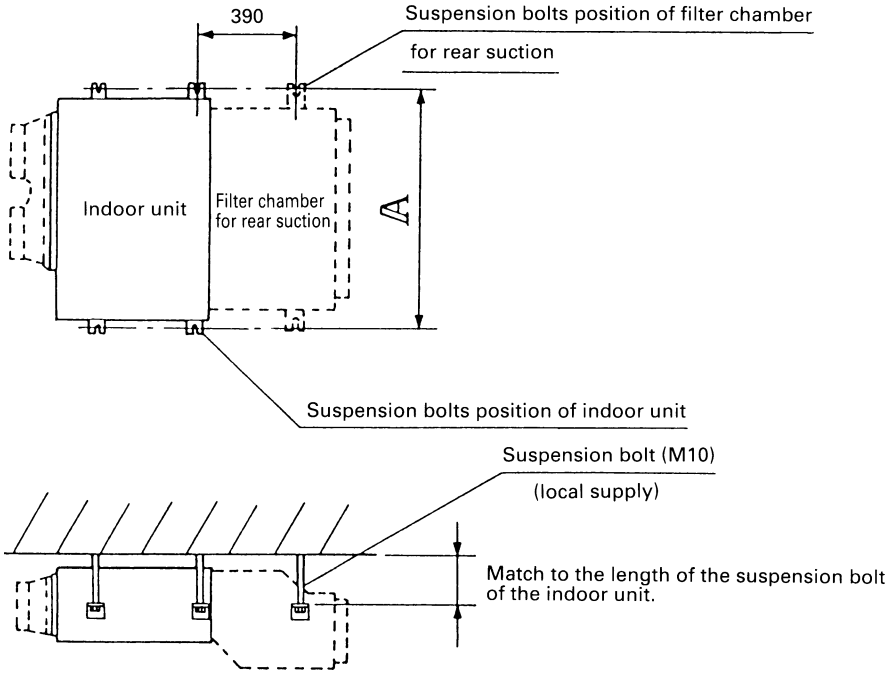

Applicable Model

Model	Applicable Model
KAJ25L36B	20 · 25 · 32 Class
KAJ25L56B	40 · 50 Class
KAJ25L80B	63 Class
KAJ25L160B	80 · 100 · 125 Class

Installation

Be sure to remove the long life filter and attach the rear-suction type's sealing plate there when the filter chamber (for the rear-suction type) must be installed.

Model	A
KAJ25L36B	600
KAJ25L56B	750
KAJ25L80B	1050
KAJ25L160B	1450

Note:

Refer to the appearance figure of optional accessory describing later for further details.

1. Features

Ceiling Mounted Duct Type

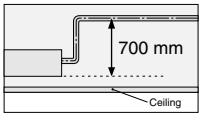

New

FXMQ20P/FXMQ25P
FXMQ32P/FXMQ40P
FXMQ50P/FXMQ63P
FXMQ80P/FXMQ100P
FXMQ125P

Middle and high static pressure allows for flexible duct design

- A DC fan motor increases the external static pressure capacity range to include middle to high static pressures, increasing design flexibility.
  30 Pa–100 Pa for FXMQ20P-32P
  30 Pa–160 Pa for FXMQ40P
  50 Pa–200 Pa for FXMQ50P-125P
- All models are only 300 mm in height, an improvement over the 390 mm height of conventional models. The weight of the FXMQ40P has been reduced from 44 kg to 28 kg.
- Drain pump is equipped as standard accessory with 700 mm lift.

- Control of the airflow rate has been improved from 2-step to 3-step control.
- Low operation sound level (dB(A))

FXMQ-P	20	30	32	40	50	63	80	100	125
Sound level (HH/H/L)	33/31/29		34/32/30	39/37/35	41/39/37	42/40/38	43/41/39		44/42/40

- Energy-efficient
  - The adopted DC fan motor is much more efficient than the conventional AC motor, yielding an approximate 20% decrease in energy consumption. (FXMQ125P)

- Improved ease of installation
  - Airflow can be controlled using a remote controller. With the conventional model, the airflow rate was controlled from the PC board. It is automatically adjusted to the range between approximately ±10% of the rated HH tap airflow.
- Improved ease of maintenance
  - The drain pan can be detached for easy cleaning. A new antibacterial treatment that uses silver ions has been applied to the drain pan, preventing the growth of slime, mould and bacteria that cause blockages and odours.

∗4 Air filter is not standard accessory, but please mount it in the duct system of the suction side. Select its colorimetric method (gravity method) 50% or more.
5 Capacities are net, including a deduction for cooling (an addition for heating) for indoor fan motor heat.
∗6 Anechoic chamber conversion value, measured at a point 1.5 m downward from the unit centre. During actual operation, these values are normally somewhat higher as a result of ambient conditions.
7 Refer to page 255 for Fan Motor Input.

Conversion Formulae
kcal/h=kW×860 Btu/h=kW×3412 cfm=m³/min×35.3

FXMQ100PVE				2.9	16	0.350	2.3	376	364
FXMQ125PVE				3.4	16	0.350	2.7	461	449

Symbols:
MCA : Min. Circuit Amps (A)
MFA : Max. Fuse Amps (See note 5)
KW : Fan Motor Rated Output(kW)
FLA : Full Load Amps(A)
IFM : Indoor Fan Motor

Note:
1. Voltage range
   Units are suitable for use on electrical systems where voltage supplied to unit terminals is not below or above listed range limits.
2. Maximum allowable voltage unbalance between phases is 2%.
3. MCA/MFA
   MCA = 1.25 X FLA
   MFA ≦ 4 X FLA
   (Next lower standard fuse rating. Min. 16A)
4. Select wire size based on the MCA.
5. Instead of fuse, use circuit breaker.

8. Fan Performances

8.1 Fan Performance

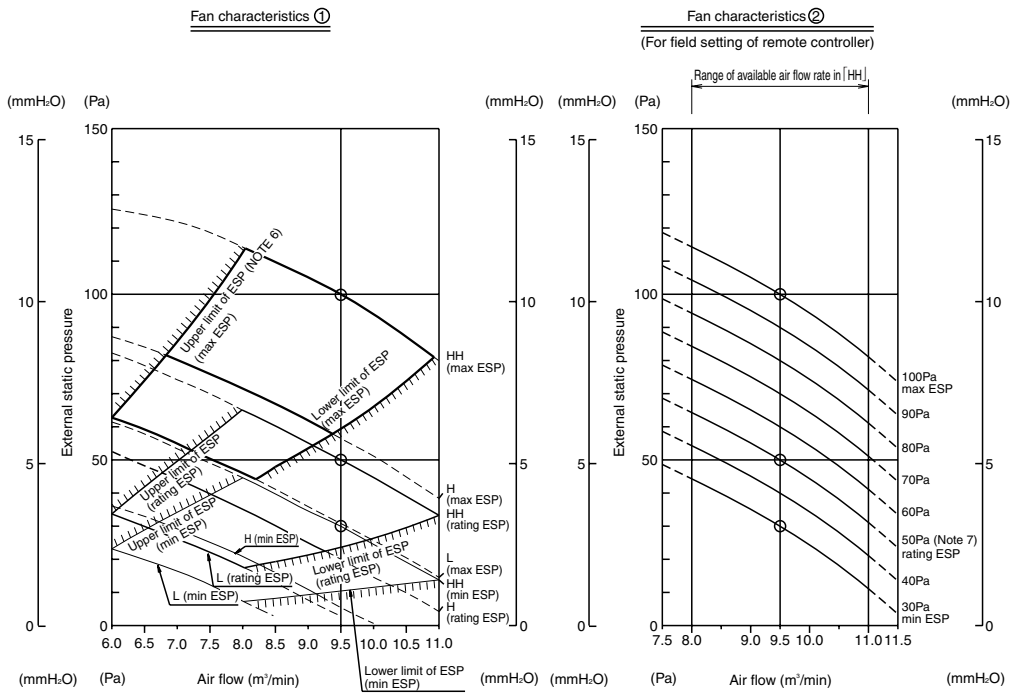

FXMQ20P / 25PVE

Notes:
1. As for this machine, setting is possible by 8 position of ESP.
2. Fan characteristics ① shows a fan characteristic at the time of the "maximum ESP" "rating ESP" "minimum ESP" as a representative.
3. Fan characteristics ② (for field setting of remote controller) shows a fan characteristic of each ESP of field setting possible air flow "HH".
4. Please choose ESP setting by using Fan characteristics ① and Fan characteristics ② by the resistance of a connected duct.
5. The remote controller can be used to change "HH" "H" and "L".
6. ESP : external static pressure
7. The value in this figure shows ESP in rating air flow.

3D062537

FXMQ32PVE

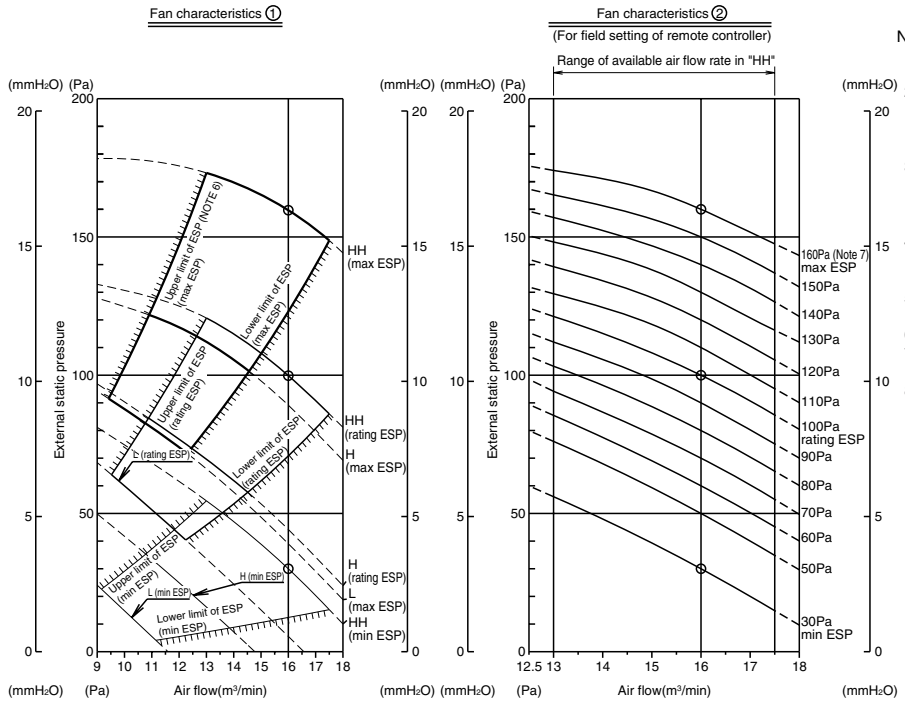

Notes:
1. As for this machine, setting is possible by 8 position of ESP.
2. Fan characteristics ① shows a fan characteristic at the time of the "maximum ESP" "rating ESP" "minimum ESP" as a representative.
3. Fan characteristics ② (for field setting of remote controller) shows a fan characteristic of each ESP of field setting possible air flow "HH".
4. Please choose ESP setting by using Fan characteristics ① and Fan characteristics ② by the resistance of a connected duct.
5. The remote controller can be used to change "HH" "H" and "L".
6. ESP : external static pressure
7. The value in this figure shows ESP in rating air flow.

8.2 “Air Flow Auto Adjustment” Characteristics

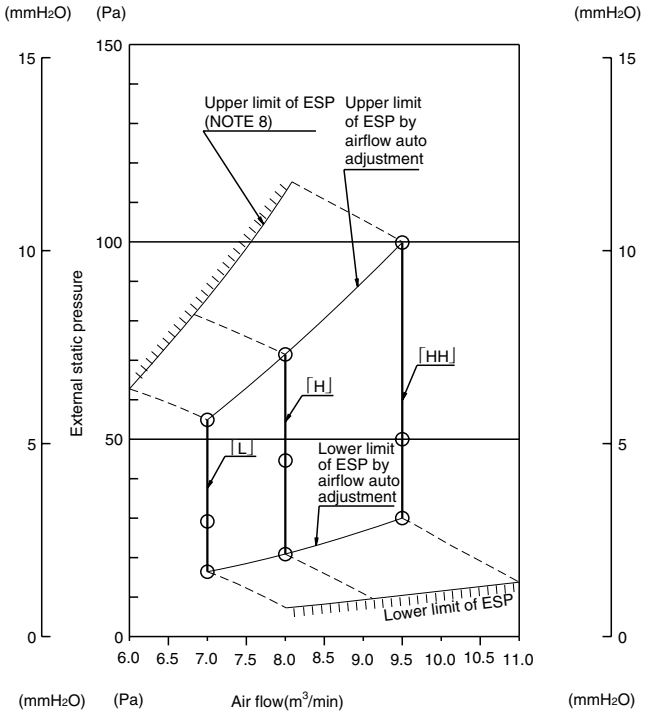

FXMQ20P / 25PVE

Notes:
1. As for this machine, less than 10% of the volume of blow-off air is automatically adjusted to the rated quantity by airflow auto adjustment at the time of installation.
2. After duct construction completion, please perform local setting "airflow auto adjustment" by remote controller.
3. About the local setting method of the "airflow auto adjustment", look at the installation manual which is attached to an indoor unit.
4. External static pressure that can adjust by "airflow auto adjustment" function is 30Pa-100Pa (When air flow is HH).
5. It is not operated auto adjustment, operated in air flow that is different from rated quantity in the case of use out of external static pressure range mentioned above.
6. This figure shows a fan characteristics at the time of "HH" "H" and "L".
7. The remote controller can be used to change "HH" "H" and "L".
8. ESP : external static pressure.

3D062539

FXMQ32PVE

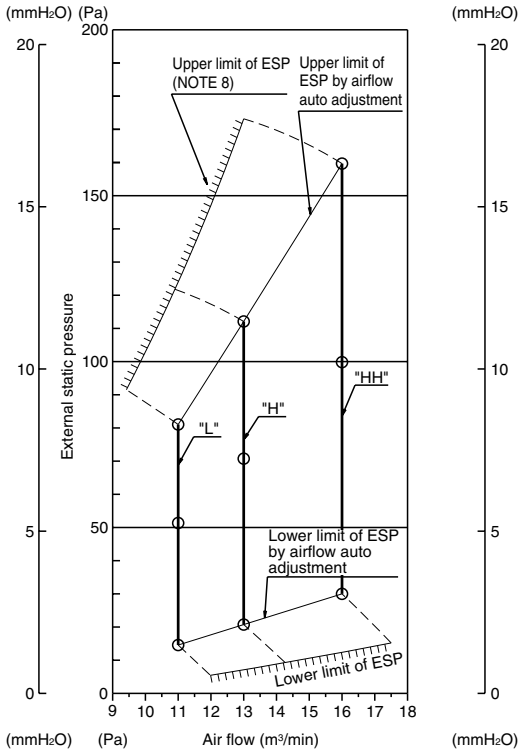

Notes:
1. As for this machine, less than 10% of the volume of blow-off air is automatically adjusted to the rated quantity by airflow auto adjustment at the time of installation.
2. After duct construction completion, please perform local setting "airflow auto adjustment" by remote controller.
3. About the local setting method of the "airflow auto adjustment", look at the installation manual which is attached to an indoor unit.
4. External static pressure that can adjust by "airflow auto adjustment" function is 30Pa-100Pa (When air flow is HH).
5. It is not operated auto adjustment, operated in air flow that is different from rated quantity in the case of use out of external static pressure range mentioned above.
6. This figure shows a fan characteristics at the time of "HH" "H" and "L".
7. The remote controller can be used to change "HH" "H" and "L".
8. ESP : external static pressure.

FXMQ63PVE

Notes:
1. As for this machine, less than 10% of the volume of blow-off air is automatically adjusted to the rated quantity by airflow auto adjustment at the time of installation.
2. After duct construction completion, please perform local setting "airflow auto adjustment" by remote controller.
3. About the local setting method of the "airflow auto adjustment", look at the installation manual which is attached to an indoor unit.
4. External static pressure that can adjust by "airflow auto adjustment" function is 50Pa - 200Pa (When air flow is HH).
5. It is not operated auto adjustment, operated in air flow that is different from rated quantity in the case of use out of external static pressure range mentioned above.
6. This figure shows a fan characteristics at the time of "HH" "H" and "L".
7. The remote controller can be used to change "HH" "H" and "L".
8. ESP : external static pressure.
9. Please set the external static pressure of the suction duct at 150Pa or less.

3D060579A

FXMQ80PVE

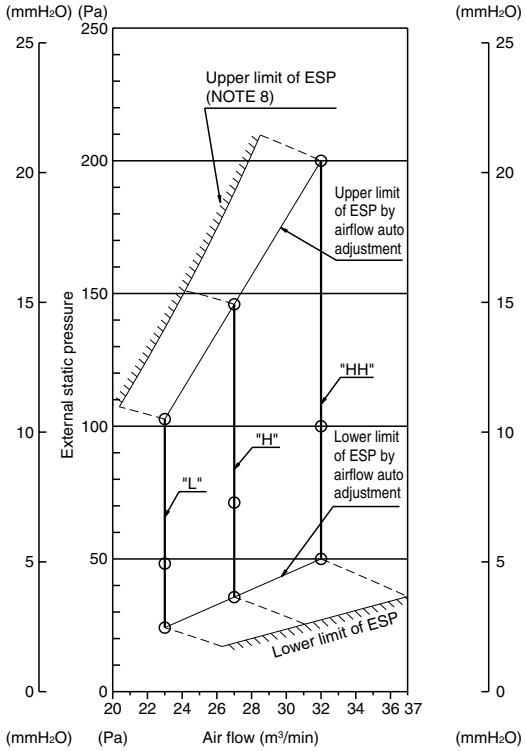

Notes:
1. As for this machine, less than 10% of the volume of blow-off air is automatically adjusted to the rated quantity by airflow auto adjustment at the time of installation.
2. After duct construction completion, please perform local setting "airflow auto adjustment" by remote controller.
3. About the local setting method of the "airflow auto adjustment", look at the installation manual which is attached to an indoor unit.
4. External static pressure that can adjust by "airflow auto adjustment" function is 50Pa - 200Pa (When air flow is HH).
5. It is not operated auto adjustment, operated in air flow that is different from rated quantity in the case of use out of external static pressure range mentioned above.
6. This figure shows a fan characteristics at the time of "HH" "H" and "L".
7. The remote controller can be used to change "HH" "H" and "L".
8. ESP : external static pressure.
9. Please set the external static pressure of the suction duct at 150Pa or less.

9. Sound Levels

Overall

■ **Ceiling Mounted Duct Type**

4D060446

Note:

1. The operating conditions are assumed to be standard (JIS conditions).
2. These operating values were obtained in a dead room (conversion values).
   Sound level will vary depending on a range of factors such as the construction (acoustic absorption coefficient) of the particular room in which the equipments installed.

11. Installation Manual

DAIKIN

VRV SYSTEM Inverter Air Conditioners Installation manual

CONTENTS

1. SAFETY PRECAUTIONS 1
2. BEFORE INSTALLATION 2
3. SELECTING INSTALLATION SITE 3
4. PREPARATIONS BEFORE INSTALLATION 4
5. INDOOR UNIT INSTALLATION 5
6. REFRIGERANT PIPING WORK 5
7. DRAIN PIPING WORK 7
8. DUCT WORK 8
9. ELECTRIC WIRING WORK 9
10. WIRING EXAMPLE AND HOW TO SET THE REMOTE CONTROLLER 10
11. FIELD SETTING 12
12. TEST OPERATION 14

1. SAFETY PRECAUTIONS

Please read these “SAFETY PRECAUTIONS” carefully before installing air conditioning unit and be sure to install it correctly. After completing installation, conduct a trial operation to check for faults and explain to the customer how to operate the air conditioner and take care of it with the aid of the operation manual. Ask the customer to store the installation manual along with the operation manual for future reference.

This air conditioner comes under the term “appliances not accessible to the general public”.

Safety Precaution
This unit is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

Meaning of WARNING and CAUTION notices

⚠ **WARNING** ..... Failure to follow these instructions properly may result in personal injury or loss of life.

⚠ **CAUTION** ..... Failure to observe these instructions properly may result in property damage or personal injury, which may be serious depending on the circumstances.

⚠ WARNING

- Ask your dealer or qualified personnel to carry out installation work.
  Do not attempt to install the air conditioner yourself. Improper installation may result in water leakage, electric shocks or fire.
- Install the air conditioner in accordance with the instructions in this installation manual.
  Improper installation may result in water leakage, electric shocks or fire.
- Consult your local dealer regarding what to do in case of refrigerant leakage. When the air conditioner is to be installed in a small room, it is necessary to take proper measures so that the amount of any leaked refrigerant does not exceed the concentration limit in the event of a leakage.
  Otherwise, this may lead to an accident due to oxygen depletion.
- Be sure to use only the specified accessories and parts for installation work.
  Failure to use the specified parts may result in the unit falling, water leakage, electric shocks or fire.
- Install the air conditioner on a foundation strong enough to withstand the weight of the unit.
  A foundation of insufficient strength may result in the equipment falling and causing injury.
- Carry out the specified installation work after taking into account strong winds, typhoons or earthquakes.
  Failure to do so during installation work may result in the unit falling and causing accidents.
- Make sure that a separate power supply circuit is provided for this unit and that all electrical work is carried out by qualified personnel according to local laws and regulations and this installation manual.
  An insufficient power supply capacity or improper electrical construction may lead to electric shocks or fire.
- Make sure that all wiring is secured, the specified wires are used, and that there is no strain on the terminal connections or wires.
  Improper connections or securing of wires may result in abnormal heat build-up or fire.
- When wiring the power supply and connecting the remote controller wiring and transmission wiring, position the wires so that the control box lid can be securely fastened.
  Improper positioning of the control box lid may result in electric shocks, fire or the terminals overheating.
- If refrigerant gas leaks during installation, ventilate the area immediately.
  Toxic gas may be produced if the refrigerant comes into contact with fire.
- After completing installation, check for refrigerant gas leakage.
  Toxic gas may be produced if the refrigerant gas leaks into the room and comes into contact with a source of fire, such as a fan heater, stove or cooker.
- Be sure to switch off the unit before touching any electrical parts.
- Be sure to earth the air conditioner.
  Do not earth the unit to a utility pipe, lightning conductor or telephone earth lead. Imperfect earthing may result in electric shocks or fire.
  A high surge current from lightning or other sources may cause damage to the air conditioner.
- Be sure to install an earth leakage breaker.
  Failure to install an earth leakage breaker may result in electric shocks or fire.

⚠ CAUTION

- While following the instructions in this installation manual, install drain piping to ensure proper drainage and insulate piping to prevent condensation.
  Improper drain piping may result in indoor water leakage and property damage.
- Install the indoor and outdoor units, power cord and connecting wires at least 1 meter away from televisions or radios to prevent picture interference and noise.
  (Depending on the incoming signal strength, a distance of 1 meter may not be sufficient to eliminate noise.)
- Remote controller (wireless kit) transmitting distance can be shorter than expected in rooms with electronic fluorescent lamps (inverter or rapid start types).
  Install the indoor unit as far away from fluorescent lamps as possible.

3PN06583-7L

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

- Do not install the air conditioner in the following locations:
  1. Where there is a high concentration of mineral oil spray or vapour (e.g. a kitchen).
     Plastic parts will deteriorate, parts may fall off and water leakage could result.
  2. Where corrosive gas, such as sulphurous acid gas, is produced.
     Corroding of copper pipes or soldered parts may result in refrigerant leakage.
  3. Near machinery emitting electromagnetic radiation.
     Electromagnetic radiation may disturb the operation of the control system and result in a malfunction of the unit.
  4. Where flammable gas may leak, where there is carbon fibre or ignitable dust suspensions in the air, or where volatile flammables such as paint thinner or gasoline are handled.
     Operating the unit in such conditions may result in fire.

2. BEFORE INSTALLATION

- **When moving the unit while removing it from the carton box, be sure to lift it by holding on to the four lifting lugs without exerting any pressure on other parts, especially, the refrigerant piping, drain piping, flanges and other resin parts.**
- Be sure to check the type of R410A refrigerant to be used before installing the unit. (Using an incorrect refrigerant will prevent normal operation of the unit.)
- The accessories needed for installation must be retained in your custody until the installation work is completed. Do not discard them!
- Decide upon a line of transport.
- Leave the unit inside its packaging while moving, until reaching the installation site. Where unpacking is unavoidable, use a sling of soft material or protective plates together with a rope when lifting, to avoid damage or scratches to the unit.
- When moving the unit or affter opening, hold the unit by the hanger brackets (× 4). Do not apply force to the refrigerant piping, drain piping, flanges or plastic parts.
- For the installation of outdoor unit, refer to the installation manual attached to the outdoor unit.
- Do not install or operate the unit in rooms mentioned below.
  - **Laden with mineral oil, or filled with oil vapor or spray like in kitchens. (Plastic parts may deteriorate which could eventually cause the unit to fall out of place, or could lead to leaks.)**
  - **Where corrosive gas like sulfurous gas exists. (Copper tubing and brazed spots may corrode which could eventually lead to refrigerant leaks.)**
  - **Where exposed to combustible gases and where volatile flammable gas like thinner or gasoline is used. (Gas in the vicinity of the unit could ignite.)**
  - **Where machines can generate electromagnetic waves. (Control system may malfunction.)**
  - **Where the air contains high levels of salt such as that near the ocean and where voltage fluctuates greatly such as that in factories.**
    Also in vehicles or vessels.
- This unit, both indoor and outdoor, is suitable for installation in a commercial and light industrial environment.
  If installed as a household appliance it could cause electromagnetic interference.

2-1 PRECAUTIONS

- Be sure to read this manual before installing the indoor unit.
- Entrust installation to the place of purchase or a qualified serviceman. Improper installation could lead to leaks and, in worse cases, electric shock of fire.
- Use only parts provided with the unit or parts satisfying required specifications. Unspecified parts could cause the unit to fall out of place, or could lead to leaks and, in worse cases, electric shock or fire.
- Be sure to mount an air filter (part to be procured in the field) in the suction air passage in order to prevent water leaking, etc.

2-2 ACCESSORIES

Check that the following accessories are provided and that each accessory is correct in amount.
Refer to the Fig. 1 of this sheet.

[PRECAUTION]
The accessories are required for the installation of the air conditioner. Be sure to keep them until the installation work is completed.

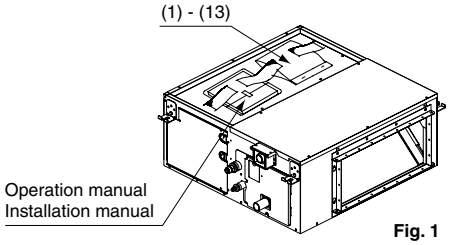

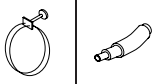

Fig. 1

Name	Metal clamp (1)	Drain hose (2)	Screws for duct flanges (3)	Insulation for fitting
Quantity	1 pc.	1 pc.	As described in table below	1 each
Shape			 M5×16 20 • 25 • 32 type: 6 40 type: 10 50 • 63 • 80 type: 18 100 • 125 type: 26	 Thin for liquid pipe (4)  Thick for gas pipe (5)

Name	Sealing pad	Clamp (8)	Washer fixing plate (9)	Wire sealing material (10)
Quantity	–	9 pcs.	4 pcs.	2 pcs.
Shape	 1 pc. Large (Dark gray) (6)  2 pcs. Middle (Dark gray) (7)			 Small (Gray)

Quantity	8 pcs.	2 pcs.	2 pcs.	• Operation manual • Installation manual
Shape			M4×8 	

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2-3 OPTIONAL ACCESSORIES

- These are two types of remote controllers: wired and wireless. Select a remote controller according to customer request and install in an appropriate place.

Table 1

Remote controller	
Wired type	
Wireless type	Heat pump type
	Cooling only type

NOTE

- If you wish to use a remote controller that is not listed in Table 1, select a suitable remote controller after consulting catalogs and technical materials.

FOR THE FOLLOWING ITEMS, TAKE SPECIAL CARE DURING CONSTRUCTION AND CHECK AFTER INSTALLATION IS FINISHED.

a. Items to be checked after completion of work

Items to be checked	If not properly done, what is likely to occur.	Check
Are the indoor and outdoor unit fixed firmly?	The units may drop, vibrate or make noise.	
Was the installation of the outdoor unit completed?	The unit may malfunction or the components burn out.	
Is the gas leak test finished?	No cooling or heating.	
Is the unit fully insulated? (Refrigerant piping, drain piping, and duct)	Condensate water may drip.	
Dose drainage flow smoothly?	Condensate water may drip.	
Does the power supply voltage conform to the indication on the name plate?	The unit may malfunction or the components burn out.	
Are wiring and piping correct?	The unit may malfunction or the components burn out.	
Is the air conditioner properly grounded?	Dangerous in case of current leakage.	
Is wiring size according to specifications?	The unit may malfunction or the components burn out.	
Is something blocking the air outlet or inlet of either the indoor or outdoor units?	No cooling or heating.	
Did you set the external static pressure?	No cooling or heating.	
Are refrigerant piping length and additional refrigerant charge noted down?	The refrigerant charge in the system is not clear.	
Did you check that no wiring connection screws were loose?	Electric shock or fire.	

Also review the “SAFETY PRECAUTIONS”.

b. Items to be checked at time of delivery

Items to be checked	Check
Are you sure the control box lid, air filter, air inlet grille, and air outlet grille are mounted?	
Did you explain about operations while showing the operation manual to your customer?	
Did you deliver the operation manual along with the installation manual to the customer?	
Did you explain the customer the handling and cleaning methods of the field supplies (e.g., the air filter, air inlet grilles, and air outlet grille)?	
Did you deliver instruction manual, if any, for the field supplies to the customer?	

c. Points for explanation about operations

The items with ⚠WARNING and ⚠CAUTION marks in the operation manual are the items pertaining to possibilities for bodily injury and material damage in addition to the general usage of the product. Accordingly, it is necessary that you make a full explanation about the described contents and also ask your customers to read the operation manual.

2-4 NOTE TO INSTALLER

- Be sure to instruct customers how to properly operate the unit (especially cleaning filters, operating different functions, and adjusting the temperature) by having them carry out operations themselves while looking at the manual.

3. SELECTING INSTALLATION SITE

〈**Hold the hanging brackets in the case of moving the indoor and outdoor units at the time of and after opening the packages. Do not impose undue force on other parts, such as the refrigerant piping, drain piping, or flanges, in particular.**〉
〈**Add heat insulation material to the indoor unit if the temperature above the ceiling is likely to exceed 30˚C and a relative humidity of 80%.**〉
〈**Make sure that the insulation material is made of glass wool or polyethylene foam, has a minimum thickness of 10 mm, and can be accommodated in the opening on the ceiling.**〉

(1) Select an installation site where the following conditions are fulfilled and that meets with your customer’s approval.
- A place where cool (warm) air is delivered to the entire room.
- Where nothing blocks the air passage.
- Where condensate can be properly drained.
- If supporting structural members are not strong enough to take the unit’s weight, the unit could fall out of place abd cause serious injury.
- Where the false ceiling is not noticeably on an incline.
- Where there is no risk of flammable gas leakage.
- Where sufficient clearance for maintenance and service can be ensured. **(Refer to Fig. 2-1)**
- Where piping between indoor and outdoor units is possible within the allowable limit. (Refer to the installation manual of the outdoor unit.)

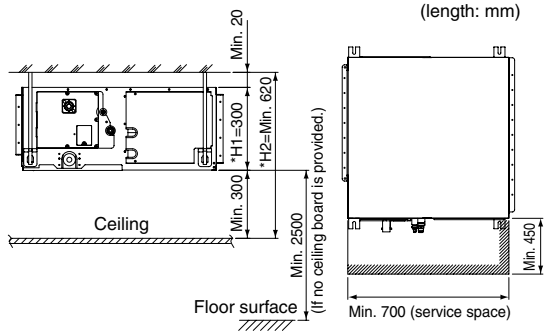

⚠ CAUTION

- Install the indoor and outdoor units, power supply wiring and connecting wires at least 1 meter away from televisions or radios in order to prevent image interference or noise. (Depending on the radio waves, a distance of 1 meter may not be sufficient enough to eliminate the noise.)

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

- In the case of the installation of a wireless remote controller, the transmission distance of the wireless remote controller may be shortened if the room has a fluorescent light of electronic lighting type (i.e., an inverter or rapid-start fluorescent light). Keep the distance between the receiver and the fluorescent light as far as possible.

(2) Use hanging bolts to install the indoor unit. Check that the place of installation withstands the weight of the indoor unit. Secure the hanging bolts with proper beams if necessary.

- The H1 dimension indicates the height of the product.
- Determine the H2 dimension by maintaining a downward slope of at least 1/100 as specified in "7. DRAIN PIPING WORK".

[Required installation place]
The dimensions indicate the minimum required space of installation.

Fig. 2-1

4. PREPARATIONS BEFORE INSTALLATION

(1) Check the positional relationship between the ceiling opening hole and the hanging bolt of the unit.
- For the maintenance, inspection, and other servicing purposes of the control box and drain pump, prepare one of the following service spaces.
  1. Inspection hatch 1 (450 × 450) for the control box and a minimum space of 300 mm for the lower part of the product. **(Refer to Fig. 2-2)**
  2. Inspection hatch 1 (450 × 450) for the control box and inspection hatch 2 for the lower part of the product (see axial direction view A-1). **(Refer to Fig. 2-3)**
  3. Inspection hatch 3 for the lower part of the product and the lower part of the control box (see axial direction view A-2). **(Refer to Fig. 2-3)**

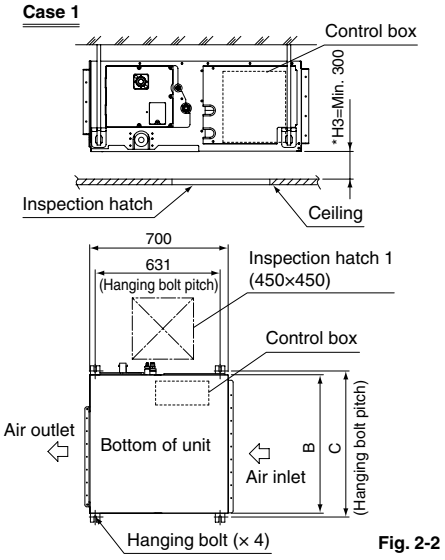

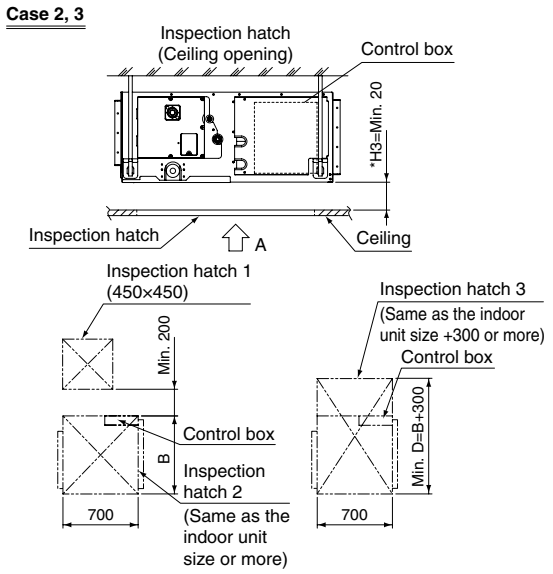

Fig. 2-2

Axial direction view A-1 Axial direction view A-2

Fig. 2-3

- Determine the H3 dimension by maintaining a downward slope of at least 1/100 as specified in "7. DRAIN PIPING WORK".

Model	B	C	D
20 • 25 • 32 type	550	583	850
40 type	700	738	1000
50 • 63 • 80 type	1000	1038	1300
100 • 125 type	1400	1438	1700

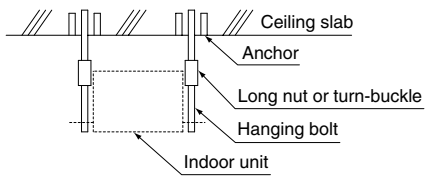

(length: mm)

(2) Mount the canvas ducts to the air outlet and inlet so that the vibration of the air conditioner will not be transmitted to the duct or ceiling. Apply a sound-absorbing material (insulation material) to the inner wall of the duct and vibration insulation rubber to the hanging bolts (refer to **8. DUCT WORK**).

(3) Open installation holes (if the ceiling already exists).
- Open the installation holes on the ceiling. Lay the refrigerant piping, drain piping, power line, transmission wiring, and remote controller wiring for the piping and wiring connection port of the unit.
  In the case of the installation of a wireless remote controller, refer to the installation manual provided with the wireless remote controller.
  Refer to **6. REFRIGERANT PIPING WORK**, **7. DRAIN PIPING WORK**, and **10. WIRING EXAMPLE AND HOW TO SET THE REMOTE CONTROLLER**.
- The ceiling framework may need reinforcement in order to keep the ceiling horizontal and prevent the vibration of the ceiling after the installation holes are opened. For details, consult your construction or interior contractor.

(4) Install the hanging bolts. Make sure that the hanging bolts are M10 in size.
- Use hole-in anchors if the hanging bolts already exist; otherwise use embedded inserts and embedded foundation bolts so that they will withstand the weight of the unit. Adjust the distance to the ceiling surface in advance.

〈 Installation example 〉

Note) All the above parts are field supplied.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

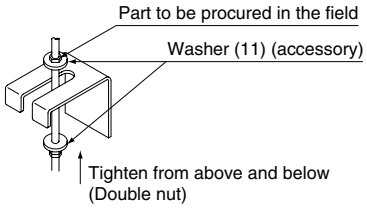

5. INDOOR UNIT INSTALLATION

〈It may be easier to install accessories (sold separately) before installing the indoor unit. Refer to the installation manuals provided to the accessories as well.〉

Be sure to use the accessories and specified parts for installation work.

(1) Temporally install the indoor unit.
- Connect the hanging brackets to the hanging bolts. Be sure to use and tighten the nut and washer (11) for each hanging bracket from both upper and lower sides of the hanging bracket. **(Refer to Fig. 3)** At that time, the fall of the washer (11) for the hanging bracket can be prevented if the washing fixing plate (9) is used.

[Fixing hanging brackets]

[Fixing method of washers]

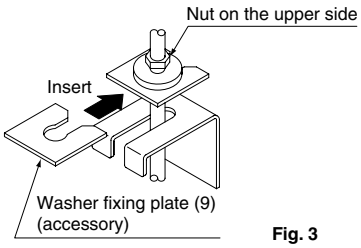

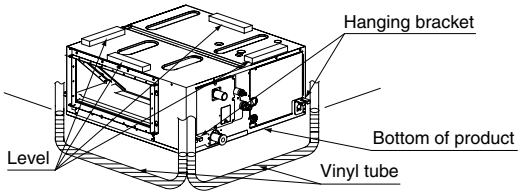

Fig. 3

⚠ CAUTION

- **During the installation work, perform the curing of the air outlet and protect the resin drain pan of the indoor unit from the intrusion of foreign substances, such as welding spatters.**
  Otherwise, water leakage may occur as a result of damage, such as hole damage, to the resin drain pan.

(2) Make adjustments so that the unit will be in the right position.
(3) Check the level of the unit.
(4) Remove the washer fixing plates for the falling prevention of the washers for the hanging brackets, tighten the nuts on the upper side, and securely fix the unit.

⚠ CAUTION

- Use the level and check that the unit is installed horizontally. (4-directions)
- In the case of using a vinyl tube in place of the level, put the both edges of the vinyl tube in close contact with the bottom of the product to make levelness adjustment.
  If the unit is installed at a slant with the drain pipe side set high, in particular, the float switch will not operate normally and water leakage may result.

6. REFRIGERANT PIPING WORK

〈As for the refrigerant piping of the outdoor unit, refer to the installation manual provided to the outdoor unit.〉
〈Perform heat insulation work on both gas piping and liquid piping, or otherwise water leakage may result.〉
〈Use the insulation material that withstands a temperature of 120˚C.〉
〈Reinforce the insulation material for the refrigerant piping if the ambient temperature is high, or otherwise dew condensation may result on the surface of the insulation material.〉
〈Make sure that the refrigerant is R410A before refrigerant piping work. If the refrigerant is different, the air conditioner will not operate normally.〉

⚠ CAUTION

This product uses new refrigerant (R410A) only. Be sure to keep the items on the right-hand side and conduct the installation work.
- **Use a dedicated pipe cutter and flare tool for R410A.**
- **When connecting the flare, apply ether oil or ester oil only to inner side of the flare.**
- **Be sure to use the flare nut provided with the unit. (Do not use a different flare nut (such as a type-1 flare nut), or otherwise refrigerant leakage may result.)**
- **Perform the curing of the piping with pinching or taping of the piping in order to prevent the intrusion of dirt, dust, and moisture into the piping.**

⚠ CAUTION

- **Be sure to use the specified type of refrigerant for the refrigeration cycle and do not contaminate the refrigerant with air.**
- **Ventilate the room in case of refrigerant leakage during installation work.**

(1) Connect the piping.
- The outdoor unit is filled with refrigerant.
- When connecting or disconnecting piping to or from the unit, **be sure to use two spanners and two torque wrenches. (Refer to Fig. 4)**

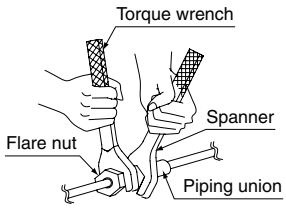

Fig. 4

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

- Refer to Table 2 for the processing dimensions of the flare.
- Use the flare nut provided with the unit.
- **Apply ether oil or ester oil only to inner side of the flare** and screw in the flare nut three to four turns first by hand at the time of connecting the flare nut.
  (Refer to Fig. 5)

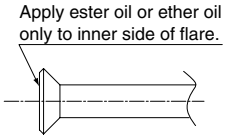

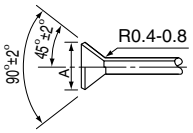

Fig. 5

- Refer to Table 2 for the corresponding tightening torque.

Table 2

Pipe size	Tightening torque	Flare dimensions A (mm)	Flare shape
ϕ 6.4	14.2 – 17.2N·m	8.7 – 9.1	
ϕ 9.5	32.7 – 39.9N·m	12.8 – 13.2	
ϕ 12.7	49.5 – 60.3N·m	16.2 – 16.6	
ϕ 15.9	61.8 – 75.4N·m	19.3 – 19.7	

⚠ CAUTION

- **Do not excessively tighten the flare nut.**
  Doing so will break the flare nut and refrigerant leakage may result.
- **Make sure that all parts around the flare are free of oil.**
  The drain pan and the resin part may be deteriorated if oil is attached.

- If no torque wrenches are available, refer to Table 3 as a standard.
  When the flare nut is tightened with the spanner, the tightening torque should increase suddenly. Tighten the flare nut further for the corresponding angle shown in Table 3.

Table 3

Pipe size	Further tightening angle	Recommended arm length of tool
ϕ 6.4	60 to 90 degrees	Approx. 150mm
ϕ 9.5	60 to 90 degrees	Approx. 200mm
ϕ 12.7	30 to 60 degrees	Approx. 250mm
ϕ 15.9	30 to 60 degrees	Approx. 300mm

(2) On completion of installation work, **check that there is no gas leakage**.

(3) Refer to the illustration on the right-hand side and be sure to perform heat insulation work on the piping joints after gas leakage checks. **(Refer to Fig. 6)**

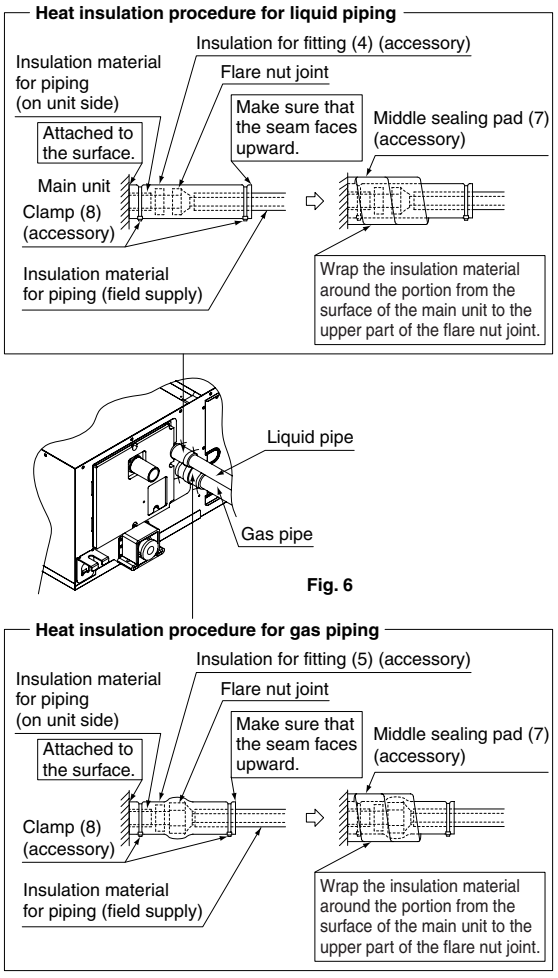

Fig. 6

- Use the insulation for fitting (4) and (5) provided to the liquid piping and gas piping, respectively, and conduct heat insulation work.
  (Tighten both edges of the insulation for fitting (4) and (5) for each joint with the clamp (8).)
- Make sure that the joint of the insulation for fitting (4) and (5) for the joint on the liquid piping and gas piping side faces upward.
- Wrap the middle sealing material (7) around the insulation for fitting (4) and (5) for the joint (flare nut part).

⚠ CAUTION

- **Be sure to perform the heat insulation of the local piping up to the piping joint.**
  If the piping is exposed, dew condensation may result. Furthermore, a burn may be caused if a human body comes in contact with the piping.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

- Perform nitrogen substituent or apply nitrogen into the refrigerant piping (see NOTE 1) in the case of refrigerant piping blazing (see NOTE 2). Then perform the flare connection of the indoor unit. **(Refer to Fig. 7)**

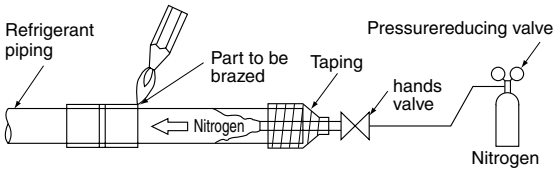

Fig. 7

⚠ CAUTION

- **Do not use any antioxidant at the time of piping blazing.** The piping may be clogged with a residual antioxidant and parts may malfunction.

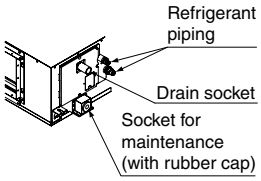

NOTE

1. At the time of blazing, set the pressure of nitrogen to approximately 0.02 MPa (close to the pressure of a breeze coming in contact with the cheek) with a decompression valve.
2. Do not use flux at the time of blazing and connecting the refrigerant piping. Use a copper phosphorus brazing alloy (BCuP-2: JIS Z 3264/BCu 93P-710/795: ISO3677), which does not require flux, for blazing.
   (Flux has a bad influence on the refrigerant piping. Chlorine-based flux will cause piping corrosion. Furthermore, if it contains fluorine, the flux will deteriorate refrigerant oil.)

- As for the branching of the refrigerant piping or refrigerant, refer to the installation manual provided with the outdoor unit.

7. DRAIN PIPING WORK

(1) Conduct drain piping work.
Check that the piping ensures proper draining.

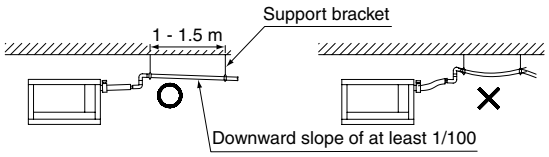

- Make sure that the diameter of the piping excluding the rising part is the same as or larger than the diameter of the connecting pipe (vinyl chloride pipe with an outer diameter of 32 mm and a nominal inner diameter of 25 mm).
- Make sure that the piping is short enough **with a downward slope of at least 1/100** and that there is no air bank formed. No drain trap is required.

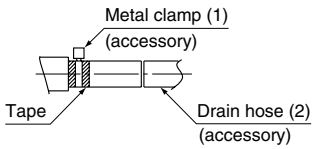

⚠ CAUTION

- The drain piping will be clogged with water and water leakage may result if the water is accumulated in the drain piping.

- Conduct drain-up piping work if the gradient is insufficient.
- Attach a support bracket at 1 to 1.5 m intervals for the prevention of piping deflection.

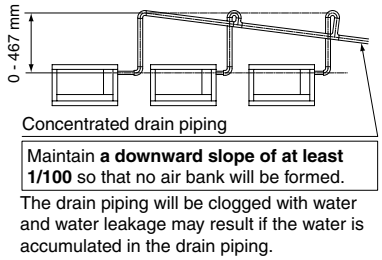

- Be sure to use the drain hose (2) and metal clamp (1). **Insert the drain hose (2) deep into the base of the drain socket, and securely fasten the metal clamp (1) within the taped part on the insertion front end of the hose.**
  Be sure to fasten the screw of the metal clamp (1) until the margin of the screw thread decreases to 4 mm or less.

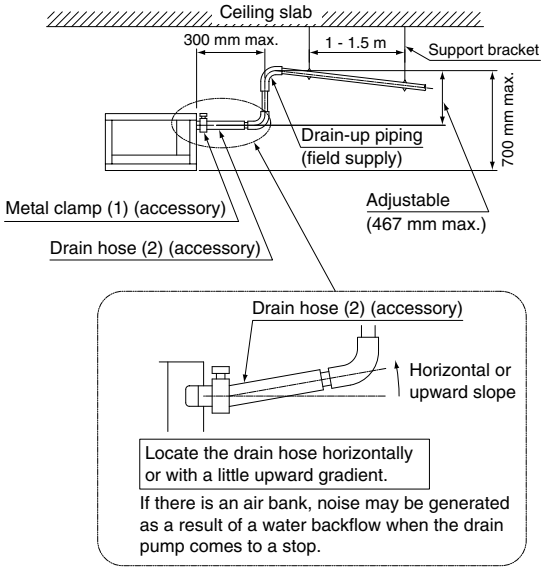

NOTE

Be sure to follow the instructions as below.

- Do not connect the drain piping directly to a sewer that smells of ammonia.
  The ammonia in the sewer may reach through the drain piping and corrode the heat exchanger of the indoor unit.
- Do not bend or twist the provided drain hose (2) in order not to impose excessive force on the hose. (Doing so may result in water leakage.)
- Take the procedure shown in the following illustration to perform concentrated drain piping.

- Select the diameter of the concentrated drain piping to suit the capacity of equipment connecting to the concentrated drain piping (see the equipment design sheet).

7

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

(2) Check the smooth draining of the piping on completion of the installation of the piping.

[Before electrical work]

⚠ CAUTION

- **A licensed electrical engineering technician must conduct electrical wiring work (including grounding work).**
- **If no licensed electrical engineering technician is available, take steps 3 and 4 after the test operation of the air conditioner is finished.**

1. Remove the control box lid, **and connect the single-phase electric wires to terminals L and N of the terminal block and the ground wire to the ground terminal**. Perform wiring according to **10-1 CONNECTING POWER SUPPLY, GROUND, REMOTE CONTROLLER, AND TRANSMISSION WIRING** in **10. WIRING EXAMPLE AND HOW TO SET THE REMOTE CONTROLLER**.

⚠ CAUTION

- In order not to impose tension on the wire connections, perform clamping securely with the provided clamp (8) specified in 3 in **10-1 CONNECTING POWER SUPPLY, GROUND, REMOTE CONTROLLER, AND TRANSMISSION WIRING**.

2. Check that the control box lid is closed before turning the air conditioner ON.
3. Provide **approximately one liter of water** gradually into the drain pan through the water inlet on the bottom of the drain socket or the outlet. Make sure that the water is not spilled onto the drain pump.
4. The drain pump will operate with the power turned ON. Check that the pump drains water smoothly. (The drain pump will stop automatically in 10 minutes.)
   The drainage can be checked with the water level change in the drain pan through the water inlet.

⚠ CAUTION

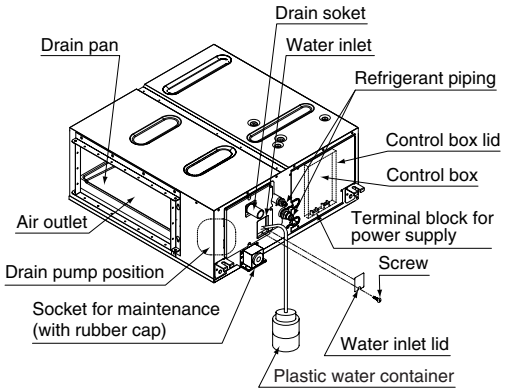

- **Do not touch the drain pump.**
  Otherwise, an electric shock may be received.
- **Do not impose external force on the float switch.**
  Otherwise, a failure may result.

5. On completion of the drainage check, shut off the power supply and disconnect the power supply line.
6. Put the control box lid to the original position.

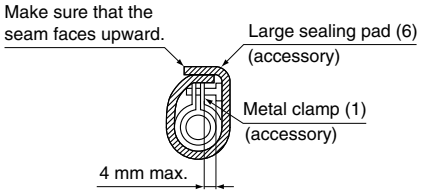

[After electrical work]

- After completion of **8. DUCT WORK** provide **approximately one liter of water** gradually into the drain pan through the water inlet on the bottom of the drain socket, and check that the water is drained while the air conditioner is in cooling operation according to **11. FIELD SETTING** and **12. TEST OPERATION** . Make sure that the water is not spilled onto the electric parts of the drain pump and others.

(3) Be sure to conduct heat insulation work on the following portions, or otherwise water leakage may occur as a result of dew condensation.
- **Drain piping indoors**
- **Drain socket**

- On completion of the drainage check, refer to the following illustration, and use the provided large sealing pad (6) and heat insulate the metal clamp (1) and drain hose (2).

8. DUCT WORK

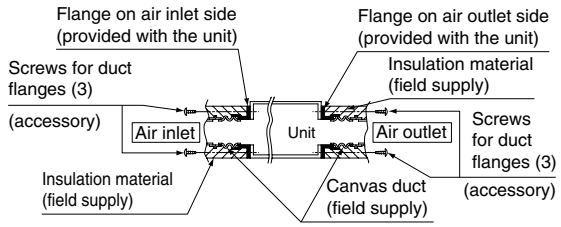

Pay the utmost attention to the following items and conduct the ductwork.

- Check that the duct will not be in excess of the setting range of external static pressure for the unit. (Refer to the technical datasheet for the setting range.)
- Attach a canvas duct each to the air outlet and air inlet so that the vibration of the equipment will not be transmitted to the duct or ceiling.
  Use a sound-absorbing material (insulation material) for the lining of the duct and apply vibration insulation rubber to the hanging bolts.
- At the time of duct welding, perform the curing of the duct so that the sputter will not come in contact with the drain pan for the filter.
- If the metal duct pass through a metal lath, wire lath, or metal plate of a wooden structure, separate the duct and wall electrically.
- Be sure to heat insulate the duct for the prevention of dew condensation. (Material: Glass wool or styrene foam; Thickness: 25 mm)
- Be sure to attach the field supply air filter to the air inlet of the unit or field supply inlet in the air passage on the air suction side. (Be sure to select an air filter with a duct collection efficiency of 50 weight percent.)
- Explain the operation and washing methods of the locally procured components (i.e., the air filter, air inlet grille, and air outlet grille) to the customer.
- Locate the air outlet grille on the indoor side for the prevention of drafts in a position where indirect contact with people.
- The air conditioner incorporates a function to adjust the fan to rated speed automatically. **(11. FIELD SETTING)**
  Therefore, do not use booster fans midway in the duct.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Connection method of ducts on air inlet and outlet sides.

- Connect the field supply duct in alignment with the inner side of the flange.
- Connect the flange and unit with the flange connection screw (3).
- Wrap aluminum tape around the flange and duct joint in order to prevent air leakage.

⚠ CAUTION

Connect the flange and unit with the flange connection screw (3) regardless of whether the duct is connected to the air inlet side.

9. ELECTRIC WIRING WORK

9-1 GENERAL INSTRUCTIONS

- All field supplied parts and materials and electric works must conform to local codes.
- Use copper wire only.
- For electric wiring work, refer to also “Wiring diagram” attached to the control box lid.
- For remote controller wiring details, refer to the installation manual attached to the remote controller.
- All wiring must be performed by an authorized electrician.
- This system consists of multiple indoor units. Mark each indoor unit as unit A, unit B..., and be sure the terminal board wiring to the outdoor unit and BS unit are properly matched. If wiring and piping between the outdoor unit and an indoor unit are mismatched, the system may cause a malfunction.
- A circuit breaker capable of shutting down power supply to the entire system must be installed.
- Refer to the installation manual attached to the outdoor unit for the size of power supply wiring connected to the outdoor unit, the capacity of the circuit breaker and switch, and wiring instructions.
- Be sure to ground the air conditioner.
- Do not connect the ground wire to gas and water pipes, lightning rods, or telephone ground wires.
  - Gas pipes : might cause explosions or fire if gas leaks.
  - Water pipes : no grounding effect if hard vinyl piping is used.
  - Telephone ground wires or lightning rods : might cause abnormally high electric potential in the ground during lighting storms.

9-2 ELECTRICAL CHARACTERISTICS

Units				Power supply		Fan motor	
Model	Hz	Volts	Voltage range	MCA	MFA	kW	FLA
FXMQ20PVE	50	220-240	Max. 264 Min. 198	0.6	16	0.09	0.5
FXMQ25PVE				0.6	16	0.09	0.5
FXMQ32PVE				0.6	16	0.09	0.5

MCA: Min. Circuit Amps (A); MFA: Max. Fuse Amps (A)
kW: Fan Motor Rated Output (kW); FLA: Full Load Amps (A)

9-3 SPECIFICATIONS FOR FIELD SUPPLIED FUSES AND WIRE

Model	Power supply wiring			Remote controller wiring Transmission wiring	
	Field fuses	Wire	Size	Wire	Size
FXMQ20PVE	16A	H05VV-U3G	Size must comply with local codes.	Sheathed wire (2 wire)	0.75 - 1.25 mm²
FXMQ25PVE					
FXMQ32PVE					
FXMQ40PVE					
FXMQ50PVE					
FXMQ63PVE					
FXMQ80PVE					
FXMQ100PVE					
FXMQ125PVE					

Allowable length of transmission wirings and remote controller wiring are as follows.

(1) Outdoor unit – Indoor unit:
Max. 1000 m (Total wiring length: 2000 m)

(2) Indoor unit – Remote controller:
Max. 500 m

NOTE

1. Shows only in case of protected pipes. Use H07RN-F in case of no protection.
2. Vinyl cord with sheath or cable (Insulated thickness : 1mm or more)

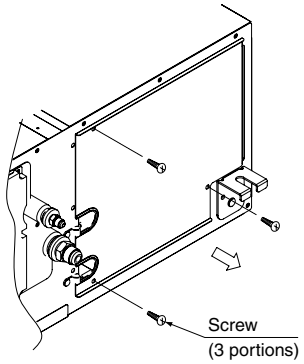

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

10. WIRING EXAMPLE AND HOW TO SET THE REMOTE CONTROLLER

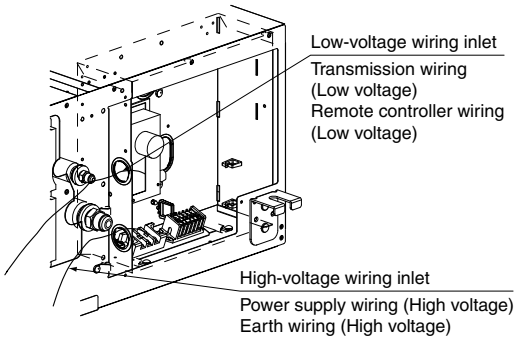

10-1 CONNECTING POWER SUPPLY, GROUND, REMOTE CONTROLLER, AND TRANSMISSION WIRING

(Remove the control box lid as shown below and connect each wire.)

(1) Remove the control box lid.

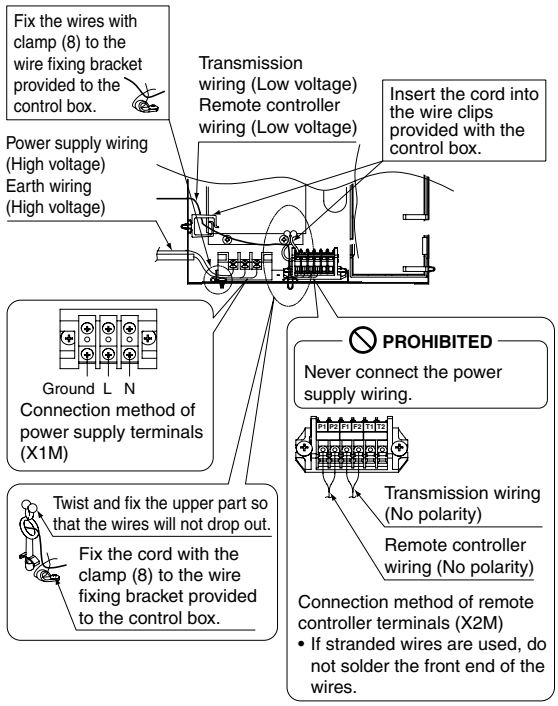

(2) Lay the wires in the control box through the wire inlet on the side of the control box.

⚠ CAUTION

- Do not lay the remote controller wiring or transmission wiring along with the power supply wiring or other electric wiring in the same route. Separate the remote controller wiring and transmission wiring at least 50 mm from the power supply wiring or other electric wiring, or otherwise malfunctions or failures may be caused by external electric noise that may interfere with the remote controller wiring and transmission wiring.
- For the installation and wiring of the remote controlle r, refer to the remote controller installation manual provided with the remote controller.
- For power supply wiring, refer to the wiring diagram as well.
- Be sure to connect the remote controller wiring and transmission wiring correctly to the right terminal block.

(3) Follow the instructions below, and lay the wires in the control box.

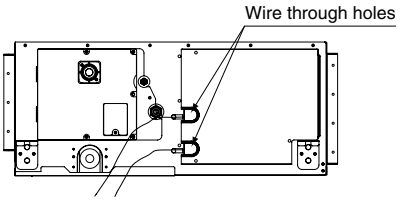

⚠ WARNING

Trim and lay the wiring neatly and attach the control box lid securely.

An electric shock or fire may result if the control box lid catches any wiring or the wires push up the lid.

(4) Put the control box lid, and wrap the wire sealing material (Small) (10) around the wires so as to block the wire through holes.

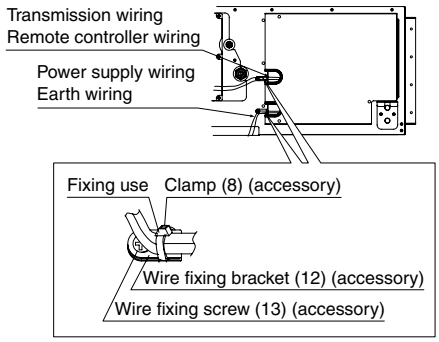

⚠ CAUTION

- After all the wiring connections are done, fill in any gaps in the through holes with putty or insulation (procured locally) to prevent small animals and insects from entering the unit from outside. (If any do get in, they could cause short circuits in the control box.)

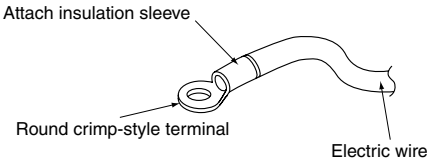

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

(5) Mount the provided wire fixing bracket (12) with the wire fixing screw (13). Fix each wire with the provided clamp (8).

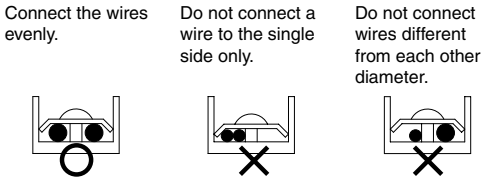

[Precautions for Power Supply Wiring]

- Connect round crimp-style terminals provided with insulation sleeves to the terminal block for power supply.

Be sure to follow the instructions provided below if the specified terminals cannot be used.
Otherwise, abnormal heat may be generated as a result of the loosening of the wires.

- If stranded wires are used, do not solder the front end of the wires.
- Connect proper wires securely and fix the wires so that external force will not be imposed on the terminals.
- Use an appropriate screwdriver to tighten the terminal screws. The screw heads may be damaged if the screwdriver is too small and the terminal screws will not be tightened properly.
- Do not tighten the terminal screws excessively, or otherwise the screw heads may be damaged.
- Refer to the table below for the required tightening torque values of the terminal screws.

	Tightening torque (N·m)
Terminal block for remote controller and transmission wires	0.80 - 0.96
Terminal block for power supply	1.18 - 1.44

10-2 WIRING EXAMPLE

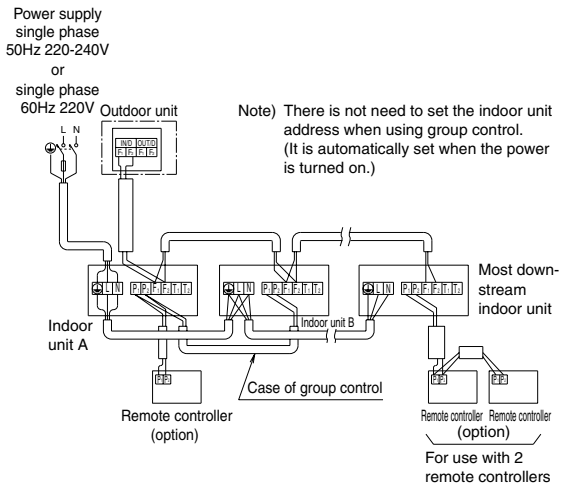

⚠ WARNING

Install an earth leakage breaker.
The installation of an earth leakage breaker is imperative for the prevention of electric shocks and fire accidents.

No. 1 system: When using 1 remote controller for 1 indoor unit

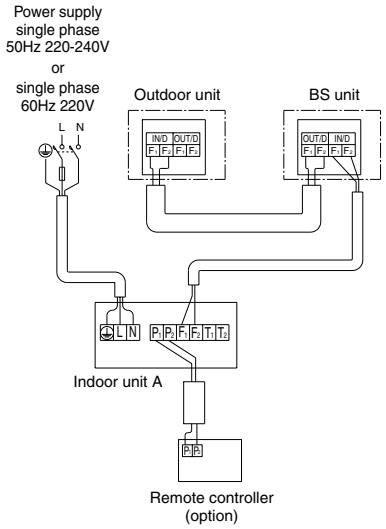

No. 2 system: For group control or use with 2 remote controllers

7

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

No. 3 system: When including BS unit

[PRECAUTIONS]

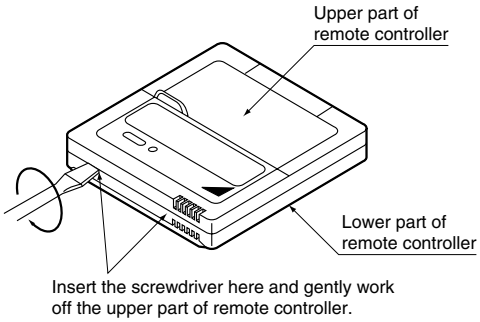

1. If no earth leakage breaker is required, install a breaker or load switch with a fuse for the wiring. If an earth leakage breaker is required, make sure that the earth leakage breaker is designed to protect the air conditioner from ground faults, overloads, and short-circuiting.
2. The remote controller wiring (P1 and P2) and transmission wiring (F1 and F2) have no polarity.

10-3 CONTROL BY 2 REMOTE CONTROLLERS (Controlling 1 indoor unit by 2 remote controllers)

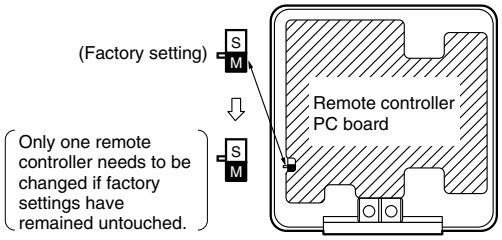

- Set one of the remote controllers to main and the other to sub in the case of remote control with two remote controllers.

Switching Main/Sub

(1) Insert a ⊖ screwdriver into the clearance between the grooves of the lower casing and the upper casing to remove the upper casing. (2 grooves) (The remote controller PCB is attached to the upper casing.)

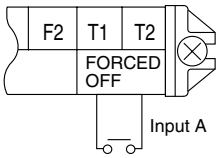

(2) Set the main/sub switch on one of the remote controller PCBs to sub. (Keep the switch of the other remote controller PCB set to main.)

10-4 COMPUTERISED CONTROL (FORCED OFF AND ON/OFF OPERATION)

(1) Wire specifications and how to perform wiring
- Connect the input from outside to terminals T1 and T2 of the terminal block for remote controller.

Wire specification	Sheathed vinyl cord or cable (2 wire)
Gauge	0.75 - 1.25 mm^2
Length	Max. 100 m
External terminal	Contact that can ensure the minimum applicable load of 15 V DC, 10 mA.

(2) Actuation
- The following table explains FORCED OFF and ON/OFF OPERATIONS in response to Input A.

FORCED OFF	ON/OFF OPERATION
Input "ON" stops operation (impossible by remote controllers.)	Input OFF → ON turns ON unit.
Input OFF enables control by remote controller.	Input ON → OFF turns OFF unit.

(3) How to select FORCED OFF and ON/OFF OPERATION
- Turn the power on and then use the remote controller to select operation.

10-5 CENTRALIZED CONTROL

- For centralized control, it is necessary to designate the group No. For details, refer to the manual of each optional controllers for centralized control.

11. FIELD SETTING

NOTE

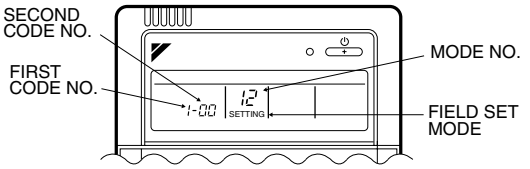

- Before the test operation of the outdoor unit as explained in **12. TEST OPERATION**, be sure to make the following field settings as explained in **11. FIELD SETTING**.

Make sure the control box lids are closed on the indoor and outdoor units.
Field setting must be made from the remote controller in accordance with the installation condition.

- Setting can be made by changing the "MODE NO.", "FIRST CODE NO.", and "SECOND CODE NO.".

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

- For setting and operation, refer to the “FIELD SETTING” in the installation manual of the remote controller.

  - Set the remote controller to the “FIELD SET MODE”. For details, refer to the “HOW TO SET IN THE FIELD”, in the remote controller manual.
  - When in the “FIELD SET MODE”, select “MODE NO. 12” , then set the “FIRST CODE NO.” to “1”. Then set “SECOND CODE NO.” to “01” for FORCED OFF and “02” for ON/OFF OPERATION. (FORCED OFF at factory set)

With Wireless Remote Controller Used

Set the wireless remote controller address before using the wireless remote controller.
For the setting method of the address, refer to the operation manual provided with the wireless remote controller.

NOTE

- A “MODE NO.” is set on a group basis. To make a mode setting on a room unit basis or check the setting made, however, set the corresponding mode number in the parentheses.

1. Settings for Optional Accessories

- In the case of connecting optional accessories, refer to the operation manuals provided with the optional accessories and make necessary settings.

2. External Static Pressure Settings

Make settings in either method (a) or method (b) as explained below.

(a) Use the airflow auto adjustment function to make settings.
Airflow auto adjustment: The volume of blow-off air is automatically adjusted to the rated quantity.

(1) Check that power supply wiring to the air conditioner is completed along with duct installation. If a closing damper is installed in the air-conditioning system, make sure that the closing damper is opened. Furthermore, check that the air filter as a field supply is attached to the air passage on the suction side.

(2) If there are a number of air outlets and inlets, adjust the throttles so that the airflow rate of each air outlet and inlet will coincide with the designed airflow rate. At that time, operate the air conditioner in “fan operation mode”. To change the airflow rate, press and set the airflow adjustment button of the remote controller to HH, H, or L.

(3) Make settings for airflow automatic adjustment. After setting the air conditioner to “fan operation mode”, stop the air conditioner, go to “FIELD SET MODE”, select “MODE NO. 21” (11 in the case of group settings), set the setting “FIRST CODE NO.” to 7, and set the setting “SECOND CODE NO.” to 03.
Return to normal mode after these settings, and press the ON/OFF OPERATION button. Then the operation lamp will be lit and the air conditioner will go into fan operation for airflow automatic adjustment. Do not adjust the throttles of the air outlets or inlets during automatic adjustment of the air conditioner. After the air conditioner runs approximately one to eight minutes, the air conditioner will finish airflow adjustment automatically, the operation lamp will be turned OFF, and the air conditioner will come to a stop.

Table 4

MODE NO.	FIRST CODE NO.	Setting contents
11 (**21**)	7	Airflow adjustment
SECOND CODE NO.		
01	02	03
OFF	Completion of airflow adjustment	Start of airflow adjustment

(4) After the air conditioner stops operating, check with “MODE NO. 21” on an indoor unit basis that 02 is set for the “SECOND CODE NO.” in Table 4. If the air conditioner does not stop operating automatically or the “SECOND CODE NO.” is not 02, repeat steps from (3). If the outdoor unit is not turned ON, U4 or UH as explained in Table 8 will be displayed. This display is not problematic, because this function is set for the indoor unit. Continue setting the function.
After setting this function, be sure to turn ON the outdoor unit before the test operation of the outdoor unit.
If any other error is displayed, refer to Table 8 and the operation manual provided with the outdoor unit and check the defective point.

⚠ CAUTION

- If there is any change after airflow adjustment in the ventilation paths (e.g., the duct and air outlet), be sure to make airflow auto adjustment again.
- Consult your Daikin representative if there is any change in the ventilation paths (e.g., the duct and air outlet) after the test operation of the outdoor unit is finished or the air conditioner is moved to another place.

(b) Select External Static Pressure with Remote Controller
Check that 01 (OFF) is set for the “SECOND CODE NO.” in “MODE NO. 21” for airflow adjustment on an indoor unit basis in Table 4. The “SECOND CODE NO.” is set to 01 (OFF) at factory set. Change the “SECOND CODE NO.” as shown in Table 5 according to the external static pressure of the duct to be connected.

(1) The “SECOND CODE NO.” is set to 07 (an external static pressure of 100 Pa) at factory set. (FXMQ40 · 50 · 63 · 80 · 100 · 125PVE)
The “SECOND CODE NO.” is set to 02 (an external static pressure of 50 Pa) at factory set. (FXMQ20 · 25 · 32PVE)

*1 The FXMQ50 · 63 · 80 · 100 · 125PVE cannot be set to 30 Pa.
*2 The FXMQ40PVE cannot be set to 180 or 200 Pa.
*3 The FXMQ20 · 25 · 32PVE cannot be set to 110-200 Pa.

7

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Table 5

External Static Pressure	MODE NO.	FIRST CODE NO.	SECOND CODE NO.
30Pa (*1)	13 (23)	06	01
50Pa			02
60Pa			03
70Pa			04
80Pa			05
90Pa			06
100Pa			07
110Pa (*3)			08
120Pa (*3)			09
130Pa (*3)			10
140Pa (*3)			11
150Pa (*3)			12
160Pa (*3)			13
180Pa (*2)(*3)			14
200Pa (*2)(*3)			15

⚠ CAUTION

Keep in mind that a shortage of airflow quantity or water leakage will result because the air conditioner will be operated outside the rated range of airflow quantity if the external static pressure is wrongly set.

3. Filter Sign Settings

- The remote controller is provided with an LCD that tells the time of air filter cleaning.
- If the air conditioner is used in places with excessive dust, change the "SECOND CODE NO." as shown in Table 6. The "SECOND CODE NO." is set to 01 (standard) at factory set.

Table 6

Dirt	Time for display	MODE NO.	FIRST CODE NO.	SECOND CODE NO.
Standard	Approximately 2500 hours	10 (20)	0	01
Excessive dust	Approximately 1250 hours			02
No display (*)			3	

* Select "No display" under conditions in which the cleaning display is not required, such as the time of regular maintenance.

12. TEST OPERATION

Refer to the installation manual of the outdoor unit.

- The operation lamp of the remote controller will flash when an malfunction occurs. Check the malfunction code on the liquid crystal display to identify the point of trouble. An explanation of malfunction codes and the corresponding trouble is provided in "CAUTION FOR SERVICING" of the outdoor unit. If any of the items in Table 8 are displayed, there may be a problem with the wiring or power, so check the wiring again.

Table 7

Remote controller display	Contents
"A8" lit	Error in power supply voltage to indoor unit.
"C1" lit	Fan driver PCB of indoor unit ↔ indoor control PCB transmission error.
"C6" lit	Improper combination of fan driver PCB of indoor unit or setting failure in control PCB type.
"U3" lit	Test operation of outdoor unit has not been finished.

Table 8

Remote control display	Content
"⚠" is lit up	• There is a short circuit at the FORCED OFF terminals (T1, T2)
"U4" is lit up "UH" is lit up	• The power on the outdoor unit is off. • The outdoor unit has not been wired for power supply. • Incorrect wiring for the transmission wiring and / or FORCED OFF wiring.
No display	• The power on the indoor unit is off. • The indoor unit has not been wired for power supply. • Incorrect wiring for the remote controller wiring, the transmission wiring and / or the FORCED OFF wiring.

⚠ CAUTION

If interior finish work is continuing on completion of the test operation of the air conditioner, explain the customer not to operate the air conditioner until the interior finish work is completed for the protection of the air conditioner.
Otherwise, substances that will be generated from interior finish work materials, such as paint and adhesive agents, may contaminate the air conditioner.

Installation

DAIKIN

AIR CONDITIONER

Directions for Mounting Access Panels

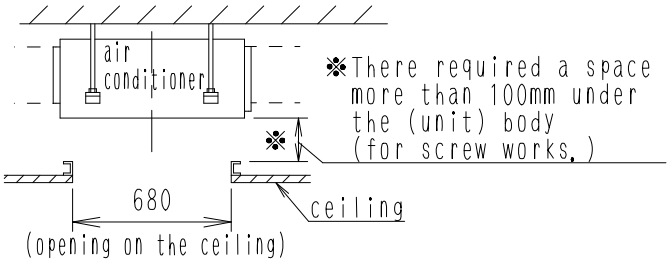

READ THESE INSTRUCTIONS CAREFULLY BEFORE INSTALLATION.

●KEEP THIS MANUAL IN A HANDY PLACE FOR FUTURE REFERENCE.

Before Mounting the Panel

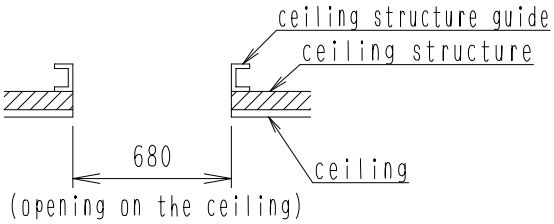

1. Prepare an opening on the ceiling.

Duct Type

kit No.	A
KTBJ25K36	606
KTBJ25K56 KTB25KA56	756
KTBJ25K80 KTB25KA80	1056
KTBJ25K160 KTB25KA160	1456

2. Mount the ceiling structure guide on the edge of the ceiling structure.

Service Works for Duct Type Models

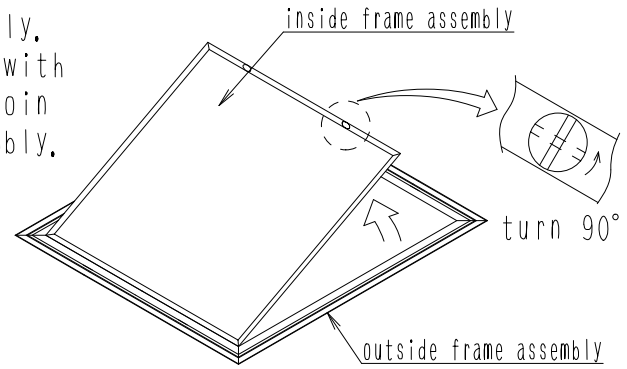

Service works for maintenance shall be done (accessed) from the ※ space (the above).
Please prepare short-length screw drivers (100mm or less.)

C : 3P225173A

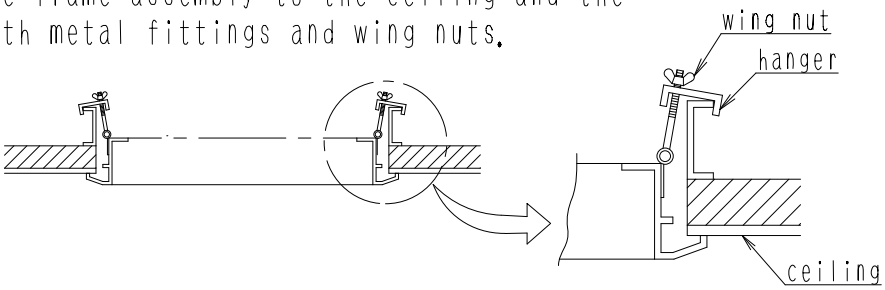

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Mounting the Panel

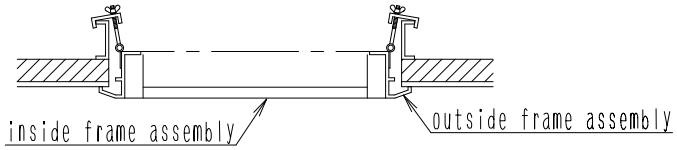

1. Remove the inside frame assembly.
   • Turn the lock 90° to the left with a flat-top screw driver or a coin to open the inside frame assembly.

2. Mount the outside frame assembly on the ceiling.
   • Fasten the frame assembly to the ceiling and the guide with metal fittings and wing nuts.

3. Mount the inside frame assembly to the fixed outside frame assembly.

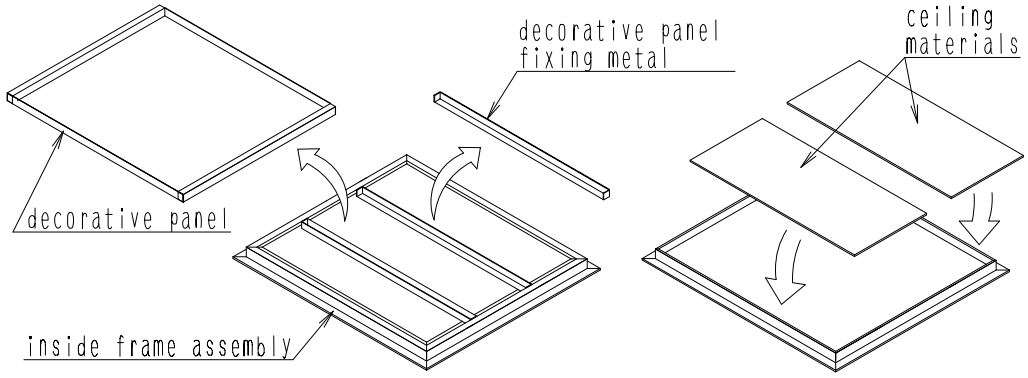

Mounting of Ceiling Materials

Ceiling materials can be optionaly mounted to the inside frame assembly.
Mounting methods are as follows:-

① Remove the decorative panel fixing metal of the inside frame assembly.
② Take out the decorative panel and mount the ceiling materials instead.
③ Put back the fixing metal (①) to hold the ceiling materials.

(Note) Decorative panel is not required when mounting ceiling materials.

Installation

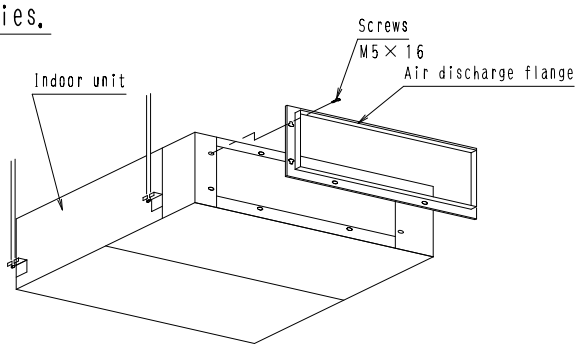

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Installation

Air discharge adapter installation manual

1. This kit contains the following parts and accessories.

Name	Quantity			
	KDAJ25K36A	KDAJ25K56A	KDAJ25K71A	KDAJ25K140A
	KDAJ25KA36	KDAJ25KA56	KDAJ25KA71	KDAJ25KA140
	KDA25D32	KDA25D45	KDA25D63	KDA25D125
Air discharge adapter	1	1	1	1
Installation manual	1	1	1	1
Screws	8	8	8	12

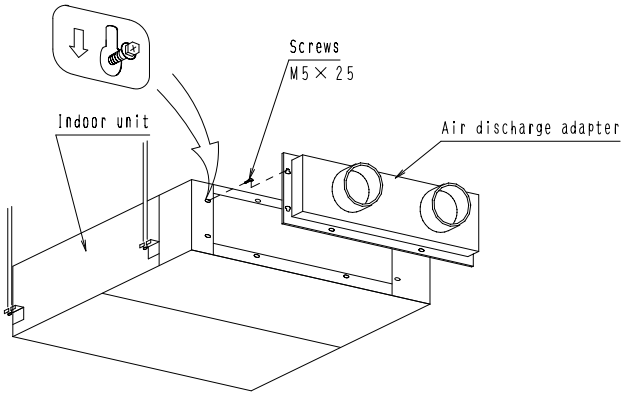

2. Required tools

Screwdriver ⊕

3. Operating procedures

1. Remove the air discharge flange from indoor unit.
2. Attach the air discharge adapter to the indoor unit.
   ① Tighten two installation screws to the indoor unit. (Leave about 20mm of the thread exposed.)
   ② Hang the air discharge adapter on the screws and then tighten all screws definitively.

4. Cautions for the installation

Fasten the screws tightly so as no gap between the indoor unit and the air discharge adapter.

DAIKIN

AIR CONDITIONER Mounting plate for adaptor PCB. Installation manual

KRP4A96

READ THESE INSTRUCTIONS CAREFULLY BEFORE INSTALLATION.
KEEP THIS MANUAL IN A HANDY PLACE FOR FUTURE REFERENCE.

2P226887-1

Caution

- This plate is mountable on the ceiling mounted duct type unit. After confirming the indoor unit model name, mount this plate on the unit listed in the table shown bottom.
- When mounting the plate, see also the indoor unit installation manual and the adaptor PCB (Printed Circuit Board) mounting instruction.
- Fixing method is not on the installation manual attached to the adapter PCB. Please follow directions on this sheet.

Kit name	Indoor unit model that party crowded is possible		
KRP4A96	Ceiling mounted duct type unit	SPLIT	FHMP～ FBQ～
		VRV	FXYMP～ FXMQ～

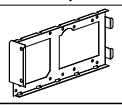

*See the DAIKIN catalog for the details

Accessories

- Check if the following accessories are included with your kit.

<Precaution>

The accessories are required for the installation of the air conditioner. Be sure to keep them until the installation work is completed.

Name	Adaptor plate	Screw	Sealing material	Clamp	Installation manual
Quantity	1PC.	2PCS.	2PC.	8PCS.	1PC.
Shape		 M4×8			

<Caution>

- All field supplied parts and materials and electric works must conform to local codes.
- Use copper wire only.
- For electric wiring work, refer to also "Wiring diagram" attached to the control box lid.
- All wiring must be performed by an authorized electrician.
- A circuit breaker capable of shutting down power supply to the entire system must be installed.

❶ Mounting the adaptor plate

《Wiring to the indoor unit》

① Remove the control box lid. [Fig.1]

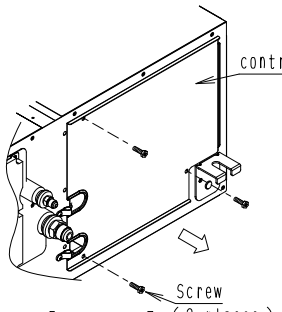

② Connect the wiring to the indoor unit. (The work is easier if the wiring is connected first.)

- See the instruction attached to the adaptor PCB for the place where to connect the wires on the indoor unit.
- Please see the connector location on (figure 1) on the ❷ How to mount the adaptor PCB and handle the wiring .

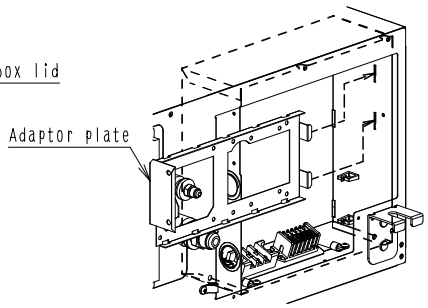

《Mounting the adaptor plate》

① Putting the claw of the adaptor plate into the hole of the box. [Fig.2]

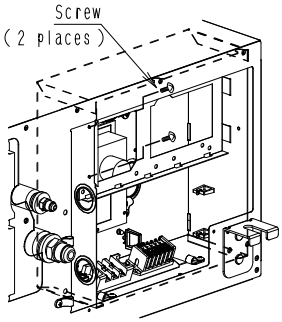

② Fix the box with the attached fixing screws at two places. [Fig.3]

[Fig.1]

[Fig.2]

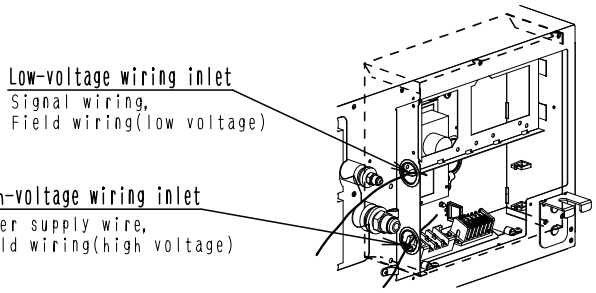

[Fig.3]

❷ How to mount the adaptor PCB and handle the wiring

《How To Lead-in External Wires 》

Lay the wires in the control box through the wire inlet on the side of the control box.

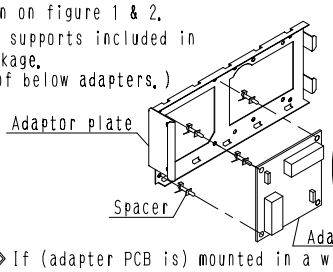

2P226887

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

《How to mount the adaptor PCB》

① Connect the wiring to the adaptor PCB.
(The work is easier if the wiring is connected to the PCB first.)
● See the instruction attached to the adaptor PCB for where to connect the wiring.

② Mount adapter PCB onto the mounting plate (in the direction) as shown on figure 1 & 2.
● Use PCB supports included in the package.
(for any of below adapters.)

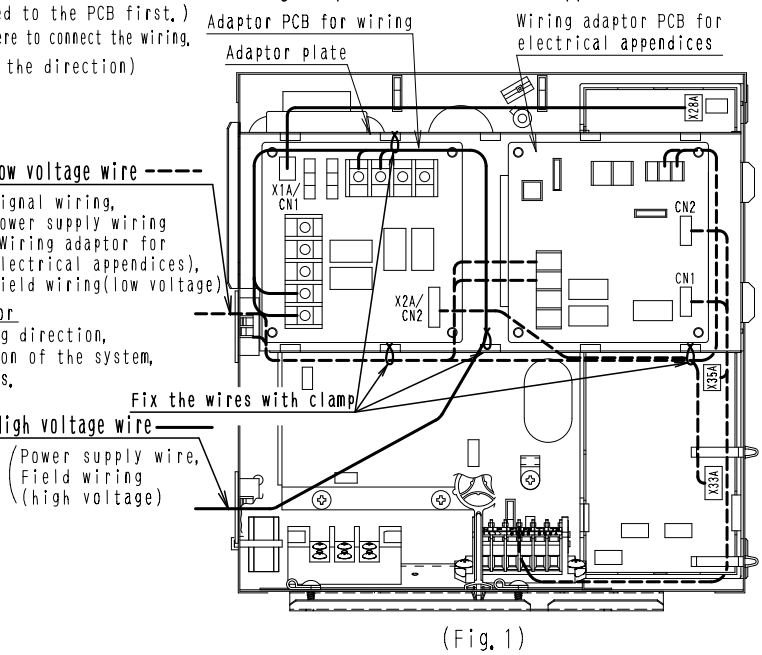

《Caution》If (adapter PCB is) mounted in a wrong direction, electric noise may cause malfunction of the system, or may influence upon other devices.

Adaptor PCB		Place where to mount
Adaptor for wiring	KRP1C13 KRP1C64	(Fig. 1)
Wiring adaptor for electrical appendices (※1)	KRP4A1 KRP4AA51 KRP2A1 KRP2A61	(Fig. 1)
External control adaptor for outdoor unit (※1)	DTA104A1 DTA104A61	(Fig. 2)

(※1) adapter cannot be mounted 2 or more together.

〈Adaptor for wiring, Wiring adaptor for electrical appendices〉

(Fig. 1)

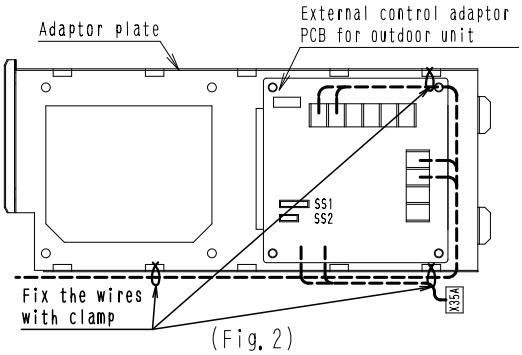

《How to handle the wiring》

《Caution》Do not make high-voltage and low-voltage wires run in parallel. Electric noise may cause malfunction of the system, or may influence upon other devices.

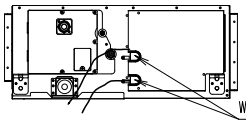

① Fix the internal wirings.
Bind the wiring from the adaptor plate to the indoor unit control box according to the drawing shown on the right with the attached clamp.
(Put the clamping materials through the corner holes to fix wires.)
● Bind the the surplus wires and the other wiring together with the clamp.

② Put the control box lid, and wrap the wire sealing material around the wires so as to block the wire through holes.
● Take precautions to prevent the wires from getting caught.
● After all the wiring connections are done, fill in any gaps in the through holes with putty or insulation (procured locally) to prevent small animals and insects from entering the unit from outside.
(If any do get in, they could cause short circuits in the control box.)

〈External control adaptor for outdoor unit〉

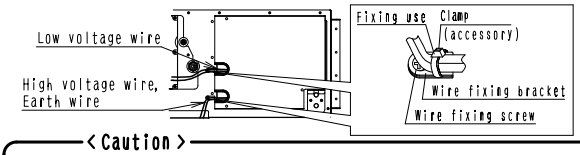

(Fig. 2)

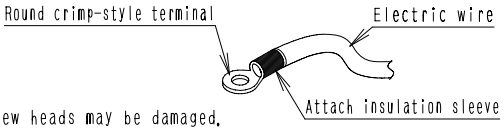

⚠Warning
Trim and lay the wiring neatly and attach the control box lid securely.
An electric shock or fire may result if the control box lid catches any wiring or the wires push up the lid.

③ Connect round crimp-style terminals provided with insulation sleeves to the terminal block for power supply.
● See the instruction attached to the indoor unit.

《Caution》
- Connect proper wires securely and fix the wires so that external force will not be imposed on the terminals.
- Use an appropriate screwdriver to tighten the terminal screws. The screw heads may be damaged if the screwdriver is too small and the terminal screws will not be tightened properly.
- Do not tighten the terminal screws excessively, or otherwise the screw heads may be damaged.
- Refer to the table below for the required tightening torque values of the terminal screws.

	Tightening torque (N・m)
Terminal block for remote controller and transmission wires	1.18 – 1.44
Terminal block for power supply, and wiring the units	1.18 – 1.44

1. Features

Ceiling mounted duct type is newly added to the line-up of the indoor unit for VRV series, which gives you much more flexibility in designing of the air conditioning system to satisfy the needs of individual air-conditioning even in the broad area.

■ **High external static pressure allows extensive duct work for flexible applications.**

Service Space

Please attach additional thermal insulation material to the unit body when it is believed that the relative humidity in the ceiling exceeds 80%. Use glass wool, polyethylene foam, or similar with a thickness of 10 mm or more as thermal insulation material.

(1) Select an installation site where the following conditions are fulfilled and that meets with your customer's approval.
- In the upper space (including the back of the ceiling) of the indoor unit where there is no possible dripping of water from the refrigerant pipe, drain pipe, water pipe, etc.
- Where optimum air distribution can be ensured.
- Where nothing blocks the air passage.
- Where condensate can be properly drained.
- If supporting structural members are not strong enough to take the unit's weight, the unit could fall out of place and cause serious injury.
- Where the false ceiling is not noticeably on an incline.
- Where there is no risk of flammable gas leakage.
- Where sufficient clearance for maintenance and service can be ensured. **(Refer to Fig. 1)**
- Where piping between indoor and outdoor units is possible within the allowable limit. (Refer to the installation manual of the outdoor unit.)

⚠ CAUTION

- Install the indoor and outdoor units, power supply wiring and connecting wires at least 1 meter away from televisions or radios in order to prevent image interference or noise.
  (Depending on the radio waves, a distance of 1 meter may not be sufficient enough to eliminate the noise.)

(2) Use suspension bolts for installation. Check whether the ceiling is strong enough to support the weight of the unit or not. If there is a risk, reinforce the ceiling before installing the unit.

〈FXMQ200 · 250MAVE〉

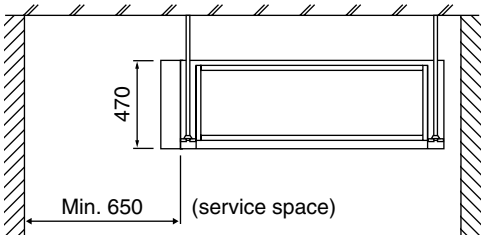

Fig. 1 (length : mm)

C : 3P086156-6U

Note:
Above figure means minimum value. Please keep these value at least.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Bolt Pitch

(1) Relative positions of indoor unit and suspension bolt. **(Refer to Fig. 2)**

〈 FXMQ200 · 250MAVE 〉

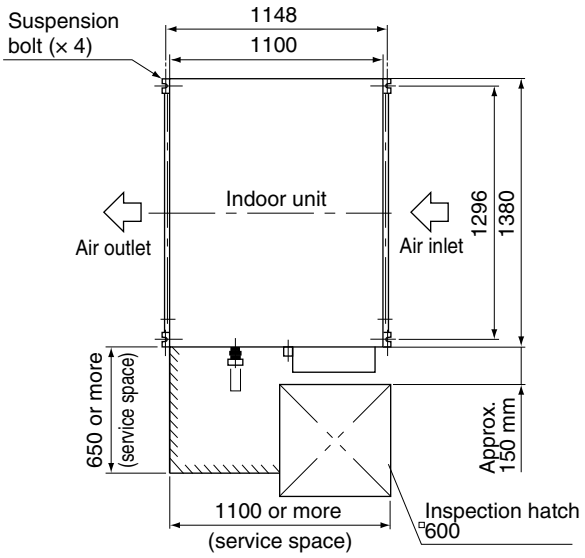

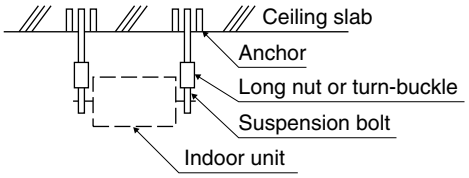

Fig. 2 (length : mm)

(2) Install a canvass duct to the air discharge outlet and air inlet so that vibration from the machine body isn't transmitted to the duct or ceiling.
You should also apply acoustic (insulation material) to the inside of the duct, and vibration insulation rubber to the suspension bolts.

(3) Install suspension bolts. (Use bolts of 10 mm diameter.)
- Install the equipment where supporting structures are strong enough to bear the equipment's weight. Use embedded inserts or anchor bolts with new buildings and hole-in-anchors with old buildings.

〈 Installation example 〉

Note) All the above parts are field supplied.

C : 3P086156-6U

8

Drain Piping Work

〈〈**Rig the drain pipe as shown below and take measures against condensation. Improperly rigged piping could lead to leaks and eventually wet furniture and belongings.**〉〉
〈〈**Insulate the drain hose inside the building.**〉〉

(1) Carry out the drain piping.

FXMQ200 · 250MAVE

- A drain trap need not be installed.
- The diameter of the piping is the same as that of the connecting pipe (PS1B), and should be kept equal to or greater than that of the connecting pipe.

(2) After piping work is finished, check drainage flows smoothly.

FXMQ200 · 250MAVE

- Open the water supply port, add approximately 1 liter of water slowly into the drain pan and check drainage flow.

⚠ CAUTION

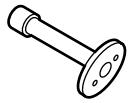

- Drain piping connections
  Do not connect the drain piping directly to sewage pipes that smell of ammonia. The ammonia in the sewage might enter the indoor unit through the drain pipes and corrode the heat exchanger.

Drain Pump Kit

Specification

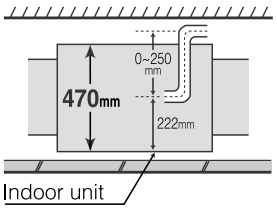

Items \ Model	KDU30L250VE
Power Supply	Single phase 220V 50/60Hz
Power Consumption (W)	19/17 (50/60Hz)
Drain-up Lift (mm)	Standard drain outlet of the unit + 222 + 250
Drain Outlet	VP25 (Internal diameter ϕ25, external diameter ϕ32)
Safety Device	Float switch
Weight (kg)	10
Applied Models	200 · 250 Class

Precaution at use

1. When this kit will be used with the natural evaporation pan type humidifier together, the piping of unit's drain and humidifier's drain can be used in common.
2. Be sure to do test run (cooling) to make sure the drain flows out.
3. Prohibit providing a drain trap when the drain pump kit will be mounted.

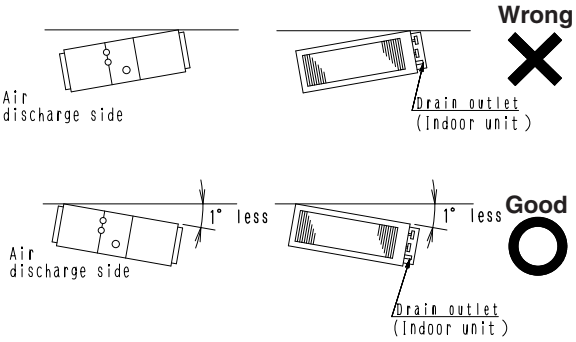

Installation Space

KDU30L250VE

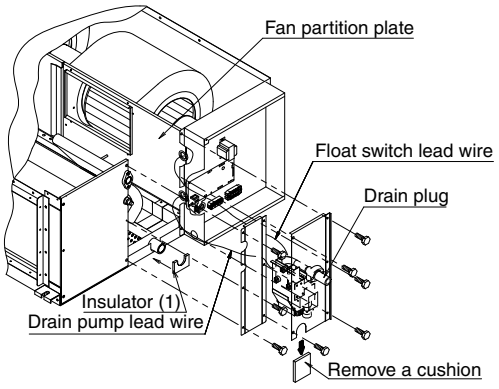

If the drain pump kit has already been installed, note the following when installing the indoor unit.

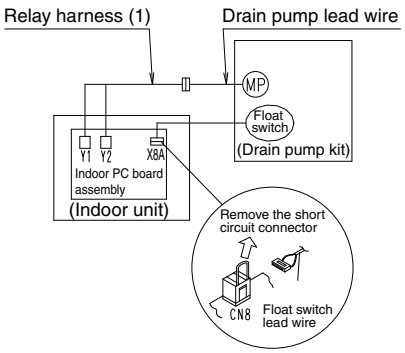

· Do not install the indoor unit on an incline against drainage flow (away from the drain outlet). This can lead to water leaks.

Internal Wiring Method

■ **KDU30L250VE**

1. Features

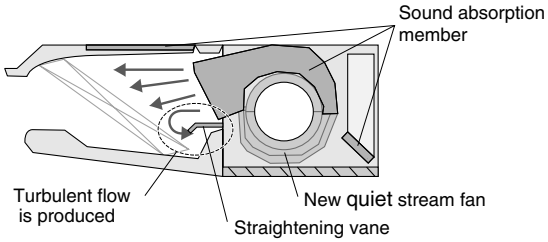

External Appearance

Slim body with quieter and wider air flow

●Adoption of newly designed QUIET STREAM FAN

Uses the new quiet stream fan and many more quiet technologies.

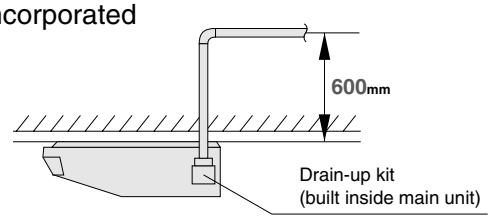

●Low operating sound

(dB(A))

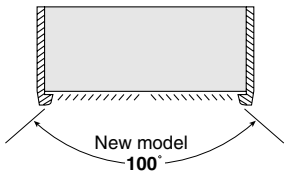

Class	32	63	100
Operating sound (H/L)	36/31	39/34	45/37

●Installation is easy

- Drain-up kit (optional) can be easily incorporated

●Wide air discharge openings produce a spreading 100˚ air flow

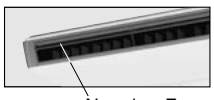

●Maintenance is easy

- New Non-dew Frap with no implanted

Bristle-free Frap minimizes contamination and makes cleaning simpler.

- Easy to clean flat design
- Maintenance is easier because everything can be performed from below the unit
- A long-life filter (maintenance free up to one year) is equipped as standard

FXHQ63MAVE				0.8	15	0.062	0.6	115	115
FXHQ100MAVE				0.9	15	0.130	0.7	135	135

Symbols:

MCA : Min. Circuit Amps (A)
MFA : Max. Fuse Amps (See note 5)
KW : Fan Motor Rated Output(KW)
FLA : Full Load Amps(A)
IFM : Indoor Fan Motor

9

Note:

1. Voltage range

   Units are suitable for use on electrical systems where voltage supplied to unit terminals is not below or above listed range limits.

2. Maximum allowable voltage unbalance between phases is 2%.

3. MCA/MFA

   MCA = 1.25 X FLA

   MFA ≦ 4 X FLA

   (Next lower standard fuse rating. Min. 15A)

4. Select wire size based on the MCA.

5. Instead of fuse, use Circuit Breaker.

Model	220~240V 50Hz	
	H	L
FXHQ32MA	36	31
FXHQ63MA	39	34
FXHQ100MA	45	37

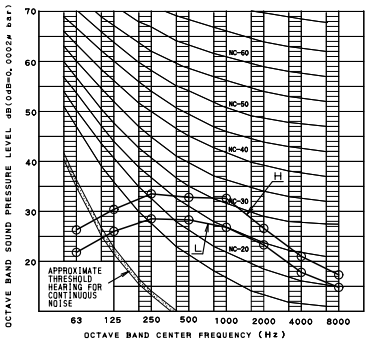

Note:

1. The operating conditions are assumed to be standard (JIS conditions).
2. These operating values were obtained in a dead room (conversion values).
   Sound level will vary depending on a range of factors such as the construction (acoustic absorption coefficient) of the particular room in which the equipments installed.

9. Installation

Installation Example

C : 3PN02401-4Y

Service Space

(1) Select an installation site where the following conditions are fulfilled and that meets your customer's approval.

- In the upper space of the indoor unit where there is no possible dripping of water from the refrigerant pipe, drain pipe, water pipe, etc.
- Where optimum air distribution can be ensured.
- Where nothing blocks air passage.
- Where condensate can be properly drained.
- If supporting structural members are not strong enough to take the unit's weight, the unit could fall out of place and cause serious injury.
- Where the false ceiling is not noticeably on an incline.
- Where there is no risk of flammable gas leakage.
- Where sufficient clearance for maintenance and service can be ensured. **(Refer to Fig. 1)**
  If sufficient clearance could be ensured at*, leave a space of 200 mm or more between the unit and it's surroundings easier maintenance and service.
- Where piping between indoor and outdoor units is possible within the allowable limit. (Refer to the installation manual for the outdoor unit.)

⚠ CAUTION

- Install the indoor and outdoor units, power supply wiring and connecting wires at least 1 meter away from televisions or radios in order to prevent image interference or noise.
  (Depending on the radio waves, a distance of 1 meter may not be sufficient enough to eliminate the noise.)

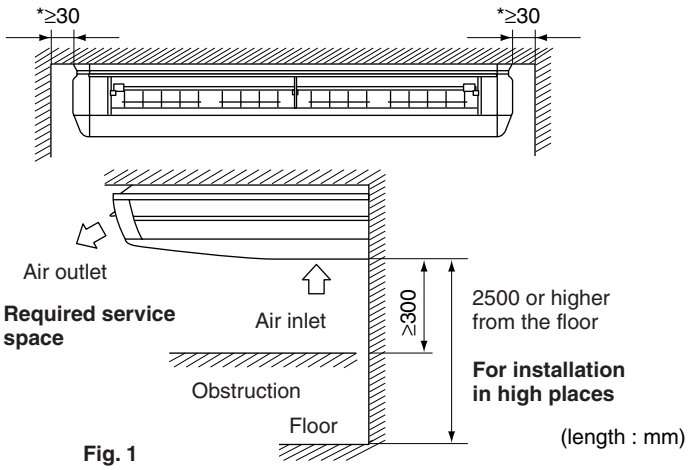

Fig. 1

(2) This indoor unit may be installed on ceilings up to 3.5 m in height. However, if the ceiling is higher than 2.7m, the remote control will have to be set locally. (Refer to "FIELD SETTING")

(3) Use suspension bolts for installation. Check whether the ceiling is strong enough to support the weight of the unit or not. If there is a risk, reinforce the ceiling before installing the unit.
(Installation pitch is marked on the paper pattern for installation. Refer to it to check for points requiring reinforcing.)

C : 3PN01417-7P

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Bolt Pitch

(1) Relative positions of indoor unit, suspension bolt, piping hole, drain piping hole, and electric wire hole position. (Refer to Fig. 2)

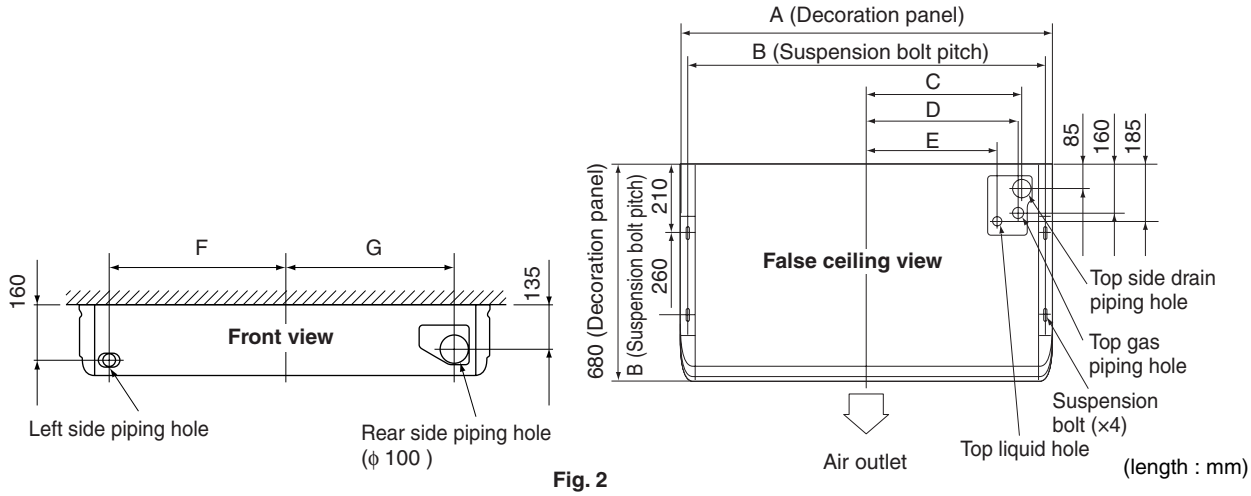

Fig. 2

Model	A	B	C	D	E	F	G
FXHQ32M(A)VE	960	920	390	375	310	400	375
FXHQ63M(A)VE	1160	1120	490	475	410	500	475
FXHQ100M(A)VE	1400	1360	610	595	530	620	595

(2) Make the suspension bolt hole, piping hole, drain piping hole.

- Refer to the paper pattern for installation for hole positions.
- Fix the positions for suspension bolt, piping hole, drain piping hole, and electric wire hole, and make the openings.

C : 3P172532-7

Drain Piping Work

Rig the drain pipe as shown below and take measures against condensation. Improperly rigged piping could lead to leaks and eventually wet furniture and belongings.

(1) Carry out the drain piping.

- For drain work, rig the pipes so that they drain reliably.
- The drain pipe outlet direction can be chosen from the right rear, right, left rear, and left. Refer to “REFRIGERANT PIPING WORK” for right rear and right direction, and refer to Fig. 20 for left rear and left direction.

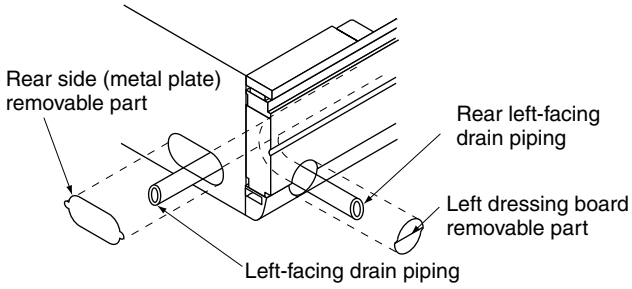

Fig. 20

- For left drain pipe outlet, remove the rubber plug and the insulation on the drain pipe connecting opening on the left side of the unit and change the position to the right side.
- Insert the rubber stopper securely, all the way to the base, in order to prevent water leakage.
- The diameter of the drain pipe should be greater than or equal to the diameter of the connecting pipe. (Vinyl tube ; pipe size : 20 mm ; outer dimension : 26 mm)
- Keep the drain pipe short and sloping downwards at a gradient of at least 1/100 to prevent air pockets from forming. **(Refer to Fig. 21)**
- Use the drain hose (1) and the metal clamp (2).
  Insert the drain hose into the drain socket, up to the gray tape. **(Refer to Fig. 22)**
  Tighten the metal clamp until the screw head is less than 4 mm from the hose. **(Refer to Fig. 23)**
  (Be careful of the installation direction. Install so that the metal clamp does not contact the intake grill.)
- Wrap the sealing pad (8) (accessory) over the clamp and drain hose to insulate. **(Refer to Fig. 23)**
- No folding of drain hose inside the indoor unit. **(Refer to Fig. 24)**
  (If there is slack in the drain hose, it may cause damage to the intake grill.)

C : 3P172532-7

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

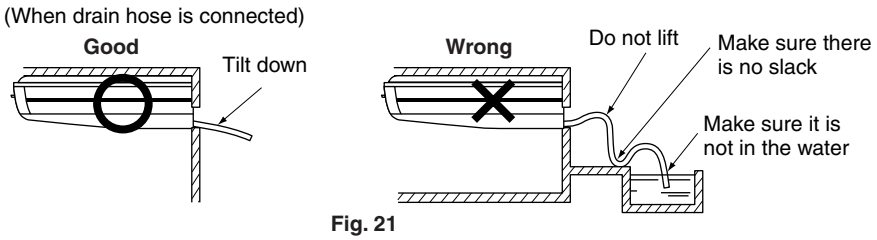

Fig. 21

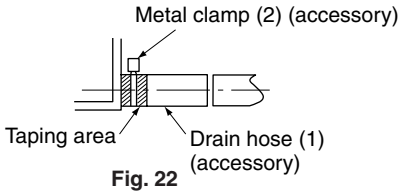

Fig. 22

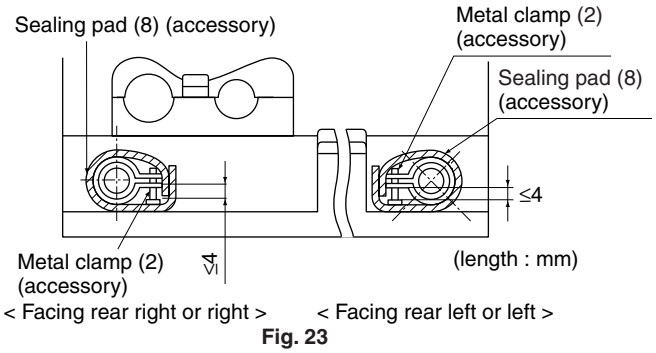

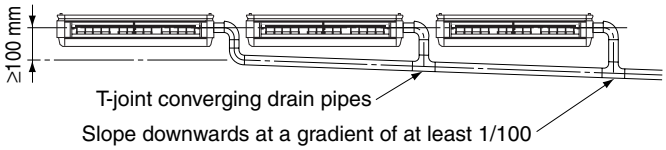

Fig. 23

NOTE

- To ensure no excessive pressure is applied to the included drain hose (1), do not bend or twist when installing. (This may cause leakage.)
- If converging multiple drain pipes, install according to the procedure shown below.

Select converging drain pipes whose gauge is suitable for the operating capacity of the unit.

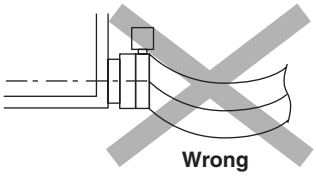

Fig. 24

(2) Confirm that smooth drainage is achieved after the piping work.

- Add 0.6 liter of water in the drain pan from the air outlet for confirming drainage. **(Refer to Fig. 25)**

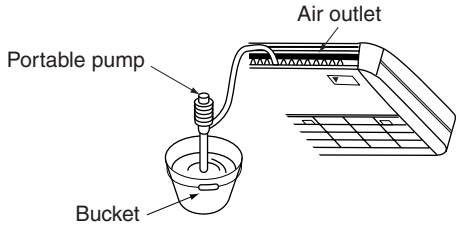

Fig. 25

⚠ CAUTION

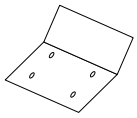

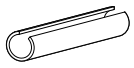

- Drain piping connections
  Do not connect the drain piping directly to sewage pipes that smell of ammonia. The ammonia in the sewage might enter the indoor unit through the drain pipes and corrode the heat exchanger.
- Keep in mind that it will become the cause of getting drain pipe blocked if water collects on drain pipe.

Drain Pump Kit

Specifications

Items \ Model		KDU50M60VE	KDU50M125VE	
Drain-up Lift (mm)		600		
Drain Con. Diameter		VP20 (Ex. dia. ϕ26, Int. dia. ϕ20)		
Pump	Power Supply	Single phase 220-240V/220V 50Hz (from Indoor Unit PC Board)		
	Power Consumption (W)	20/17 (50Hz)		
Applicable Models		32 class	63 class	100 class

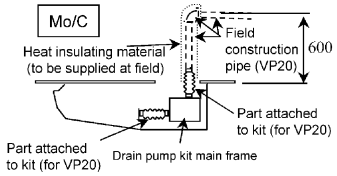

Precaution at use

1. Don't turn off the power within 5 minutes after cooling operation stops.
2. The liquid crystal display blinks to inform us that safety device actuated.
3. When cooling operation's season is over, extract drain water.

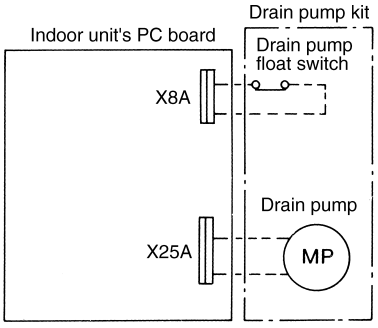

Installation guide of the drain pump kit

<Changes in drain pump kit>

- Exit drain pipe has been changed from VP25 to VP20 (to meet the drain diameter of main frame).
- Attached drain pipe (450 mm chloride vinyl straight pipe bellow, elbow) -> only bellow hose for VP20
- All units of drain up height was unified to 600mm (From the bottom of the ceiling)

Wiring diagram

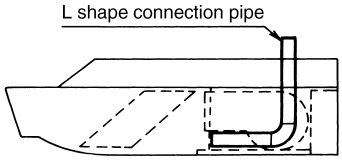

Remove the X8A short circuit connector when the float switch will be connected.

L Shape Connection Pipe Kit

Application purpose

This kit must be bent inside the unit as shown below, when the refrigerant piping is carried out in a ceiling space. This L shape kit is an optional accessory which has been developed for improving the work of the processing on site.

1. Features

External Appearance

- Compact and stylish design that does not detract from the decor of the room.
- More compact than compared with previous model. (50, 63 class)

  - Drastic 10 kg weight reduction from 24 kg to 14 kg.
  - Volume reduced by 22%.
  - Space savings of up to 47%.
- Low operating sound

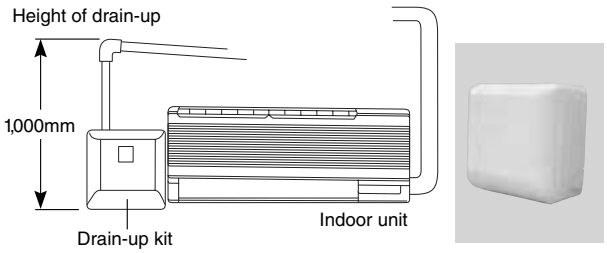

(220V-240V)(dB(A))

Class	20	25	32	40	50	63
Operating sound (H/L)	35/29	36/29	37/29	39/34	42/36	46/39

- Drain pan and air filter can be kept clean by mildew-proof polystyrene.
- Washable grille, the front grille can be easily removed for washing.
- Auto-swing ensures efficiency of air distribution. The louver closes automatically when the unit stops.
- 5 steps of discharge angle can be set by remote controller.
- Discharge angle is automatically set at the same angle as the previous operation when restarts. (Initial setting; 10˚ for cooling and 70˚ for heating)

- Drain-pump kit is available as optional accessory, which lifts the drain 1,000mm from the bottom of the unit.
- Flexible installation.
  - Drain pipe can be fitted to from either left or right sides.

Clamps. Screws.
Drawing No.			C : 3D039370B		

Note:

∗1 Indoor temp. : 27°CDB, 19.5°CWB / outdoor temp : 35°CDB / Equivalent piping length : 7.5 m, level difference : 0 m.
∗2 Indoor temp. : 27°CDB, 19.0°CWB / outdoor temp : 35°CDB / Equivalent piping length : 7.5 m, level difference : 0 m.
3 Capacities are net, including a deduction for cooling (an addition for heating) for indoor fan motor heat.
∗4 Anechoic chamber conversion value, measured at a point 1 m in front of the unit and 1 m downward. During actual operation, these values are normally somewhat higher as a result of ambient conditions.
5 Refer to page 340 for Fan Motor Input.

3. Dimensions

FXAQ20MA
FXAQ25MA
FXAQ32MA

Unit (mm)

3D034903C

No.	Name	Description
9	Left side pipe connection hole	
8	Right side pipe connection hole	
7	Grounding terminal	M4
6	Drain hose	VP13 (External dia. ϕ18)
5	Liquid pipe	ϕ6.4 Flare connection
4	Gas pipe	ϕ12.7 Flare connection
3	Air outlet	
2	Front grill	
1	Front panel	

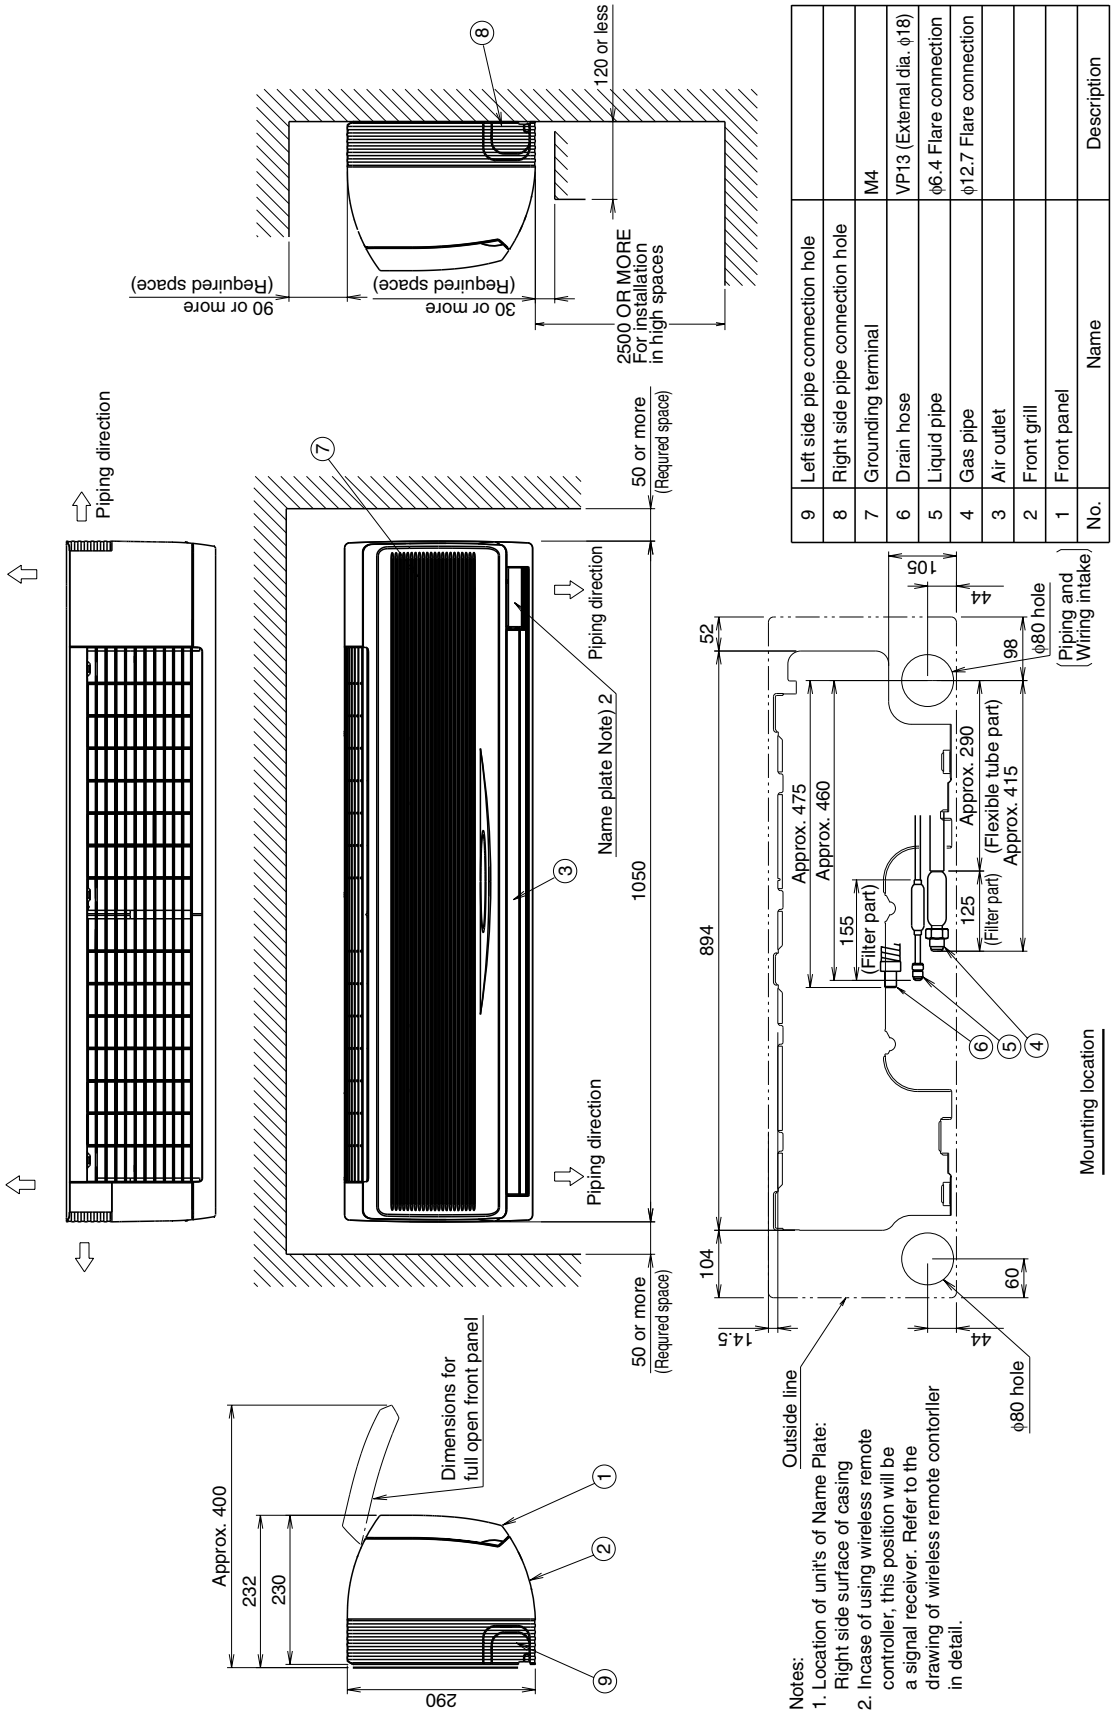

Notes:
1. Location of unit's of Name Plate:
   Right side surface of casing
2. In case of using wireless remote controller, this position will be a signal receiver. Refer to the drawing of wireless remote contoriler in detail.

6. Electric Characteristics

Units					Power supply		IFM		Input(W)	
Model	Type	Hz	Volts	Voltage range	MCA	MFA	kW	FLA	Cooling	Heating
FXAQ20MA	VE	50	220-240	MAX. 264 Min. 198	0.3	15	0.040	0.2	16	24
FXAQ25MA					0.4	15	0.040	0.3	22	27
FXAQ32MA					0.4	15	0.040	0.3	27	32
FXAQ40MA	VE				0.4	15	0.043	0.3	20	20
FXAQ50MA					0.4	15	0.043	0.3	27	32
FXAQ63MA					0.6	15	0.043	0.5	50	60

Symbols:
- MCA : Min. Circuit Amps (A)
- MFA : Max. Fuse Amps (See note 5)
- kW : Fan Motor Rated Output(kW)
- FLA : Full Load Amps(A)
- IFM : Indoor Fan Motor

Note:
1. Voltage range
   Units are suitable for use on electrical systems where voltage supplied to unit terminals is not below or above listed range limits.
2. Maximum allowable voltage unbalance between phases is 2%.
3. MCA/MFA
   MCA = 1.25 X FLA
   MFA ≦ 4 X FLA
   (Next lower standard fuse rating. Min. 15A)
4. Select wire size based on the MCA.
5. Instead of fuse, use Circuit Breaker.

8. Sound Levels

Overall

■ **Wall Mounted Type**

4D037087D

Note:
1. The operating conditions are assumed to be standard (JIS conditions).
2. These operating values were obtained in a dead room (conversion values).
   Sound level will vary depending on a range of factors such as the construction (acoustic absorption coefficient) of the particular room in which the equipments installed.

Service Space

(1) Select an installation site where the following conditions are fulfilled and that meets with your customer's approval.

- In the upper space (including the back of the ceiling) of the indoor unit where there is no possible dripping of water from the refrigerant pipe, drain pipe, water pipe, etc.
- Where the wall is strong enough to bear the indoor unit weight.
- Where sufficient clearance for installation and maintenance can be ensured. **(Refer to Fig. 1 and Fig. 2)**
- Where optimum air distribution can be ensured.
- Where nothing blocks the air passage.
- Where condensate can be properly drained.
- Where the wall is not significantly tilted.
- Where not exposed to combustible gases.
- Where pipe between indoor and outdoor units is possible within the allowable limit. (Refer to the installation manual of the outdoor unit.)
- Install the indoor and outdoor units, power cable and transmission wiring, at least 1 m from TVs and radios, to prevent distorted pictures and static. (Depending on the type and source of the electrical waves, static may be heard even when more than 1 m away.)
- Install the indoor unit no less than 2.5 m above the floor. Where unavoidably lower, take what measures are necessary to keep hands out of the air inlet.
- Where the cool (warm) air reaches all across the room.

[Space required for installation (mm)]

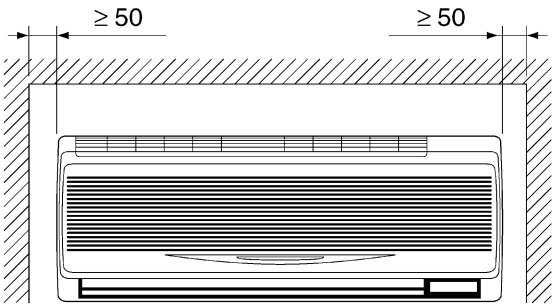

Fig. 1

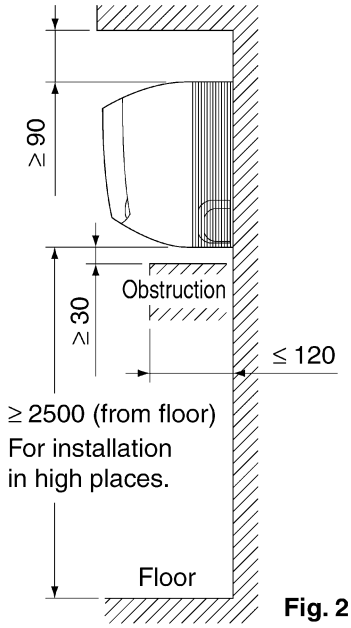

Fig. 2

(2) Consider whether the place where the unit will be installed can support the full weight of the unit, and reinforce it with boards and beams, etc. if needed before proceeding with the installation. Also, reinforce the place to prevent vibration and noise before installing. (The installation pitch can be found on the paper pattern for installation (3), so refer to it when considering the necessity for reinforcing the location.)

(3) The indoor unit may not be directly installed on the wall. Use the attached installation panel (1) before installing the unit.

C : 3P156215-6D

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Installation

(1) Open the piping through-hole.

- The refrigerant pipe and drain pipe can be passed out in one of 6 directions: left, bottom-left, back-left, right, bottom-right, and back-right. **(Refer to Fig. 3)**
- Using the paper pattern for installation (3), choose where to pass the piping out and open a through-hole (ϕ80) in the wall.
  Open the hole so that there is a downward slope for the drain piping. (See "DRAIN PIPING WORK")

(2) Remove the installation panel (1) from the unit and attach to the wall.

(The installation panel is temporarily attached to the unit with screw. (In case of 20-32 type))
(Refer to Fig. 3)

(a) Check the location for the hole using the included paper pattern for installation (3).
- Choose a location so that there is at least a 90 mm gap between the ceiling and the main unit.

(b) Temporarily attach the installation panel (1) at the temporary-securing position on the paper pattern for installation (3) and use a level to make sure the drain hose is either level or tilted slightly downward.

(c) Secure the installation panel (1) to the wall using either screws or bolts.
- If using the attachment screws for the installation panel (2), attach using at least 4 screws on either side (for a total of 8 screws (20-32 type), 9 screws (40-63 type)) of the recommended installation cleat position on the included paper pattern for installation (3).
- If using bolts, attach using a M8 - M10 bolt (for a total of 2 bolts) on either side.
- If dealing with concrete, use commercially available foundation bolts (M8 - M10).

(3) If using the left, bottom-left, right, or bottom-right positions for the piping, cut out the through-hole for the piping in the front grill. (Refer to Fig. 4)

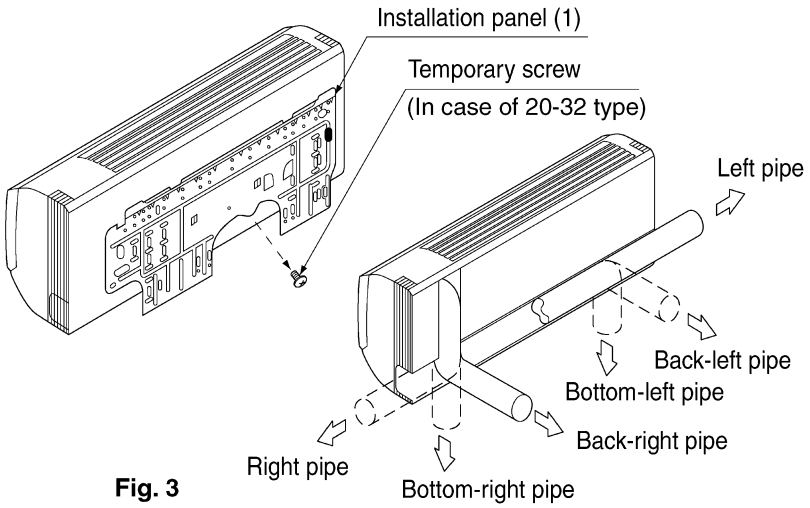

Fig. 3

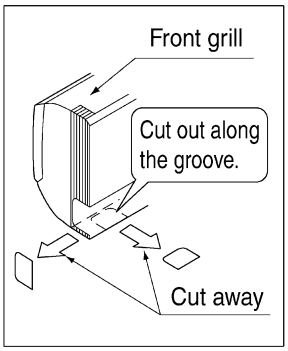

Fig. 4

(4) Remove the front panel and the service lid. (Refer to Fig. 5)

< How to remove the front panel and service lid >

(1) Open the front panel to the point where it stops.

(2) Push the axes on either side of the front panel towards the center of the main unit and remove. (You can also remove it by sliding the front panel either to the left or right and pulling it forward.)

(3) Remove the screw from the service lid and pull the handle forward.

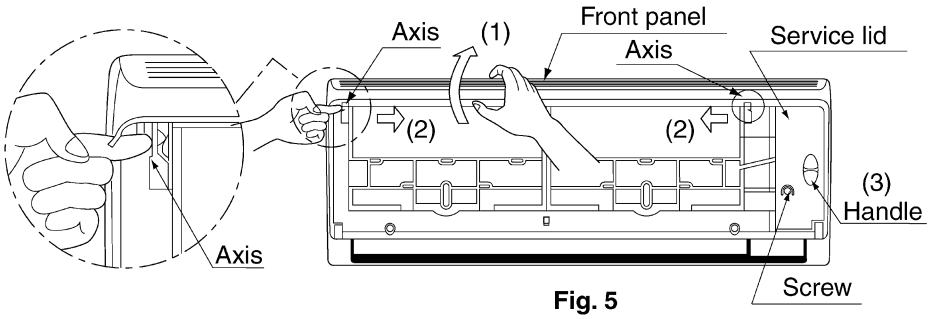

Fig. 5

C : 3P156215-6D

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

(5) Point the pipe in the direction it will be passed out.

For right, bottom-right, and back-right piping (Refer to Fig. 6)

- Wrap the drain hose and the refrigerant piping together with the insulating tape (4) so that the drain hose is below the refrigerant piping.

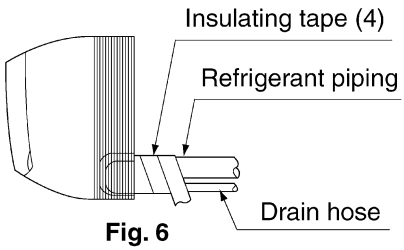

Fig. 6

For left, bottom-left, and left-back piping

- Remove the front grill. **(Refer to Fig. 7)**

< How to remove the front grill >

Remove the front grill as described below when securing the indoor unit with screws or when attaching Optional Accessories (wireless remote controller, adapter PC board, etc.).

(1) Remove the front panel.

(2) Remove the screws (2 places in case of FXA(Q)20,25,32 type/3 places in case of FXA(Q)40,50,63 type) securing the front grill.

(3) Remove the tabs (3 places) securing the front grill by pushing them in the direction of the arrows.

(4) Making sure not to catch the horizontal flaps, remove the front grill by pulling in the direction of the arrow.

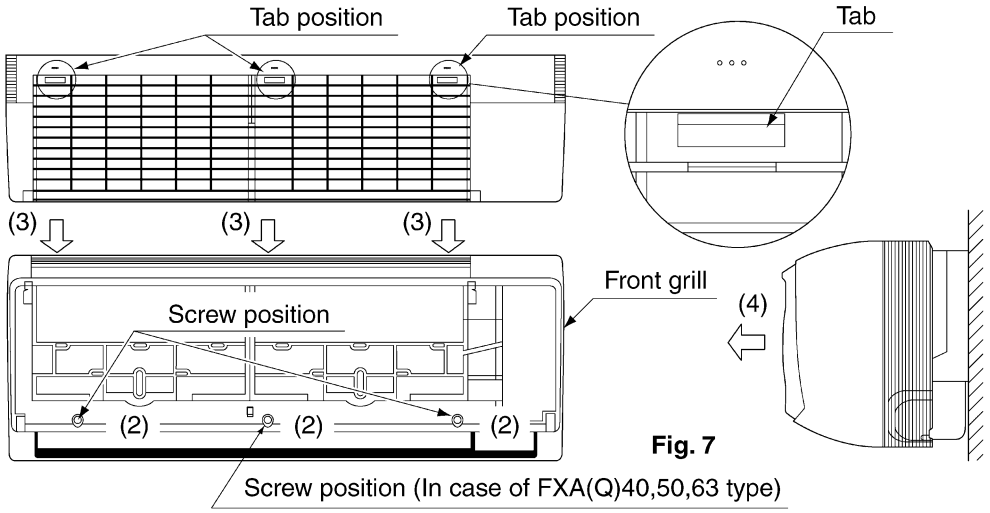

Fig. 7

- Remove the drain plug, the insulation tubing, and the drain hose from the drain pan and replace. **(Refer to Fig. 8)**
- Connect the local refrigerant piping ahead of time, matching it to the liquid pipe and gas pipe marks engraved on the installation panel (1).

< Replacing the drain hose and drain plug >

(1) Remove the drain plug and insulation tubing.
(2) Remove the drain hose and replace onto the left side.
(3) Replace the drain plug and the insulation tubing onto the right side.

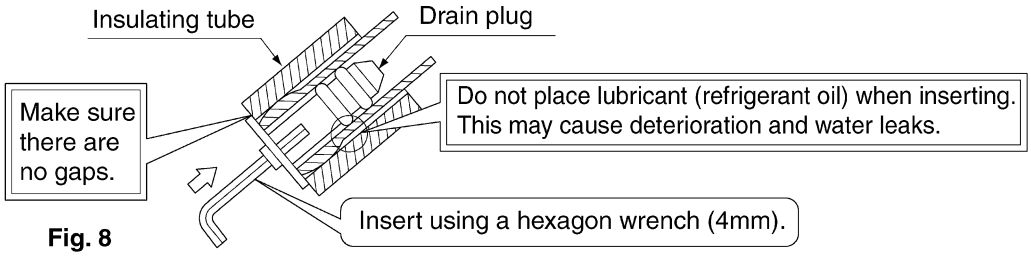

Fig. 8

C : 3P156215-6D

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

(6) Hook the indoor unit onto the installation panel. (Refer to Fig. 9)

• Placing buffering material between the wall and the indoor unit at this time will make work easier.

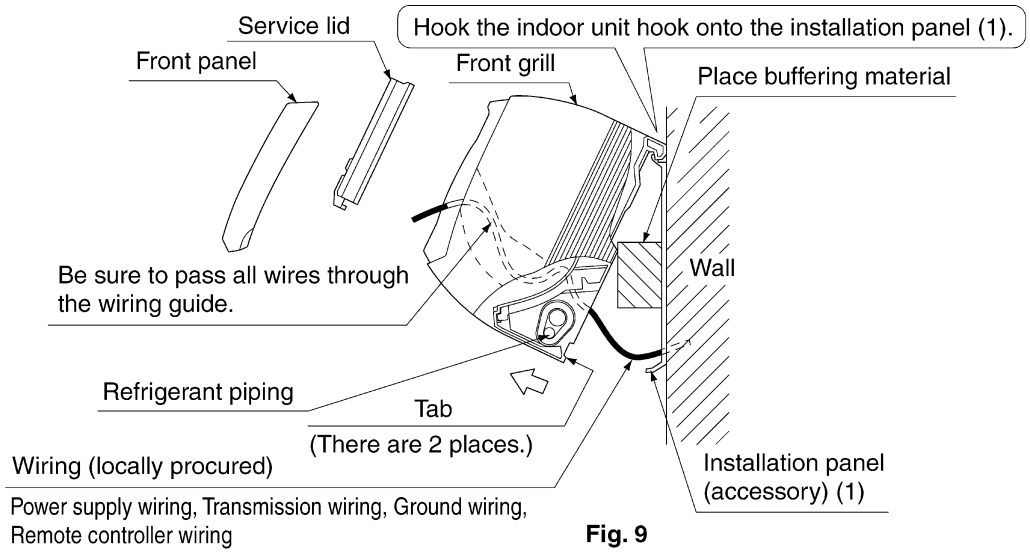

Fig. 9

For right, bottom-right, and back-right piping

• Pass the drain hose and the refrigerant piping to the wall.

(7) Pass power supply wiring, transmission wiring, ground wiring, and remote controller wiring through the wiring guide in through the back of the indoor unit and to the front.

(8) Connect the piping. (See Fig. 10)

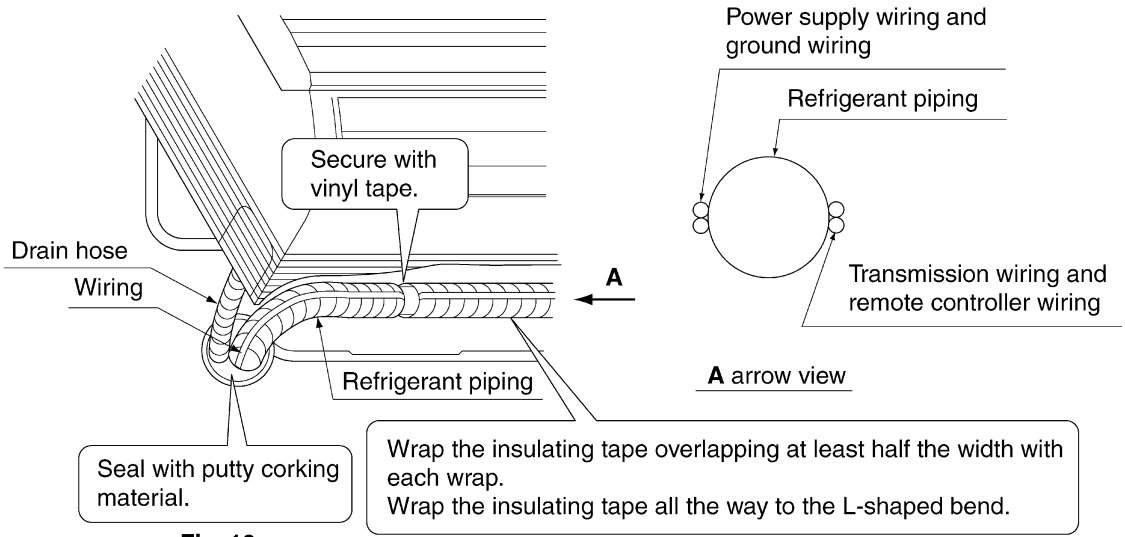

Fig. 10

• To avoid the influence of noise from the power supply line on the transmission wiring and the remote controller wiring, these wirings must be kept as far as possible from the power/ground wirings. As shown in the figure, keep the power supply wiring and the ground wiring together. Keep the transmission and remote controller wirings together and route them maintaining a good distance from the power supply/ground wirings (that is, on the other side of the power supply/ground wirings). Then, fix them securely on the refrigerant pipe.

• Seal the piping through-hole with putty corking material.

(9) Push on both bottom edges of the indoor unit using both hands and hook the tab on the back of the indoor unit onto the installation panel (1). (Refer to Fig. 9)

• At this time remove the buffering material placed in step (6).

C : 3P156215-6D

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

- Make sure power supply wiring, transmission wiring, ground wiring and remote controller wiring are not caught inside the indoor unit.

■ **When screwing in the indoor unit**

- Remove the front grill. **(Refer to Fig. 7)**
- Secure the indoor unit to the installation panel (1) with the securing screws (6). **(Refer to Fig. 11)**

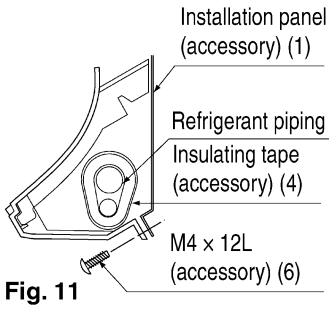

Fig. 11

C : 3P156215-6D

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Drain Piping Work

(1) Install the drain piping. (Refer to Fig. 16)

- The drain pipe should be short with a downward slope and should prevent air pockets from forming.
- Watch out for the points in the figure 16 when performing drain work.

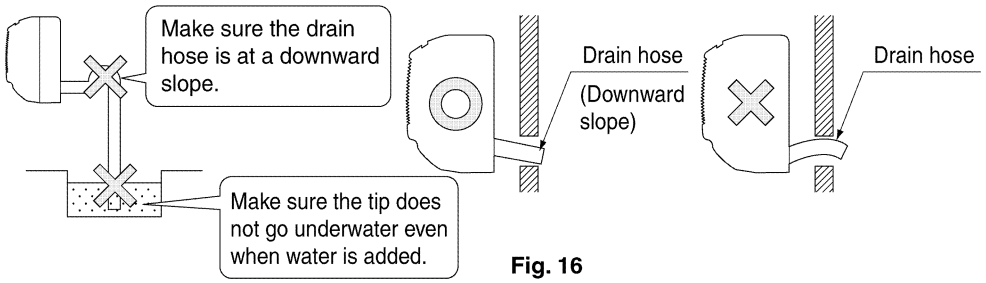

Fig. 16

- When extending the drain hose, use a commercially available drain extension hose, and be sure to insulate the extended section of the drain hose which is indoors. **(Refer to Fig. 17)**

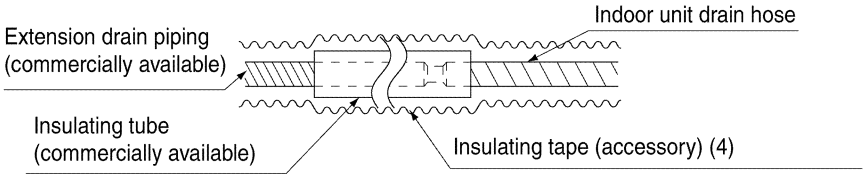

Fig. 17

- Make sure the diameter of the piping is the same as the piping (hard vinyl chloride, nominal diameter 13mm) or bigger.
- When directly connecting a hard vinyl chloride pipe joint (nominal diameter 13mm) to the drain hose connected to the indoor unit (i.e. for embedded piping, etc.), use a commercially available hard vinyl chloride pipe joint (nominal diameter 13mm). **(Refer to Fig. 18)**

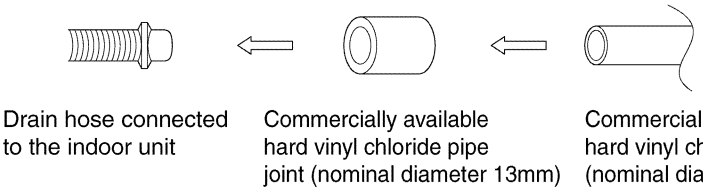

Fig. 18

(2) Make sure the drain works properly.

- After drain work is complete, perform a drain check by opening the front panel, **removing the air filter**, pouring water into the drain pan, and making sure water flows smoothly out of the drain hose. **(Refer to Fig. 19)**

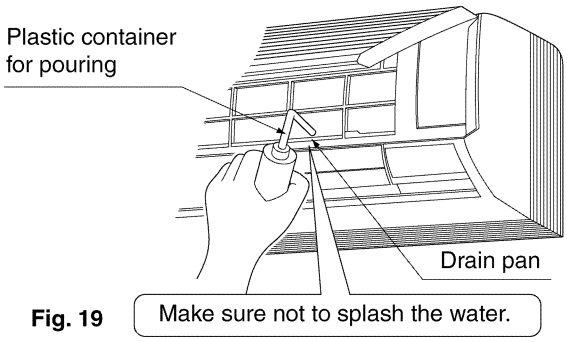

Fig. 19

⚠ CAUTION

Drain piping connections

Do not connect the drain piping directly to sewage pipes that smell of ammonia. The ammonia in the sewage might enter the indoor unit through the drain pipes and corrode the heat exchanger.

Keep in mind that it will become the cause of getting drain pipe blocked if water collects on drain pipe.

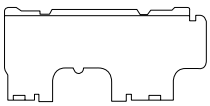

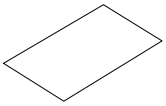

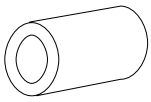

C : 3P156215-6D

1	Drain pump kit	K-KDU572EVE					

Optional Accessories (For Controls) : Refer to P.645

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Drain Pump Kit — K-KDU572EVE (Supplying goods to order)

Operating sound as small as 25dB

Features

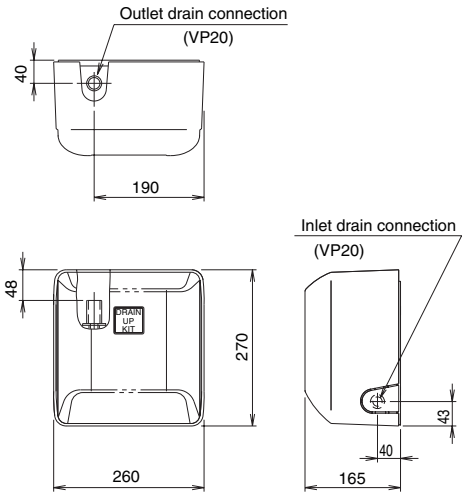

1. Silent operation with no sign of pump operation
2. Design matching with wall mounted type air conditioner
3. Can be interlocked with air conditioner.

Usage

- **Home, office, and store**
- **Optimum for redesign**

Caution :
- Drain pump kit is only for the air conditioner. Please use it for the drain treatment of the air conditioner.
- Be sure to lay the piping inclined down after drain-up, which is different from drain pump.
- Please do not use it in the place where soot such as kitchens is shrouded and the place where an organic solvent drifts.

Dimensions Unit : mm

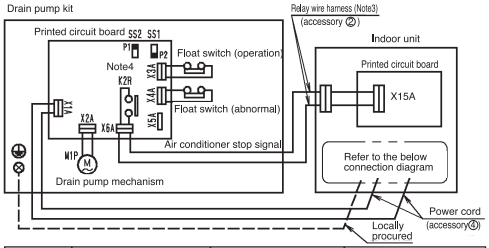

Specification

	K-KDU572EVE
Drain pump head (mm) (Note 1)	1,000
Power supply	Single phase 220-240V/220V, 50/60Hz
Power consumption	14.1/12.9 (W)
Operating current	0.18/0.16 (A)
Insulation	Class E
Drain inlet connection pipe diameter	VP20 (Note 2)
Drain exit connection pipe diameter	VP20
Safety device	Float switch
Operating sound (dB)	25
Machine weight (Mass)(kg)	3.2
Drain exhaust flow rate (ml/min)	400

Note : 1. Height from bottom of drain pump kit up to the drain pipe.
2. Connect to the VP13 using the soft reducing socket.

Wiring Diagram

Application model	FAY71LVE FAYP71LV1	FXA20·25·32LVE(C) FXA40·50·63LVE FXAQ20·25·32MVE FXAQ40·50·63MVE	FAQ71BUV1B
Connection diagram	X2M Tes2 ⏚ 1 2 3	X2M ⏚ L N	X2M ⏚ 1 2 3

The earth wire (copper) should be at least 2.0mm² or ϕ 1.6mm.
When the relay wire harness is connected, remove the X15A short-circuit connector.

Note : 1. Don't forget to turn on the power. If it is not turned on, the air conditioner will perform an error stop and operation will not be possible.
2. Make sure that slide switch SS1 on the drain pump kit printed circuit board assembly is set to P2 and slide switch SS2 is set to P1.
3. The relay wire harness cannot be extended.
4. Turning on the power will close the K2R connector, making is a non-volt B connector.

						Installation manual	⑲	1

Note 3: This pipe must be procured locally for the large capacity machine.

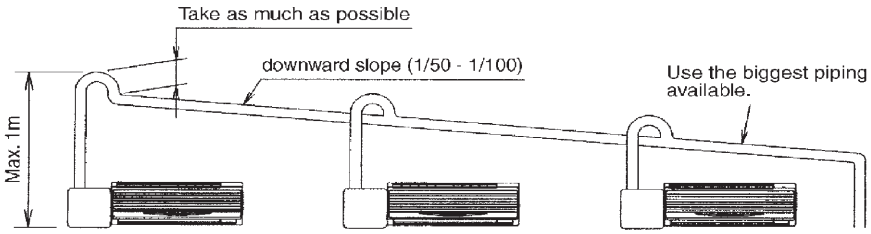

External drawing of drain pump kit and Service space

The drain pump kit can be installed to the left or the right of the air conditioner.
The diagram below illustrates a left installation.

When using centralized piping

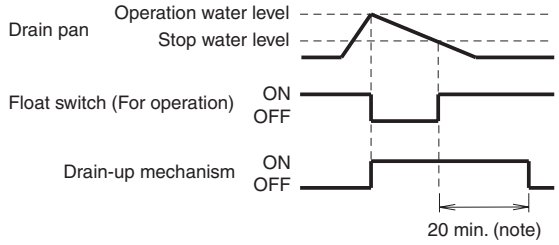

- Follow the figure below to make sure there is absolutely no back-up when using centralized piping.

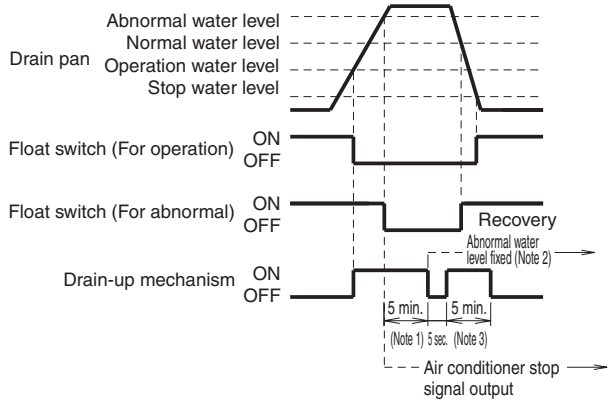

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Description of operation

1: Operation at normal water level (Air conditioner operates when water level is at operation level, and when water level is at stop level, residual operation is performed.)

2: Operation at abnormal water level
(When water level is abnormal, the air conditioner stops. When abnormal water level is kept five minutes or longer, abnormal water level is established, and residual operation is performed.)

Note 1) When the float switch (for abnormal water level) is reset within five minutes, the air conditioner operates again with “normal water level”.
Note 2) When abnormal water level is fixed, power must be turned on again for operating again.
Note 3) When the cycle of operation 5 minutes - stop 5 seconds - operation 5 minutes is finished, if the float switch (for abnormal water level) is not reset, keep operation of drain pump until the switch is reset.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

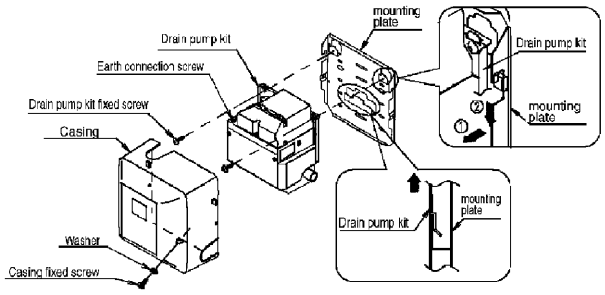

1 Pre-installation preparations

● See the indoor unit's installation manual for indoor unit work.

Drain pump kit preparations

● Remove the casing and the drain pump kit from the mounting plate.

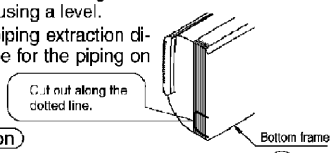

1. Remove the casing fixed screw and pull the casing down and forward.
2. Remove 2 Screws of the drain pump kit and lift the drain pump kit out.

2 Indoor unit preparations

● Make sure the indoor unit is installed first.

1. Attaching of the indoor unit mounting plate
   After installing the mounting plate following the directions in the indoor unit, make sure it is plainness using a level.
2. Decide the left and the right piping extraction direction and cut off the exit hole for the piping on the bottom frame by the cutter etc.
3. Connecting the drain hose

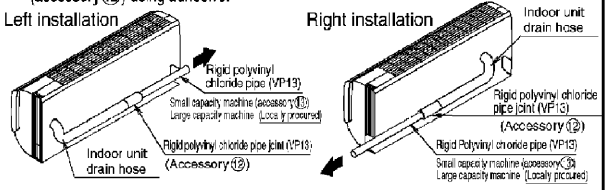

In the case of a left installation

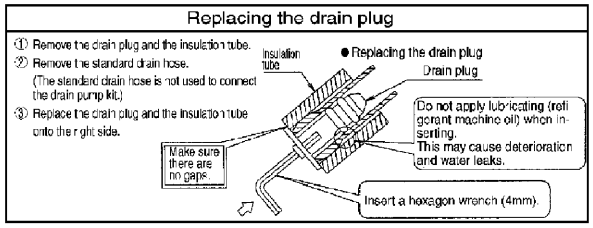

1. Connect the rigid polyvinyl chloride pipe joint (accessory ⑫) to the indoor unit drain hose using adhesive.
2. Connect the rigid polyvinyl chloride pipe (accessory ⑬ for small capacity machine. Local procurement for the large capacity) to the rigid polyvinyl chloride pipe joint (accessory ⑫) using adhesive.

In the case of a right installation

1. Remove the drain hose connected to the indoor unit and replace with a drain plug and insulation tube.
2. The drain hose removed from the indoor unit is attached to left side.
3. Connect the rigid polyvinyl chloride pipe joint (accessory ⑫) to the indoor unit drain hose using adhesive.
4. Connect the rigid polyvinyl chloride pipe (accessory ⑬ for small capacity machine. Local procurement for the large capacity) to the rigid polyvinyl chloride pipe joint (accessory ⑫) using adhesive.

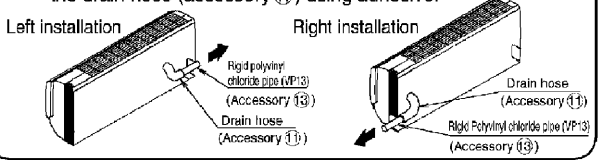

Replacing the drain plug

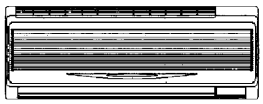

When using the drain hose (accessory ⑪)

① Remove the indoor unit drain hose and attach the drain hose (accessory ⑪).
② Connect the rigid polyvinyl chloride pipe (accessory ⑬) to the drain hose (accessory ⑪) using adhesive.

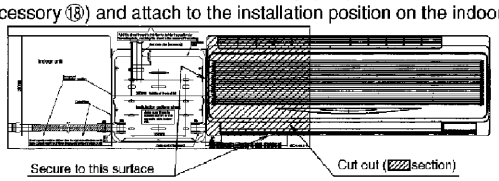

3 Installing the mounting plate

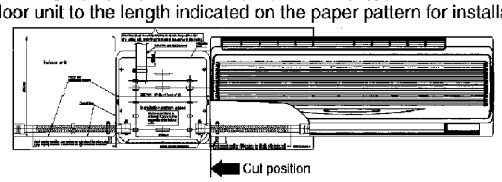

1. Install the indoor unit.

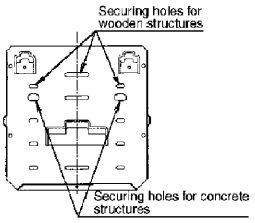

2. Cut out the indoor unit section from the paper pattern for installation (accessory ⑱) and attach to the installation position on the indoor unit.

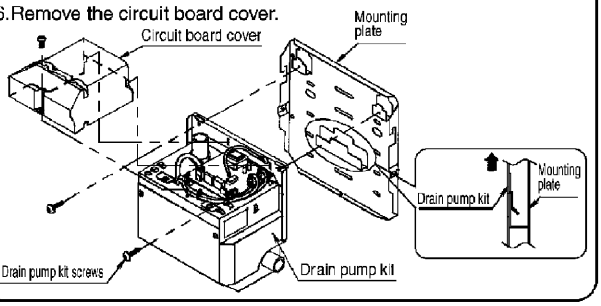

3. Cut the rigid polyvinyl chloride pipe (accessory ⑬) attached to the indoor unit to the length indicated on the paper pattern for installation.

4. Determine the position to secure the mounting plate for the drain pump kit by matching to the paper pattern for installation. Remove the paper pattern for install once this is done.
   - If using screws (accessory ⑯), fix it at least 4 positions.
   - For concrete, attach it using commercially available anchors (M8) and bolts.

5. Attach the drain pump kit to the mounting plate and squeeze in the fixed screws.
6. Remove the circuit board cover.

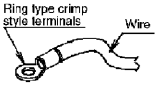

4 Attaching the relay wire harness, the connection harness, and the power cord.

⚠Caution Only connect after shutting off the power.

< Precautions when laying power and earth wiring >

Use ring type crimp style terminals for connections to the inter-unit wiring terminal block and the earth wiring. When none are available, follow the instructions below.

- Do not connect wiring of different thicknesses to the inter-unit wiring terminal block. (Looseness in the terminal may cause abnormal heat.)
- For wiring, use the designated power wire and connect firmly, then secure to prevent outside pressure being exerted on the terminal board.
- Use an appropriate screwdriver for tightening the terminal screws. A screwdriver with a small head will strip the head and make proper tightening impossible.
- Over-tightening the terminal screws may break them.
- See the table at right for tightening torque for the terminal screws.

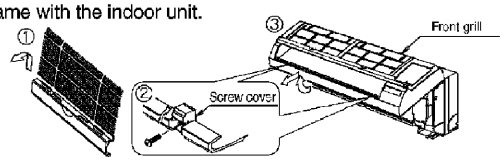

Tightening torque(N·m)	
Inter-unit wiring terminal block	1.18 – 1.44
earth terminal	1.44 – 1.94

For the FXYA71LV, FAYP71LV1, FXA20·25·32LVE(C)
FXYA40·50·63LVE, FXAQ20·25·32·40·50·63MVE

- Connect the relay wire harness (accessory ②) and the power cord (accessory ④) to the indoor unit.

1. Remove the front grill according to the instruction manual that came with the indoor unit.

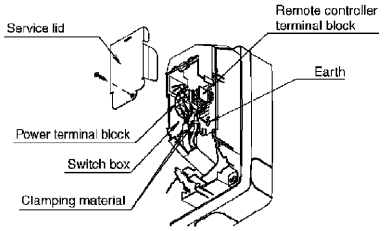

3K019617

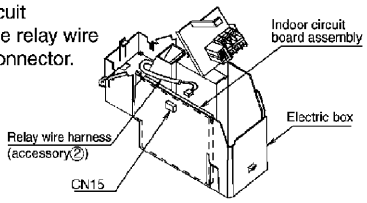

10

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2. Remove the service lid.

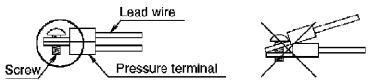

3. Remove the indoor circuit board assembly CN15 short-circuit connector and connect the relay wire harness (accessory②) connector.

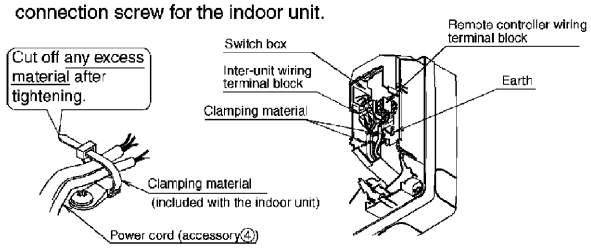

4. Connect the power cord (accessory④) to the indoor unit inter-unit wiring terminal block.

● When connecting the terminal to the inter-unit wiring terminal block, make sure it is attached properly, as shown below.
If the pressure terminals are mistakenly attached in the same direction, the surface of the terminal that is touching will be reduced, causing heat and perhaps burn damage.

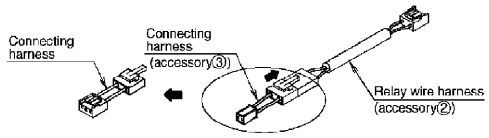

5. Connect the earth wire (locally procured-copper wire at least 2mm²) between the unit and the drain up kit with the earth connection screw for the indoor unit.

For the FAQ71BUV1B

● Connect the relay wire harness (accessory②), the connecting harness (accessory③) , and the power cord (accessory④) to the indoor unit.

1. Remove the connecting harness on the relay wire harness (accessory②) and connect the included connecting harness (accessory③).

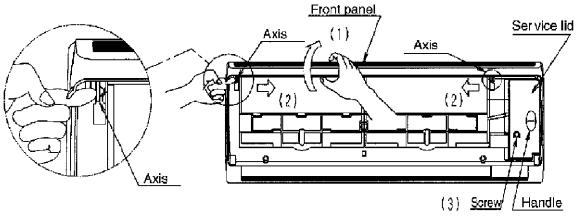

2. How to remove a front panel and the service lid according to the indoor unit installation manual.

[Removing the front panel and service lid]

(1) Open the front panel as far as it stops.

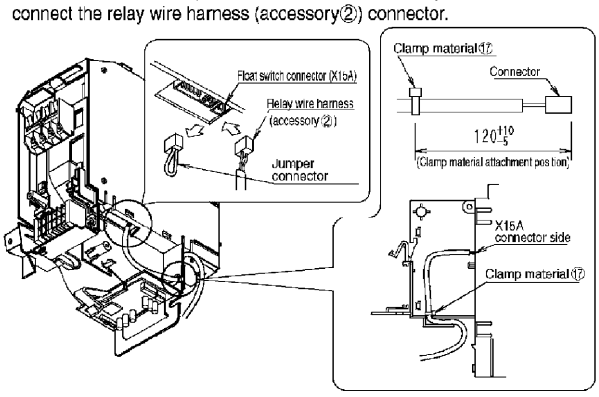

(2) Push the axes on either side of the front panel towards the center of the main unit and remove.
(You can also remove it by sliding the front panel either to the left or right and pulling it forward.)

(3) Remove the screws from the service lid and pull the handle forward.

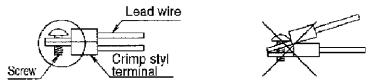

3K019617

3. Remove the indoor unit printed circuit board X15A Jumper connector and connect the relay wire harness (accessory②) connector.

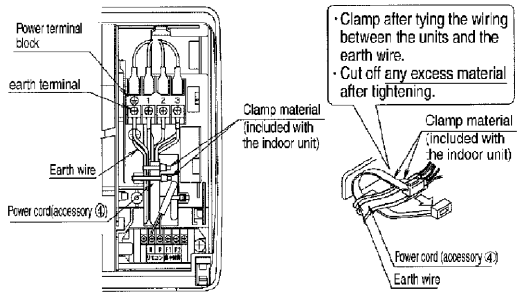

4. Connect the power cord (accessory④) to the indoor unit inter-unit wiring terminal block.

● When connecting the terminal to the inter-unit wiring terminal block, make sure it is attached properly, as shown below. If the crimp styl terminals are mistakenly attached in the same direction, the surface of the terminal that is touching will be reduced, causing heat and perhaps burn damage.

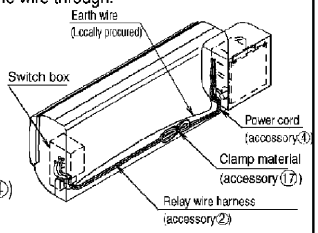

5. Connect the earth wire (locally procured - copper wire at least 2mm²) between the indoor unit and the drain pump kit with the ground connection screw for the ndoor unit.
Be sure to perform earthing. Make sure the earthing resistance is below 100 ohms.

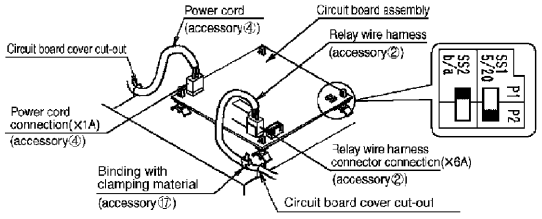

⑤ Passing the wire through

1. See the figure below for how to pass the wire through.
The relay wire harness, power cord and earth wire should be matched to the space inside the indoor unit.

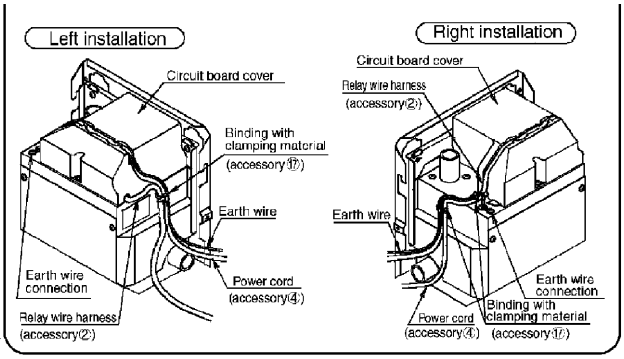

2. Connect the relay wire harness (accessory ②) to the drain pump kit circuit board assembly connector (X6A).
3. Connect the power cord (accessory ④) to the drain pump kit circuit board assembly connector (X1A).
4. Secure the earth wire (locally procured-copper wire at least 2mm²) to the drain pump kit using the earth connection screw.
5. Tighten the relay wire harness (accessory ②) using the clamping material.
6. Make sure that slide switch SS1 on the drain pump kit printed circuit board is set to P2 and slide switch SS2 is set to P1.
7. Attach the circuit board cover.
8. Tighten the relay wire harness (accessory ②), power cord (accessory④), and earth wire (locally procured) using the clamping material.
9. Bundle excess relay wire harness (accessory ②) using the clamping material (accessory⑰) and store away.
10. Connect the earth wire.

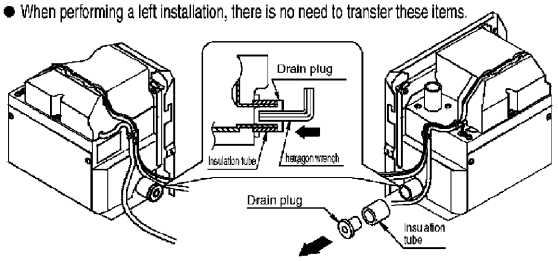

3K019618

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

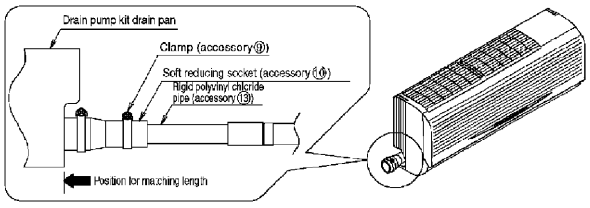

6 Installing the drain pump kit and drain piping.

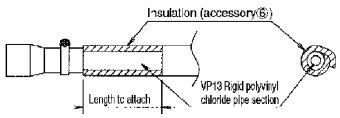

1. When installing the drain pump kit to the right, transfer the drain plug and the insulating tubing from the left to the right.
   - When performing a left installation, there is no need to transfer these items.

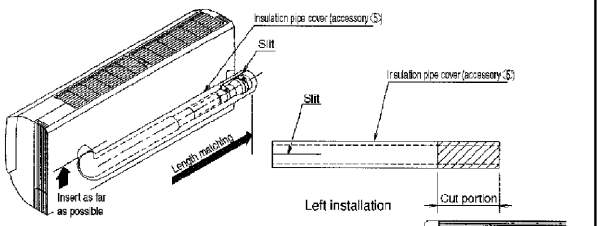

2. Insert the clamp (accessory ⑨) and the soft reducing socket (accessory ⑩) into the indoor unit the rigid polyvinyl chloride pipe (accessory ⑬), then match the position and tighten up the clamp to match the length of the drain pump kit drain pan socket.

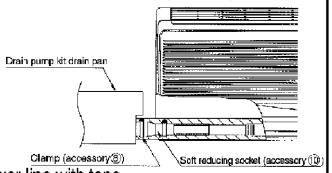

3. Matching the dimensions of the area required, cut the right length of insulation (accessory ⑥) for the drain hose rigid polyvinyl chloride pipe section and attach.

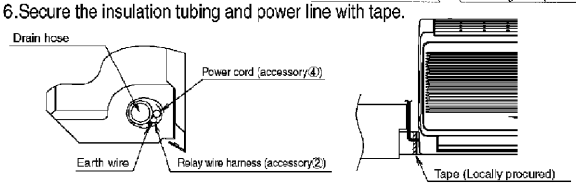

4. Insert the insulation pipe cover (accessory ⑤) as far into the drain hose as it can go.
   - There is a slit in one side of the insulation pipe cover. Position the slit side to the drain pump kit.
   - Cut the insulation pipe cover to match the length of the drain hose.

5. Insert the clamp (accessory ⑧) and the soft reducing socket (accessory ⑩) into the drain pump kit drain socket and tighten it.

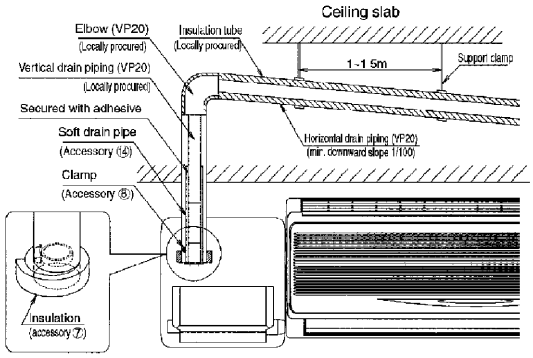

6. Secure the insulation tubing and power line with tape.

7. Connect the exit pipe.
   - Be sure to use adhesive to connect the soft drain pipe (accessory ⑭) and the ceiling-side locally-procured the drain pipe.
   - Connections on the drain pump kit should be secured with a clamp (accessory ⑧) and wrapped with insulation (accessory ⑦).

⚠Caution
- Exit piping parts must be procured locally.
- Be sure to insulate the drain piping.
- Give the horizontal sections on the drain piping a downward slope of at least 1/100 and make sure no air bubbles accumulate.
- Secure long horizontal sections with support clamps to prevent them from shaking.

7 Test run

- Make sure the pump is running and water is draining.
- Make sure there are no leaks from the drain pipes when draining.

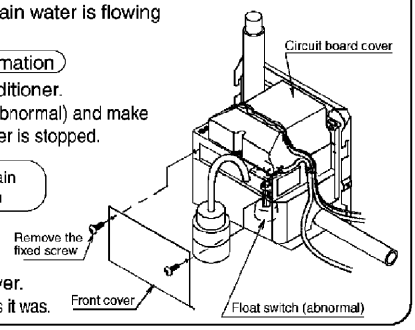

⚠Caution
- Before the work confirm the power off.
- After replacing the circuit board cover to its original location, turn on the power.

1. Remove the front cover on the drain pump kit and fill the drain pan halfway with water.
2. Turn on the power and make sure that the drain pump is working properly and the drain water is flowing smoothly.

Abnormal-stop confirmation

1. Turn on the air conditioner.
2. Lift the float switch (abnormal) and make sure the air conditioner is stopped.

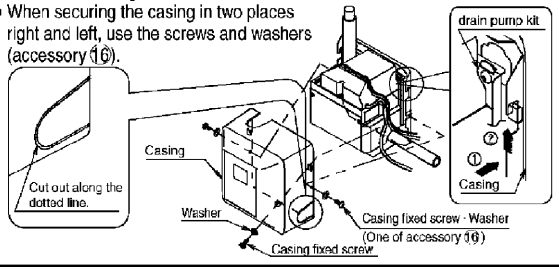

⚠Caution Do not get the drain pump mechanism

- After checking, replace the front cover.
- Rebuild the indoor unit as it was.

8 Attaching the casing

- Cut out the piping exit hole from the casing.
- Secure the casing with the installation screws and washers as described below.
- When securing the casing in two places right and left, use the screws and washers (accessory ⑯).

3K019618

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

9 Checks after completion

You should re-check the following after completion of work.

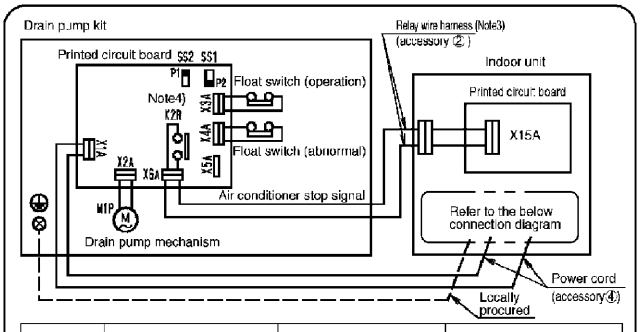

Items to be checked	Check column
Are the indoor unit and drain pomp kit level?	
Is the drain piping properly connected? Is there any possibility of developing water leaks?	
Is the drain piping run on a downhill grade?(1/50~1/100)	
Is the drain hose properly insulated?	
Is the equipment wired correctly?	

After test running the air conditioner, use the operating in cooling and check the operating sound of the drain pump kit.

10 Cautions during operation

- The pump repeats an operation stop with the float switch for operation during airconditioning operation.
- After cooling is stopped, the residual water will be drained out, so do not turn off the power immediately.
- Wait at least 5 minutes after the unit has stopped before turning off the power. When not turning off a power supply, a remains operation about 20 minutes back drain pump stops.
  When a safe circuit operates, operation of an air conditioner is stopped.
- During air conditioning operation, when water leaks from the inside of an are conditioner or a drain pump kit, please stop operation immediately.
- Since the drain exit is choked up or there is possibility that the safe circuit may not operate normally, please inform the store of purchase.

Electric wiring

Application model	FAY71LVE FAYP71LV1	FXA20·25·32LVE(C) FXA40·50·63LVE FXAQ20·25·32MVE FXAQ40·50·63MVE	FAQ71BUV1B
Connection diagram	X2M Tes2 ⏚ 1 2 3	X2M ⏚ L N	X2M ⏚ 1 2 3

The earth wire (copper) should be at least 2.0mm² or ϕ 1.6mm.
When the relay wire harness is connected, remove the X15A short-circuit connector.

Note1: Don't forget to turn on the power. If it is not turned on, the air conditioner will perform an error stop and operation will not be possible.
Note2: Make sure that slide switch SS1 on the drain pump kit printed circuit board assembly is set to P2 and slide switch SS2 is set to P1.
Note3: The relay wire harness cannot be extended.
Note4: Turning on the power will close the K2R connector, making is a non-volt B connector.

1. Features

Efficient for perimeter zone airconditioning.

FXLQ-MA

Can be built into pericounter

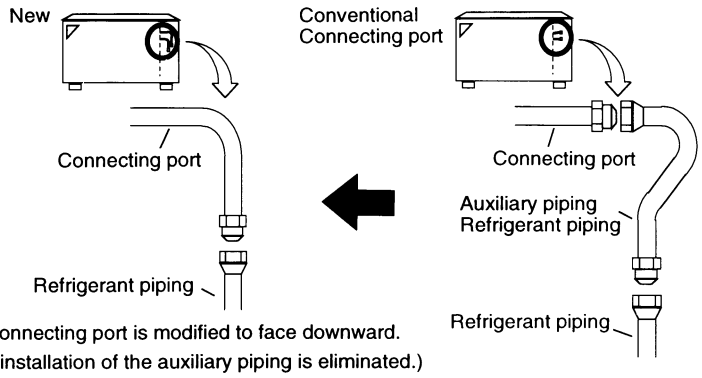

FXNQ-MA

(1) New round-shape adds the gentle feeling to office environment.

- Mild color is applied to the discharge grille and the bottom frame.
- The slimming top plate ensures elegance in dynamics.

(2) Improvement on the installation

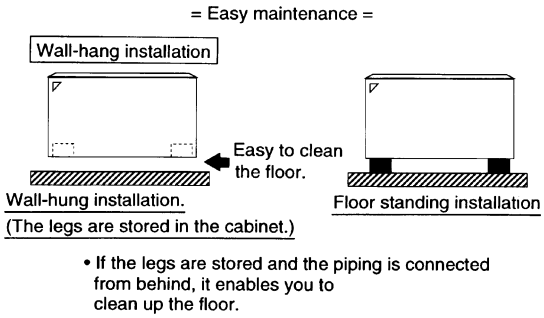

- The piping connection work is facilitated drastically.

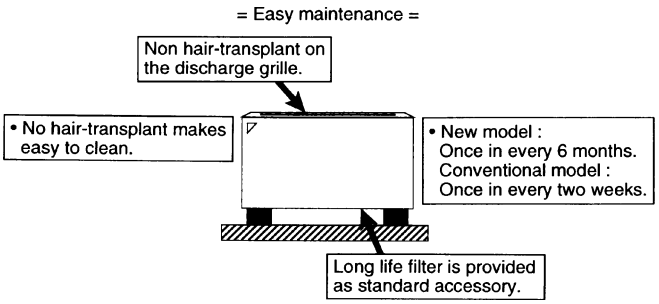

(3) Easy maintenance

When the unit is hung on the wall, it is easy to clean the floor. (Exposed type)

- The maintenance of the discharge grille is improved.
- The interval of filter cleaning is prolonged.

FXLQ・FXNQ50MAVE				0.6	15	0.035	0.5	110	110
FXLQ・FXNQ63MAVE				0.6	15	0.035	0.5	110	110

Symbols:

MCA : Min. Circuit Amps (A)
MFA : Max. Fuse Amps (See note 5)
KW : Fan Motor Rated Output(KW)
FLA : Full Load Amps(A)
IFM : Indoor Fan Motor

Note:

1. Voltage range

   Units are suitable for use on electrical systems where voltage supplied to unit terminals is not below or above listed range limits,

2. Maximum allowable voltage unbalance between phases is 2%.

3. MCA/MFA

   MCA = 1.25 X FLA

   MFA ≦ 4 X FLA

   (Next lower standard fuse rating. Min. 15A)

4. Select wire size based on the MCA.

5. Instead of fuse, use Circuit Breaker.

Note:

1. The operating conditions are assumed to be standard (JIS conditions).
2. These operating values were obtained in a dead room (conversion values).
   Sound level will vary depending on a range of factors such as the construction (acoustic absorption coefficient) of the particular room in which the equipments installed.

9. Installation

Installation Example

<<FXLQ>>

<<FXNQ>>

C : 3P086153-1J

Service Space

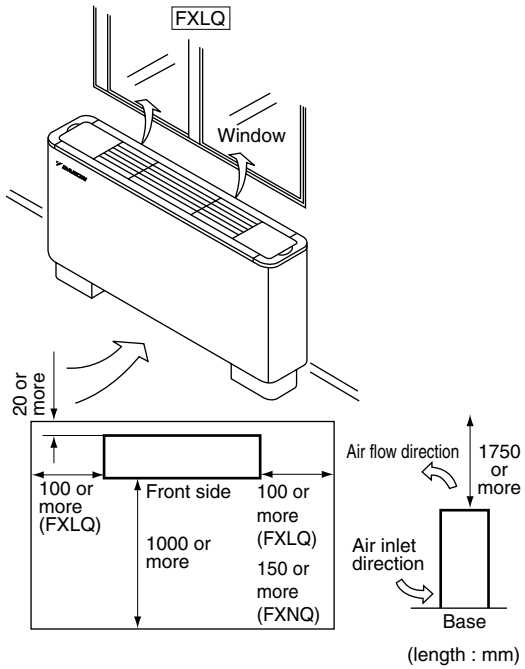

(1) Select an installation site where the following conditions are satisfied and that meets with your customer's approval.

- Where the floor is strong enough to dear the indoor unit weight.
- Where the floor is not significantly inclined.
- Where nothing blocks the air passage.
- Where condensate can be properly drained.
- Where sufficient clearance for installation and maintenance can be ensured.
- Where optimum air distribution can be ensured.
- Where there is no risk of flammable gas leakage.
- Where piping between indoor and outdoor units is possible within the allowable limit. (Refer to the installation manual of the outdoor unit.)

⚠ CAUTION

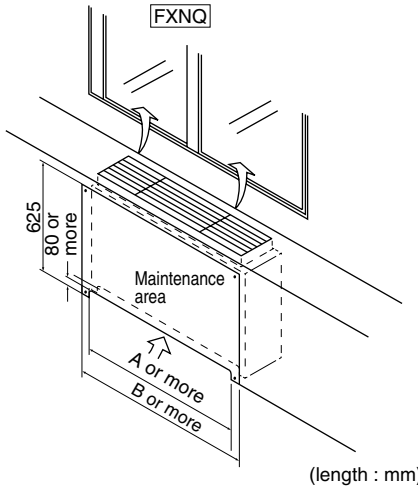

- Install the indoor and outdoor units, power supply wiring and connecting wires at least 1 meter away from televisions or radios in order to prevent image interference or noise.
  (Depending on the radio waves, a distance of 1 meter may not be sufficient enough to eliminate the noise.)

FXLQ

(length : mm)

FXNQ

(length : mm)

(IMPORTANT) Leave sufficient clearance for air inlet and maintenance.

(2) How to open / close the front panel

1. Open the lid of control panel (both left and right)
2. Remove screws (both left and right) that lock the knobs in position.
3. Push the knobs (both left and right) to the rear.
4. Lift the front of the top plate.
5. Lower the front panel towards the front of the unit.

- To close, perform the procedure in opposite order. Pull towards the front unit the knob snaps in place.

Drain Piping Work

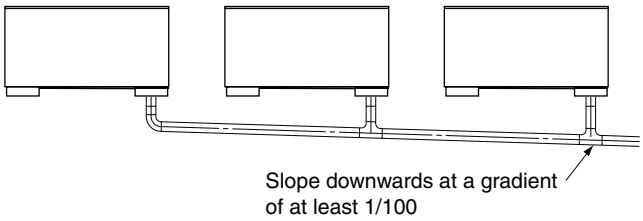

〈〈**Rig the drain pipe as shown below and take measures against condensation. Improperly rigged piping could lead to leaks and eventually wet furniture and belongings.**〉〉

(1) Carry out the drain piping.

Connect the drain hose (1) using the attached hose and parts, as shown in the right drawing.

- If converging multiple drain pipes, install according to the procedure shown below.

Select converging drain pipes whose gauge is suitable for the operating capacity of the unit.

(2) After piping work is finished, check drainage flows smoothly.
- Add approximately 1 liter of water slowly from the air outlet and check drainage flow.

(3) Be sure to insulate all indoor pipes.

⚠ CAUTION

- Drain piping connections
  Do not connect the drain piping directly to sewage pipes that smell of ammonia. The ammonia in the sewage might enter the indoor unit through the drain pipes and corrode the heat exchanger.
- Keep in mind that it will become the cause of getting drain pipe blocked if water collects on drain pipe.

1. Features

Flexibility in installation location

Because the installation location, air flow direction and air flow rate can be selected according to the shape, lighting, and interior design of a room, the Ceiling Suspended Cassette Type air conditioner will create a comfortable environment throughout the room. This is a completely new air conditioning system that produces the comfort level of a four-way air flow, ceiling-mounted cassette type air conditioner with the ease of a ceiling-suspended unit.

Development back ground of FXUQ-MA

Flexible Design

- •Daikin unique cassette
- •Low Silhouette design:
  71 Type - 165mm thickness
  (Current Multi Flow Cassette:338mm)
- •Aesthetically pleasing design
- •High ceiling up 3.5m
- •Flexible air distribution by control of direction and volume

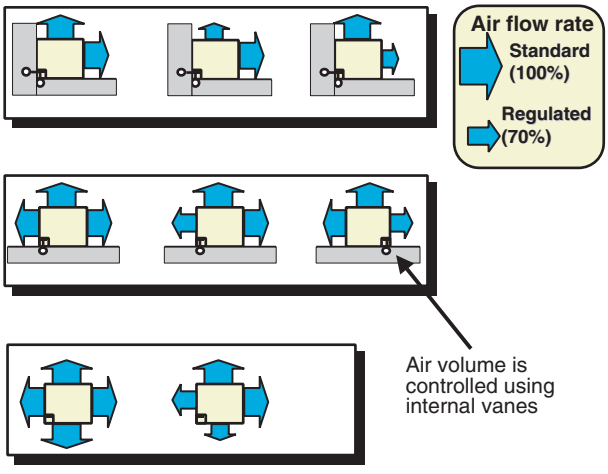

Easy Installation

- •Flexible piping installation (3 directions)
- •Ceiling space not required

Easy Maintenance

- •Long life filter (standard accessories)
- •Drain pump(standard accessories)

<Variable discharge direction and air volume>

Connection Example

1. Wiring Work
- The connecting line between SkyAir Indoor Unit – BEV Unit : 3 cores…like a Transmission Line
- BEV Unit's power supply line; Single phase 2 line…like a VRV Indoor unit
- BEV Unit – other **VRV** indoor unit or outdoor unit – : 2 cores…DIII network wiring (super wiring)

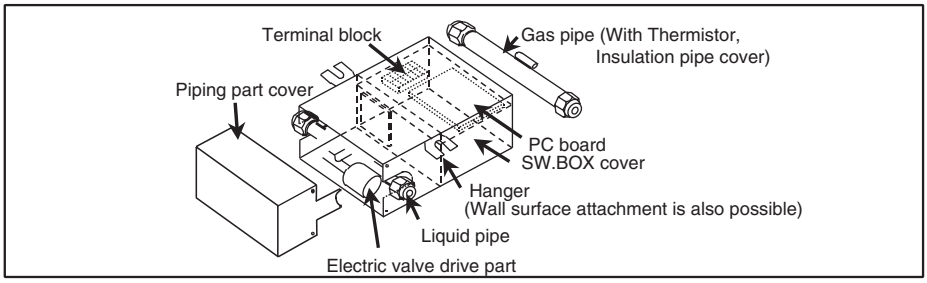

2. Piping work
SkyAir side,Outdoor Unit Side,They are both flare connection.

Consideration matter

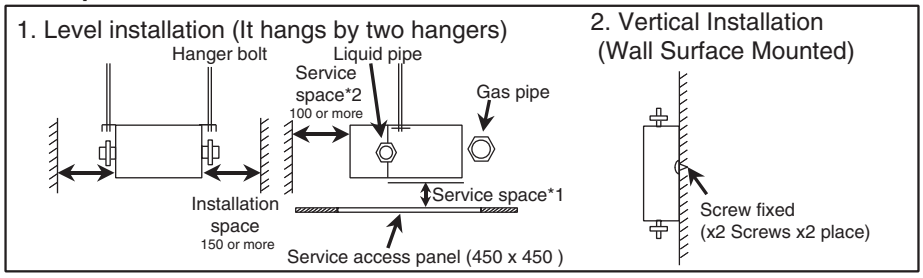

- When connecting centralized-control device, it is necessary to **install an interface adaptor for SkyAir series in an indoor unit.**

- Distance between indoor unit and –BEV unit must be **within 5m**.

Outline figure

Installation pattern / maintenance

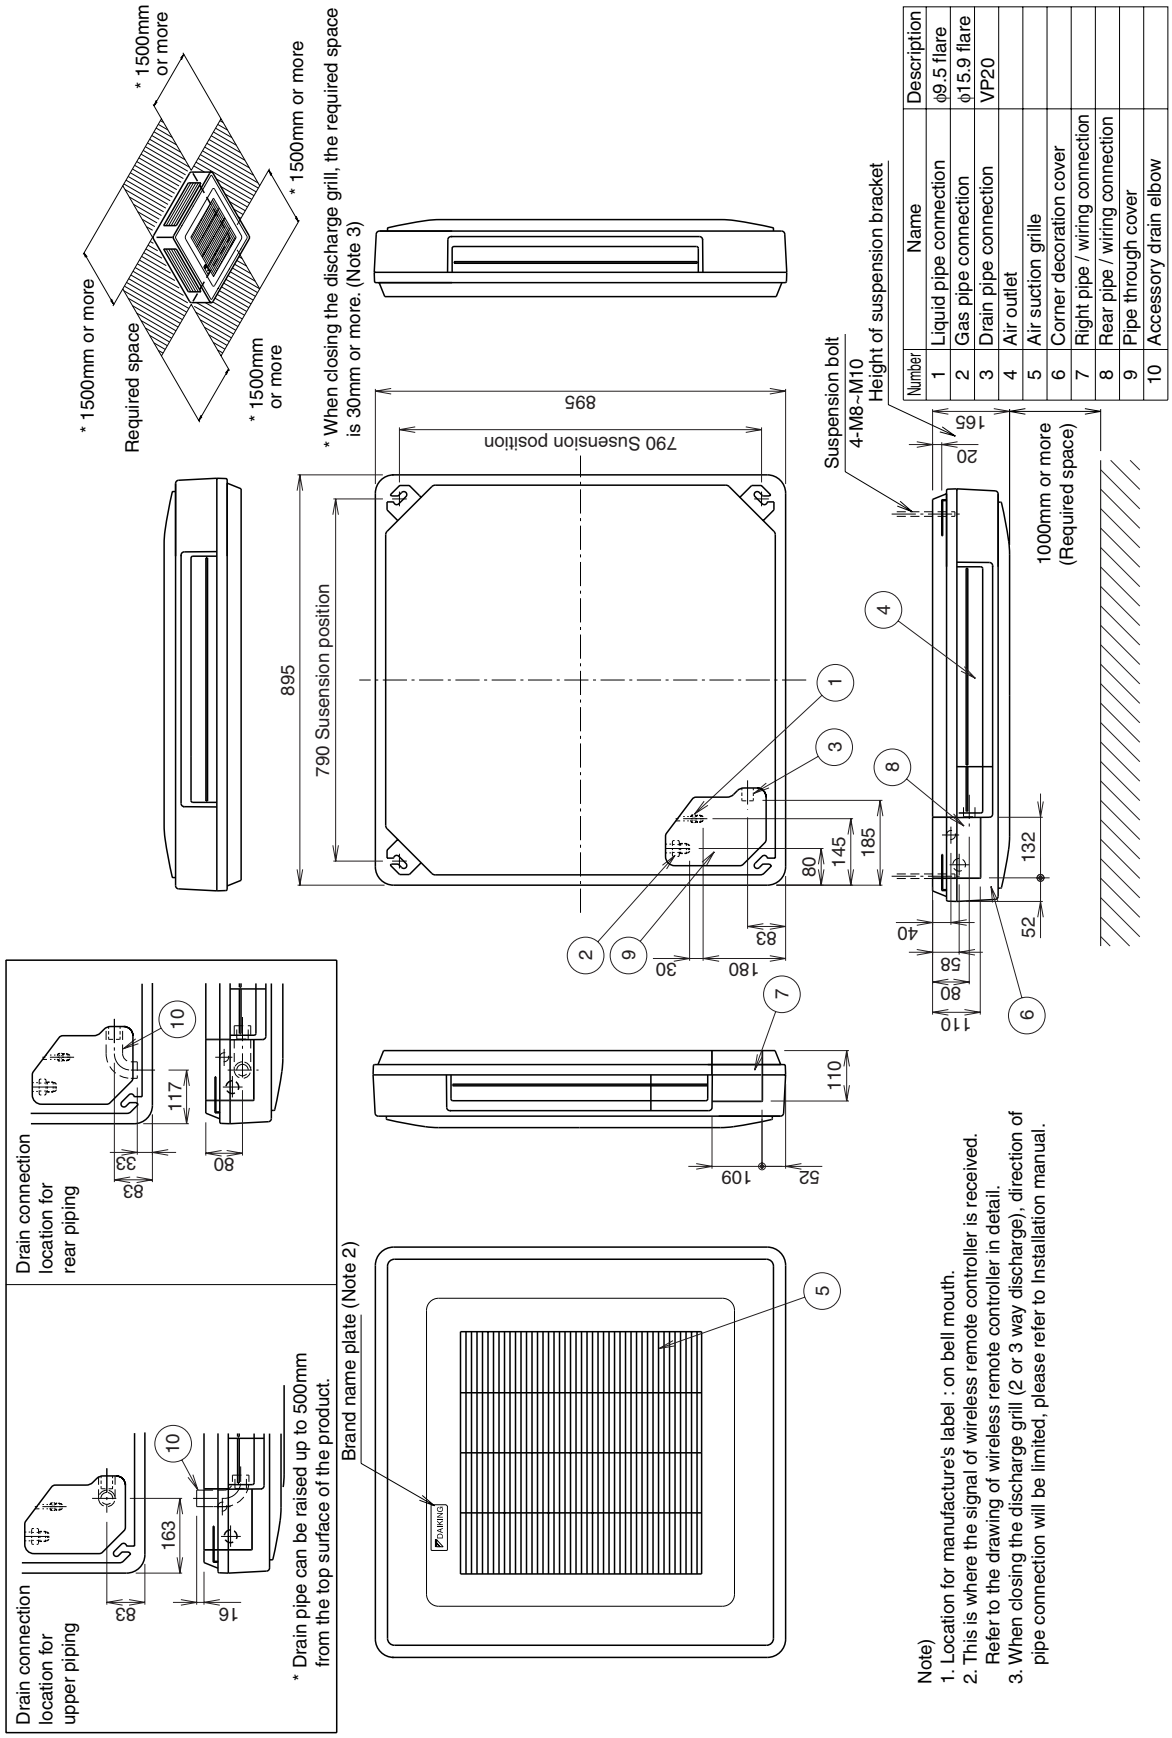

*1; Service space for switch box.
(Service access panel is required for the bottom side. When there is nothing, 350 or more spaces are required.)
*2; For electric valve drive part's maintenance. (a control box is removed)

6. Electric Characteristics

Units				Power supply		IFM		Input(W)	
Model	Hz	Volts	Voltage range	MCA	MFA	KW	FLA	Cooling	Heating
BEVQ71M(A)VE + FXUQ71M(A)V1	50	220-240	MAX. 264 Min. 198	0.8	15	0.045	0.6	189	169
BEVQ100M(A)VE + FXUQ100M(A)V1				1.3	15	0.090	1.0	298	278
BEVQ125M(A)VE + FXUQ125M(A)V1									

Symbols:

MCA : Min. Circuit Amps (A)
MFA : Max. Fuse Amps (See note 5)
KW : Fan Motor Rated Output(KW)
FLA : Full Load Amps(A)
IFM : Indoor Fan Motor

Note:

1. Voltage range
   Units are suitable for use on electrical systems where voltage supplied to unit terminals is not below or above listed range limits.
2. Maximum allowable voltage unbalance between phases is 2%.
3. MCA/MFA
   MCA = 1.25 X FLA
   MFA ≦ 4 X FLA
   (Next lower standard fuse rating. Min. 15A)
4. Select wire size based on the MCA.
5. Instead of fuse, use Circuit Breaker.

10. Installation

10.1 Indoor Units

Installation Example

Service Space

Select an installation site where the following conditions are fulfilled and that meets your customer's approval.

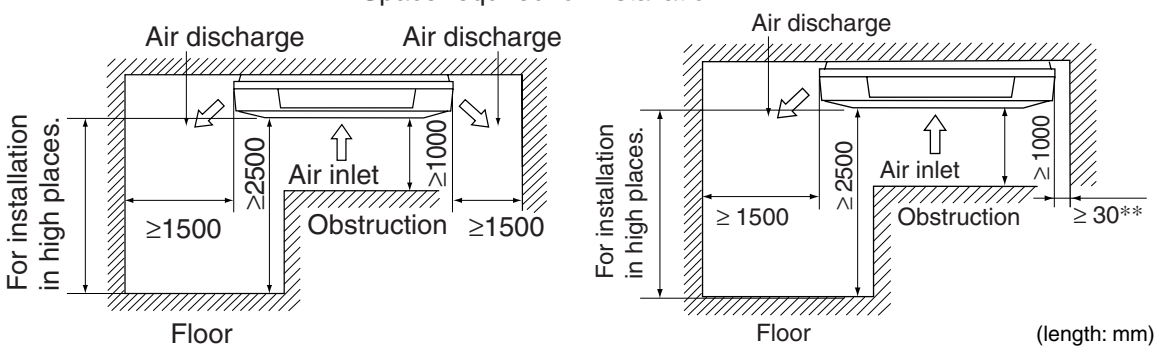

- In the upper space (including the back of the ceiling) of the indoor unit where there is no possible dripping of water from the refrigerant pipe, drain pipe, water pipe, etc.
- Where optimum air distribution can be ensured.
- Where nothing blocks air passage.
- Where condensate can be properly drained.
- Where the ceiling is strong enough to bear the indoor unit weight.
- Where the false ceiling is not noticeably on an incline.
- Where sufficient clearance for maintenance and service can be ensured.
- Where there is no risk of flammable gas leakage.
- Where piping between indoor and outdoor units is possible within the allowable limit. (Refer to the installation manual for the outdoor and BEV units.)

[CAUTION]

Only use the included parts or parts which match the specifications when installing the unit.

- Install the indoor unit no less than 2.5 m above the floor. Where unavoidably lower, take what measures are necessary to keep hands out of the air outlet.

Space required for installation

(length: mm)

** Space is required to attach/detach corner covers.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Bolt Pitch

1. FOR 4-WAY AIR DISCHARGE

1. **Relation of holes for indoor unit, suspension bolt position, piping and wiring. (Refer to Fig. 2)**
   (Illustrations seen from ceiling)
   * Dimensions in ( ) for 100 and 125 models
   *** Suspension bolt pitch

2. **Make holes for suspension bolts, refrigerant and drain piping, and wiring. (Refer to Fig. 3)**
   - Refer to the paper patten for the locations.
   - Select the location for each of holes and open the holes in the ceiling.

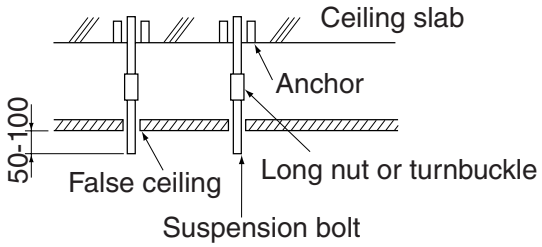

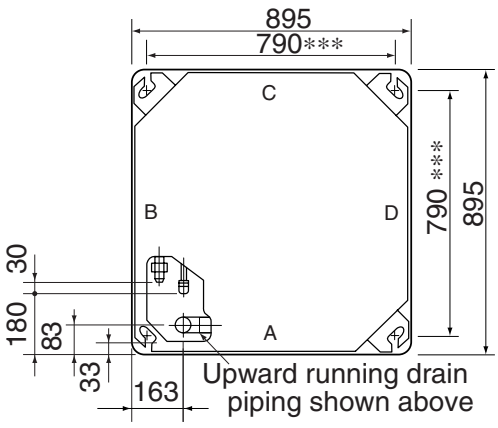

Fig. 3

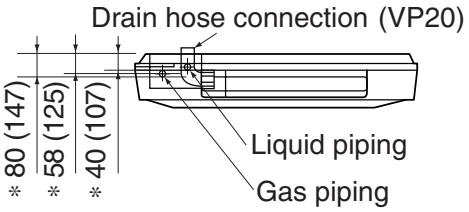

Fig. 2

NOTE
All the above parts are field supplied.

2. FOR 2-WAY OR 3-WAY AIR DISCHARGE

2-way and 3-way air discharge must be set from the remote controller. For details, see FIELD SETTING.

1. **Relation of holes for indoor unit, suspension bolt position, piping and wiring. (Refer to Fig. 8)**

NOTE
Illustrations seen from ceiling
* Dimension in ( ) for 100 and 125 models
***Suspension bolt pitch

2. **Make holes for suspension bolts, refrigerant and drain piping, and wiring. (Refer to Fig. 9)**
   - Refer to paper pattern for the locations.
   - Select the location for each of holes and open the holes in the ceiling.

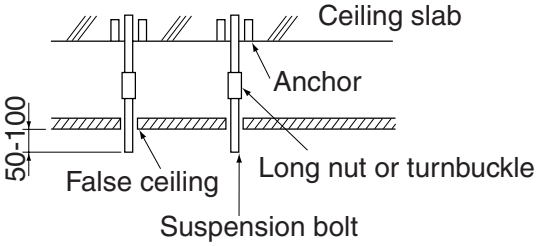

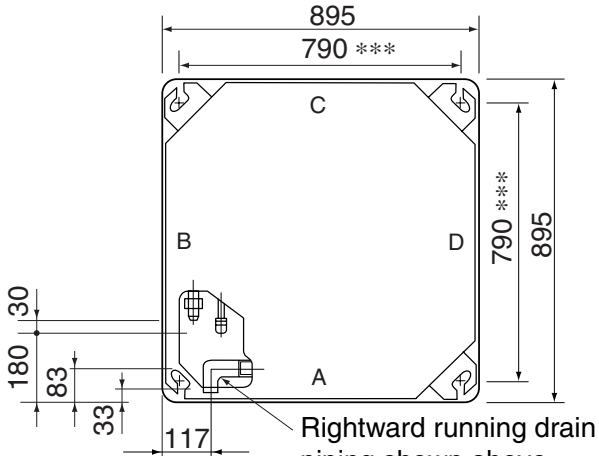

Fig. 9

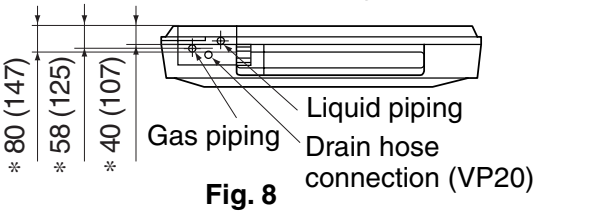

Fig. 8

12

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Drain Piping Work

1. Rig drain piping (Refer to Fig. 26)

As for drain work, perform piping in such a manner that water can be drained properly.
As for drain piping, the connection can be made from three different directions.

- Employ a pipe with either the same diameter or with the diameter larger (excluding the raising section) than that of the connecting pipe (PVC pipe, nominal diameter 20 mm, outside diameter 26 mm).
- Keep the drain pipe short and sloping downwards at a gradient of at least 1/100 to prevent air pockets from forming. **(Refer to Fig. 27)**

⚠ CAUTION

Water pooling in the drainage piping can cause the drain to clog.

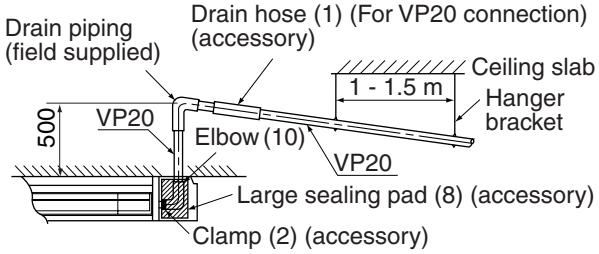

Fig. 26

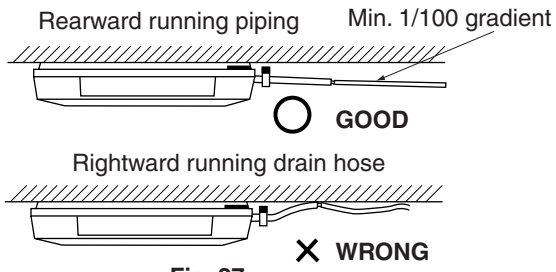

Fig. 27

- To keep the drain hose from sagging, space hanging wires every 1 to 1.5 m. **(Refer to Fig. 26)**
- Use only the included drain hose (1), (for rightward running drain hose) or elbow (10) (for upward running drain hose) and clamp (2).
- Fit the drain hose (1) or elbow (10) over the drain pipe up to the neck and fasten tight with the clamp (2).
- Insulate the clamp (2) and drain hose or elbow (10) with the included sealing pad (8). **(Refer to Fig.28)**
- Make sure that heat insulation work is executed on the following 2 spots to prevent any possible water leakage due to dew condensation.
  - Insulate the drain hose inside the building.
  - Drain socket

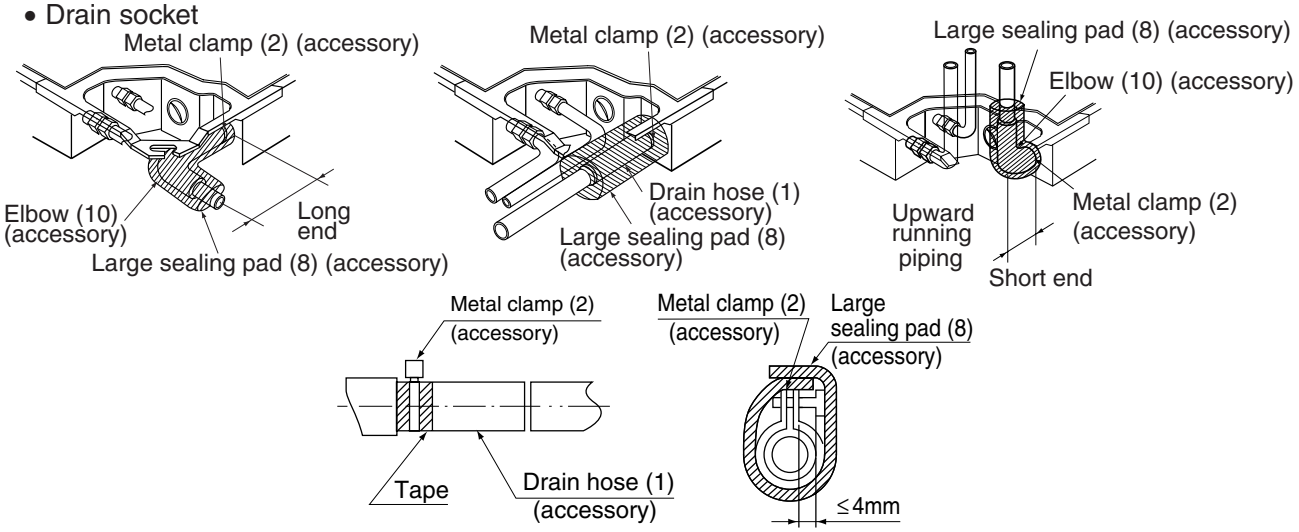

Fig. 28

⚠ CAUTION

- Do not twist or bend the drain hose (1), so that excessive force is not applied to it, as this could cause leaks.

- If converging multiple drain piping, install according to the procedure shown below. **(Refer to Fig. 29)**

Select converging drain piping whose gauge is suitable for the operating capacity of the unit.

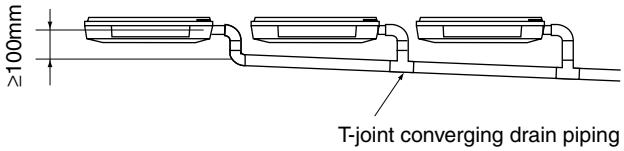

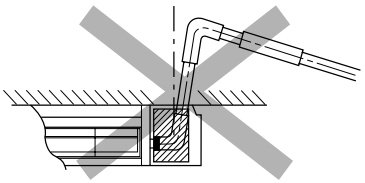

Fig. 29

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

PRECAUTIONS FOR UPWARD DRAIN RAISING PIPING

- Install the drain raising pipes at a height of less than 500 mm.
- Install the drain raising pipes at a right angle to the indoor unit. **(Refer to Fig. 30)**

WRONG

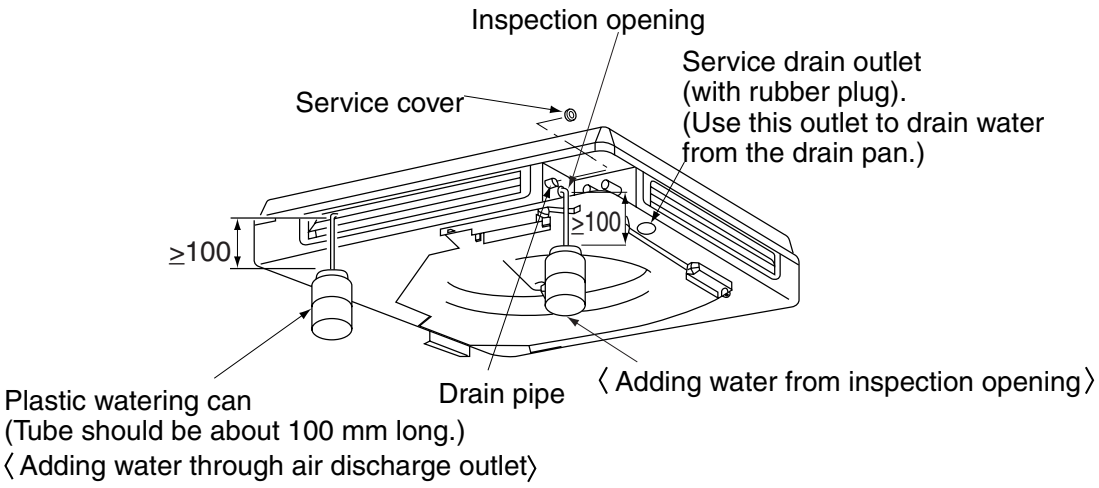

Fig. 30

⚠ CAUTION

If the upward running drain hose leans at a slant, the float switch will malfunction and water will leak.

2. After piping work is finished, check if drainage flows smoothly.

- Open the water inlet lid, add approximately 1 liter of water slowly and check drainage flow. **(Refer to Fig. 31)**

Method of adding water

Fig. 31

[Caution]

Drain piping connections

- Do not connect the drain piping directly to sewage pipes that smell of ammonia. The ammonia in the sewage might enter the indoor unit through the drain pipes and corrode the heat exchanger.

12

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

CAUTION

- Electrical wiring work should be done by a certified electrician.
- If someone who does not have the proper qualifications performs the work, perform the following after the test run is complete.

- Remove the control box lid and change the emergency switch above the PC board assembly of the indoor unit from “NORM.” to “EMERG.”. Connect the single-phase power supply (1, 3) and ground wire to the inter-unit wiring (50Hz 220-240V) terminal block and confirm drain operation.Be sure to change the switch before turning on the power. **(Refer to Fig. 32)**

CAUTION

- Clamp solidly to clamp C to tension is not added to the wiring connections.
- Be aware that the fan will turn during the operation.

- After confirming drainage, turn off the power and be sure to change the emergency switch back to “NORM.”.

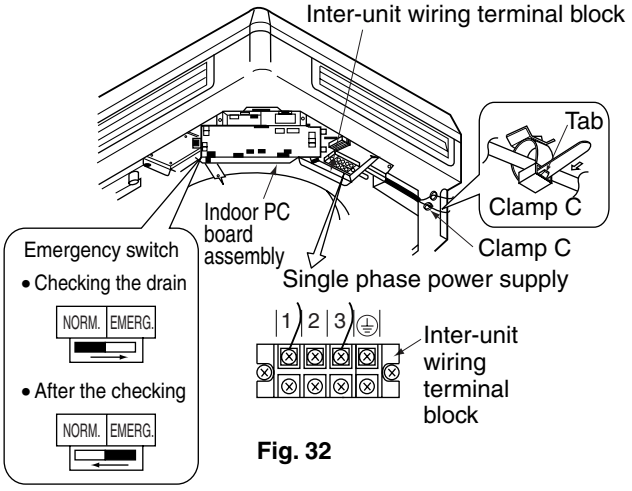

Fig. 32

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

10.2 Connecting Units

Before Installation

- **When moving the unit while removing it from the carton box, be sure to lift it by holding on to the two lifting lugs without exerting any pressure on other parts, especially, the refrigerant piping.**
- Be sure to check the type of R-410A refrigerant to be used before installing the unit. (Using an incorrect refrigerant will prevent normal operation of the unit.)
- BEV unit is an electronic expansion valve unit for allowing the indoor unit to be connected to the system for the VRV system.
- BEV unit may only be connected to the models shown in the table below. Do not attempt connection with other models.

Indoor unit
Ceiling Suspended Cassette Type

- See the included installation manuals on the VRV outdoor unit and the ceiling suspended cassette type indoor unit for details.
- For the indoor unit connected to the BEV unit, cooling/heating cannot be switched over with the remote controller.
- When the cooling/heating free system is connected to the BS unit, a cooling/heating selection right is allowed.
- When the ceiling suspended cassette type indoor unit and BEV unit are used for all indoor units, a separate “Cool/Heat SELECTOR” is needed to enable the cooling/heating switchover.

Service Space.

《 When hanging the unit from the ceiling 》

Install so that the control box lid is facing down.

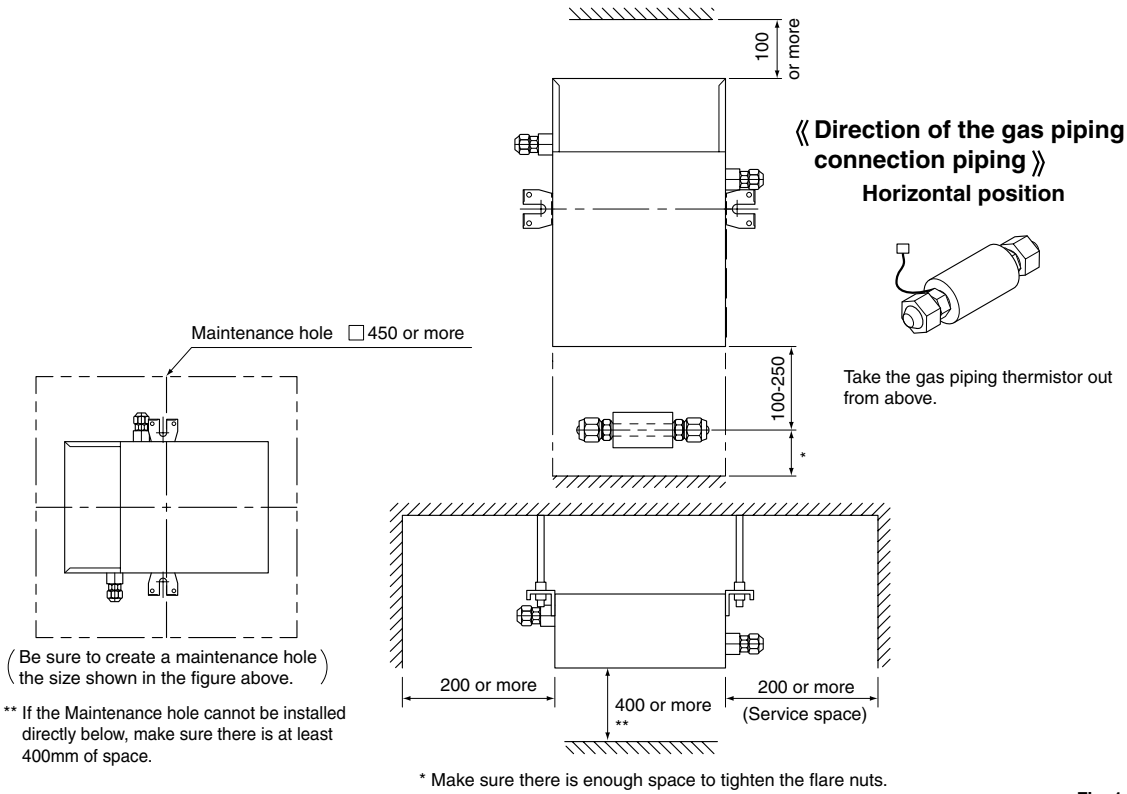

Fig. 1

(length: mm)

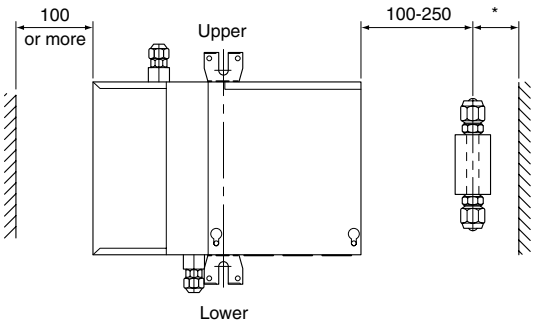

12

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

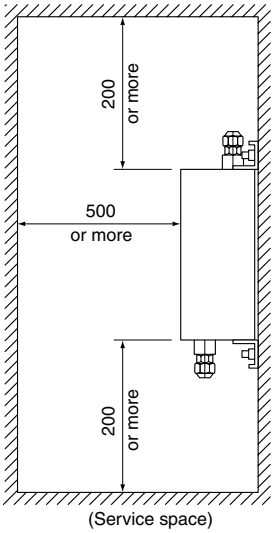

.

《When installing the unit on a wall》

Make sure the wiring outtake is facing down, and no other direction.

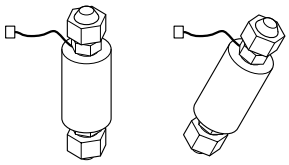

* Make sure there is enough space to tighten the flare nuts.

《Direction of the gas piping connection piping》

Upright and diagonal position

Take the gas piping thermistor out from above.

Fig. 2
(length: mm)

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Bolt Pitch

《 When hanging the unit from the ceiling 》

(1) Check the relative locations of ceiling hole, unit, and hanging bolts.

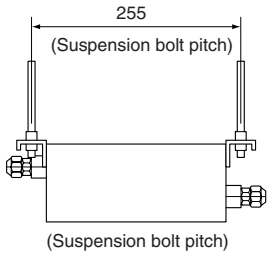

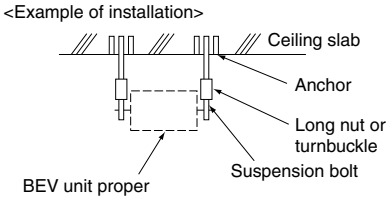

Fig. 3

(length: mm)

Note: All the above parts are field supplied.

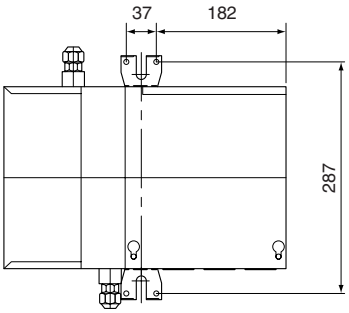

Fig. 4

(2) Open the eyebolt holes or the holes for passing the piping and wiring out of the unit.
- Set the locations for the above holes, open them up and then lay the piping (refrigerant) and wiring (including both power supply and transmission wiring) up to the piping and wiring connections in the unit.
- It might be necessary to reinforce the ceiling frame to maintain the levelness and to prevent vibration. Consult an architect or carpenter for details.

(3) Install the hanging bolts. (Use M8 hanging bolts.)
- If it is pre-set, use hole-in anchors. Otherwise, use embedded inserts or embedded foundation bolts to make sure that the weight of the unit can be supported. Adjust the distance to the ceiling beforehand.

《 When installing the unit on a wall 》

(1) Check the relative locations of ceiling hole, unit, and hanging bolts.

(length: mm)

Fig. 5

- Use only accessories and parts which are of the designated specification when installing.

《 When hanging the unit from the ceiling 》

(1) Temporarily install the BEV unit.
- Mount the hanging fittings to hanging bolts. Secure the hanging fittings on the top and the bottom with nuts (M8, field supplied) and washers (M8: Outside diameter size 24 to 28 mm) (field supplied).

(2) Adjust the height of the main unit with the nut.
(3) Check that the main unit is installed on the level.
(4) Tighten the nut on both the top and the bottom to fix securely.

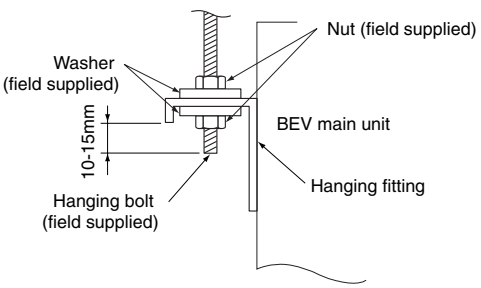

Fig. 6

《 When installing the unit on a wall 》

(1) Mount the hanging fittings with the mounting screws (4 pieces).
(2) Use M4 screws.

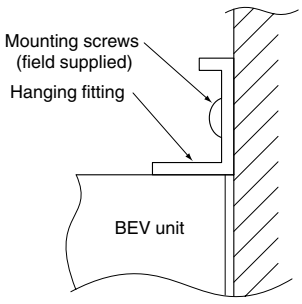

Fig. 7

12

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Refrigerant Piping work

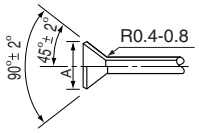

〈This shows the piping method between the outdoor unit and the BEV unit and the indoor unit. Select the pipe size and refrigerant branch kit depending on how the piping will be laid.〉
〈For refrigerant piping of outdoor units, see the installation manual attached to the outdoor unit.〉
〈Execute heat insulation work completely on both sides of the gas piping and the liquid piping. Otherwise, a water leakage can result sometimes.〉
〈When using a heat pump, the temperature of the gas piping can reach up to approximately 120˚C, so use insulation which is sufficiently resistant.〉
〈Improve the insulation on the refrigerant piping depending on the installation environment. If the insulation is not sufficient, condensation may form on the surface of the insulation.〉
〈Before refrigerant piping work, check which type of refrigerant is used. Proper operation is not possible if the types of refrigerant are not the same.〉

⚠ CAUTION

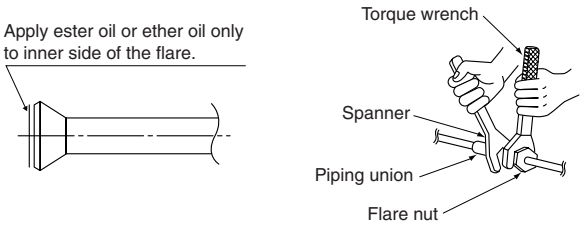

- **Use a pipe cutter and flare suitable for the type of refrigerant.**
- **Apply ester oil or ether oil around the flare section before connecting.**
- **To prevent dust, moisuture or other foreign matter from infiltrating the tube, either pinch the end or cover it with tape.**
- **Do not allow anything other than the designated refrigerant to get mixed into the refrigerant circuit, such as air, etc. If any refrigerant gas leaks while working on the unit, ventilate the room thoroughly right away.**

- The outdoor unit is charged with refrigerant.
- For the refrigerant piping and branching, follow the **"piping connection procedure"**.
- Be sure to use both a spanner and torque wrench together, as shown in the drawing, when connecting or disconnecting piping to/from the unit.
- Refer to the Table 1 for the dimensions of flare nut spaces.
- When connecting the flare nut, apply ether oil or ester oil only to inner side of the flare and initially tighten by hand 3 or 4 turns before tightening firmly.
- Refer to the Table 1 to determine the proper tightening torque.

Table 1

Pipe size	Tightening torque	Flare dimension A (mm)	Flare shape
ϕ9.5 (3/8")	32.7 – 39.9N·m (333 – 407 kgf·cm)	12.8 – 13.2	
ϕ15.9 (5/8")	61.8 – 75.4N·m (630 – 770 kgf·cm)	19.3 – 19.7	

NOTE
The flare nuts used must be those included with the main body.

⚠ CAUTION

Over-tightening may damage the flare and cause a refrigerant leakage.

Not recommendable but in case of emergency

You must use a torque wrench but if you are obliged to install the unit without a torque wrench, you may follow the installation method mentioned below.

When you keep on tightening the flare nut with a spanner, there is a point where the tightening torque suddenly increases. From that position, further tighten the flare nut the angle shown below:

Table 2

Pipe size	Further tightening angle	Recommended arm length of tool
ϕ 9.5 (3/8")	60 to 90 degrees	Approx. 200mm
ϕ15.9 (5/8")	30 to 60 degrees	Approx. 300mm

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

After the work is finished, make sure to check that there is no gas leak.

- Make absolutely sure to execute heat insulation works on the pipe-connecting section after checking gas leakage by thoroughly studying the following figure.
- Wrap the insulation for fitting (3) (4) around the insulation for the joints on the liquid piping side and the gas piping side. **(Refer to Fig. 9, 10)**
- When installing the unit onto the ceiling, make sure that the seam between the insulation for fitting (3) (4) faces up. (Fasten both ends with the clamps (2).) (Fig.9, 10 shows the case of installation on the wall.)
- Wrap the included sealing pad (5) (6) around the insulation for fitting (3) (4). **(Refer to Fig. 8)**

⚠ CAUTION

Be sure to insulate any field piping all the way to the piping connection inside the unit. Any exposed piping may cause condensation or burns if touched.

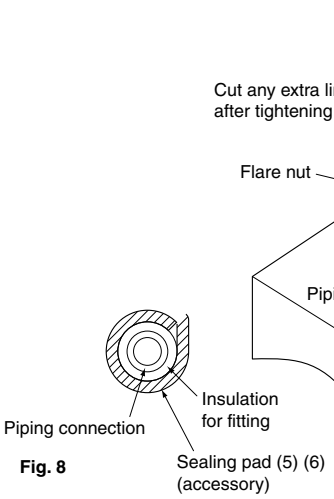

Fig. 8

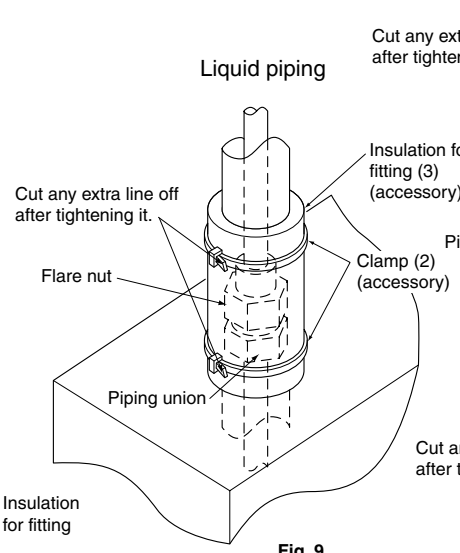

Fig. 9

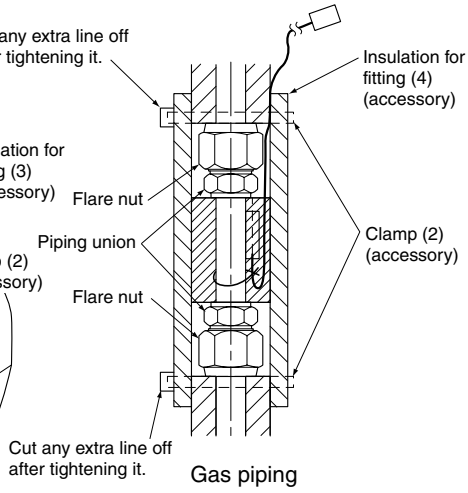

Fig. 10

12

⚠ CAUTION

CAUTION TO BE TAKEN WHEN BRAZING REFRIGERANT PIPING

Do not use flux when brazing refrigerant piping. Therefore, use the phosphor copper brazing filter metal (BCuP) which does not require flux.
(Flux has extremely harmful infulence on refrigerant piping sysems. For instance, if the chlorine based flux is used, it will cause piping corrosion or, in particular, if the flux contains fluorine, it will damage the refrigerant oil.)

- Before brazing local refrigerant piping, nitrogen gas shall be blown through the piping to expel air from the piping. If your brazing is done without nitrogen gas blowing, a large amount of oxide film develops inside the piping, and could cause system malfunction.
- When brazing the refrigerant piping, only begin brazing after having carried out nitrogen substitution or while inserting nitrogen into the refrigerant piping. Once this is done, connect the indoor unit with a flared connection.
- Nitrogen should be set to 0.02 MPa (0.2 kg/cm^2) with a pressure-reducing valve if brazing while inserting nitrogen into the piping.

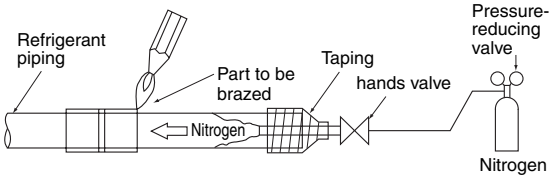

Fig. 11

⚠ CAUTION

Do not use anti-oxidants when brazing the piping joints. Residue can clog piping and break equipment.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Piping connection procedure

- Make sure the length of the refrigerant piping between the BEV unit and the indoor unit is no more than 5m and that the difference in height is at least 4m.

(1) Connection example for the indoor unit

- Only one indoor unit may be connected to each BEV unit.

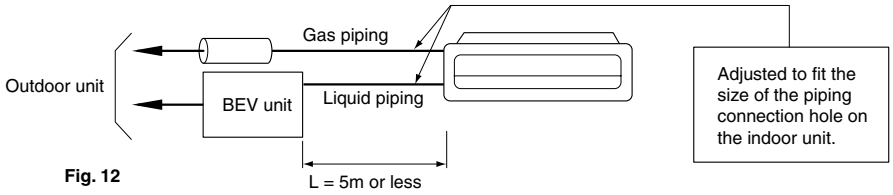

Fig. 12

(2) Height difference between indoor units

- Install the BEV unit in the 15m range of difference in height between the indoor units.
- Make sure the difference in height between the BEV unit and the indoor unit is no more than 4m.

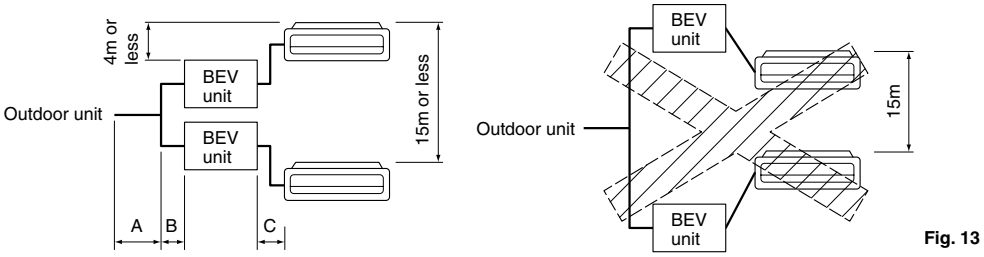

Fig. 13

(3) Allowable length after split (actual piping length)

B+C≤35m (length from the first branch piping to the indoor unit)

(4) Additional refrigerant amount

When measuring the amount of additional to refrigerant to fill, include the length of the liquid piping between the BEV unit and the indoor unit.

Additional filling amount = a+b+c+d+e+f+g+h+i+j+k+l+m+n+p+q

Refer also to the installation manual included with the outdoor unit.

Example of refrigerant branch using a REFNET joint

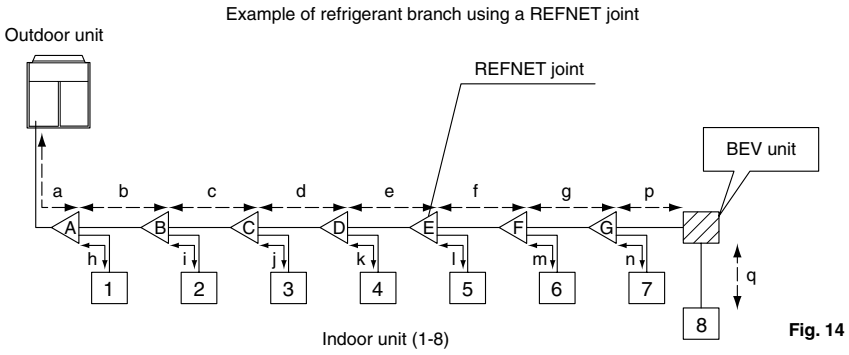

Fig. 14

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Wiring Example and How to Set the Remote Controller

1 HOW TO CONNECT WIRINGS

- Connect the piping only after finishing the refrigerant piping work.
- Make sure all power supply is shut down to the unit first.
- As shown in the Fig. 16, loosen the two screws in the control box lid, remove it, and do the wiring work.
- Once all wiring is done, attach the control box lid and secure it with the screws.
  If you are using “4. DEF AULT SETTINGS,” however, finish that and then attach the control box lid and secure it with the screws.

2 THE GAS PIPING THERMISTOR

- Connect to (X5A) on A1P.
- Bundle the gas piping thermistor lead wire and the branch wiring (transmission) using the included clamping material.
- Tension is not added to the gas pipe thermistor lead wire coming out of the unit.

• Power supply wiring • Ground wire

Connect the wiring to R (L) and S (N) on the power supply terminal block (X1M). Also, connect the ground wire to the ground terminal. Take the wiring and the ground wire into the unit through the wiring pass-through hole, and firmly secure them together using the included clamp (1).

• Indoor unit inter-unit wiring

Connect the wires to 1, 2, and 3 on the power supply terminal block (X1M). Take the wires into the unit through the wiring pass-through hole, and firmly secure them using the included clamp (1).

• Transmission wiring

Connect the wires to F1 and F2 on the transmission terminal block (X2M). Take them into the unit through the wiring pass-through hole, and firmly secure the gas piping thermister lead wire and the transmission wiring using the included clamp (1).

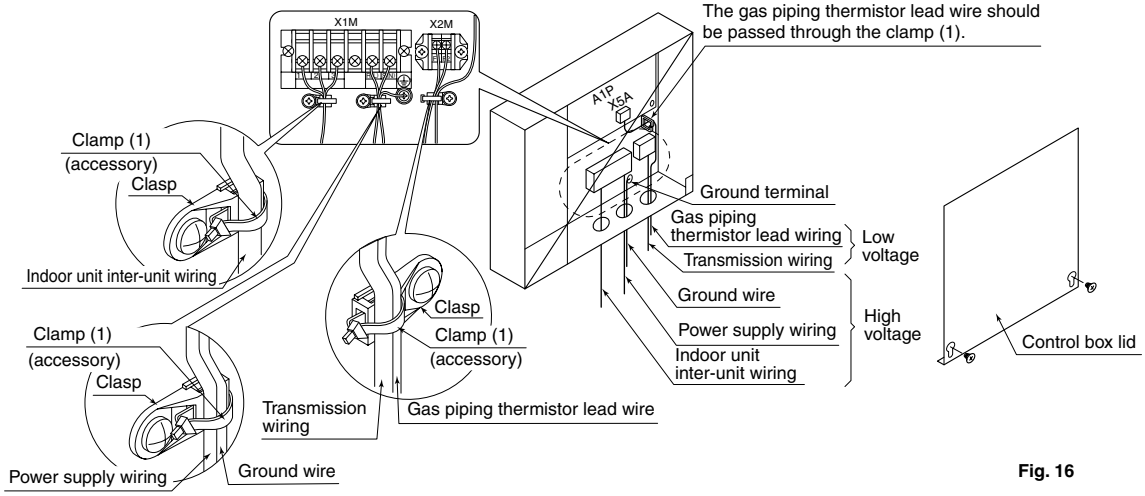

Fig. 16

[CAUTIONS]

- Do not under any circumstances connect the power supply wiring to the transmission terminal block (F1, F2), as this may cause damage to the entire system.

⚠ CAUTION

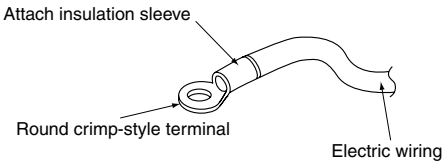

- When clamping wiring, use the included clamping material to prevent outside presure being exerted on the wiring connections and clamp firmly. When doing the wiring, make sure the wiring is neat and does not cause the control box lid to stick up, then close the cover firmly.
- When attaching the control box lid, make sure you do not pinch any wires.
- After all the wiring connections are done, fill in any gaps in the through holes with putty or insulation (procured locally) to prevent small animals and insects from entering the unit from outside. (If any do get in, they could cause short circuits in the control box.)
- Outside the machine, separate the weak wiring (gas piping thermistor lead wire, transmission wiring) and strong wiring (power supply wiring, inter-unit wiring, ground wire, and other power wiring) at least 50mm so that they do not pass through the same place together. Proximity may cause electrical interference, malfunctions, and breakage.

12

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

[PRECAUTIONS]

1. Use round crimp-style terminals for connecting wiring to the power supply terminal block.
   If unavailable, observe the following points when wiring.
   - Do not connect wiring of different gauge to the same power supply terminal. (Looseness in the connection may cause overheating.)
   - Use the specified electric wiring. Connect the wiring securely to the terminal. Lock the wiring down without applying excessive force to the terminal. (Tightening torque: 131N·cm ±10 %)

2. **Tightening torque for the terminal screws.**
   - Use the correct screwdriver for tightening the terminal screws. If the blade of screwdriver is too small, the head of the screw might be damaged, and the screw will not be properly tightened.
   - If the terminal screws are tightened too hard, screws might be damaged.
   - Refer to the table below for the tightening torque of the terminal screws.

Terminal	Size	Tightening torque
Transmission terminal block (2P)	M3.5	0.79 – 0.97N·m
Power supply and inter-unit wiring terminal block (6P)	M4	1.18 – 1.44N·m
Ground terminal	M4	1.44 – 1.94N·m

3. Do not connect wiring of different gauge to the same grounding terminal. Looseness in the connection may deteriorate protection.
4. Outside of the unit, keep the weak wiring (gas piping thermistor lead wire, transmission wiring) at least 50 mm away from strong wiring (power supply wiring, inter-unit wiring, ground wire, and other power wiring). The equipment may malfunction if subjected to electrical (external) noise.
5. For remote controller wiring, refer to the “INSTALLATION MANUAL OF REMOTE CONTROLLER” attached to the remote controller.
6. **Never connect power supply wiring to the terminal block for remote controller wiring. A mistake of the sort could damage the entire system.**
7. Use only specified wiring and tightly connect wiring to terminals. Be careful wiring do not place external stress on terminals. Keep wiring in neat order and so as not to obstruct other unit such as popping open the control box lid. Make sure the lid closes tight. Incomplete connections could result in overheating, and in worse case, electric shock or fire.

[WIRING EXAMPLE]

- Fit the power supply wiring of each unit with a switch and fuse as shown in the drawing.

COMPLETE SYSTEM EXAMPLE (3 systems)

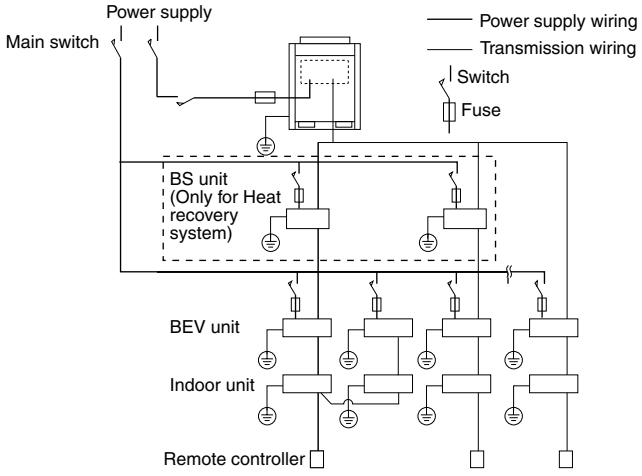

Fig. 17

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

1. When using 1 remote controller for 1 indoor unit. (Normal operation)

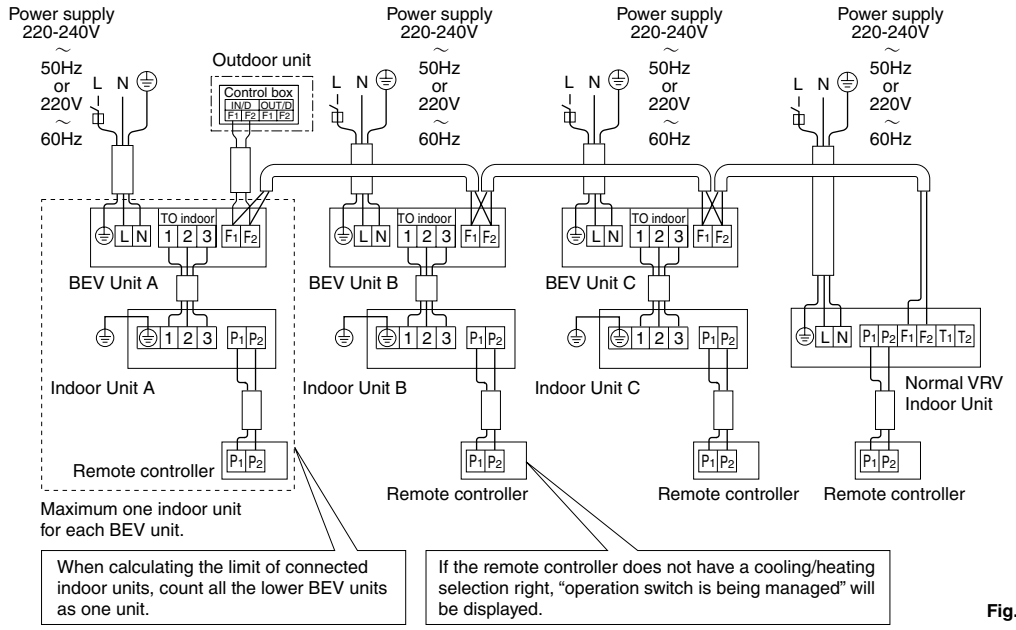

Fig. 18

<Caution>

Group control is not possible between ceiling suspended cassette type units and normal VRV indoor units.

2. For group control or use with 2 remote controllers

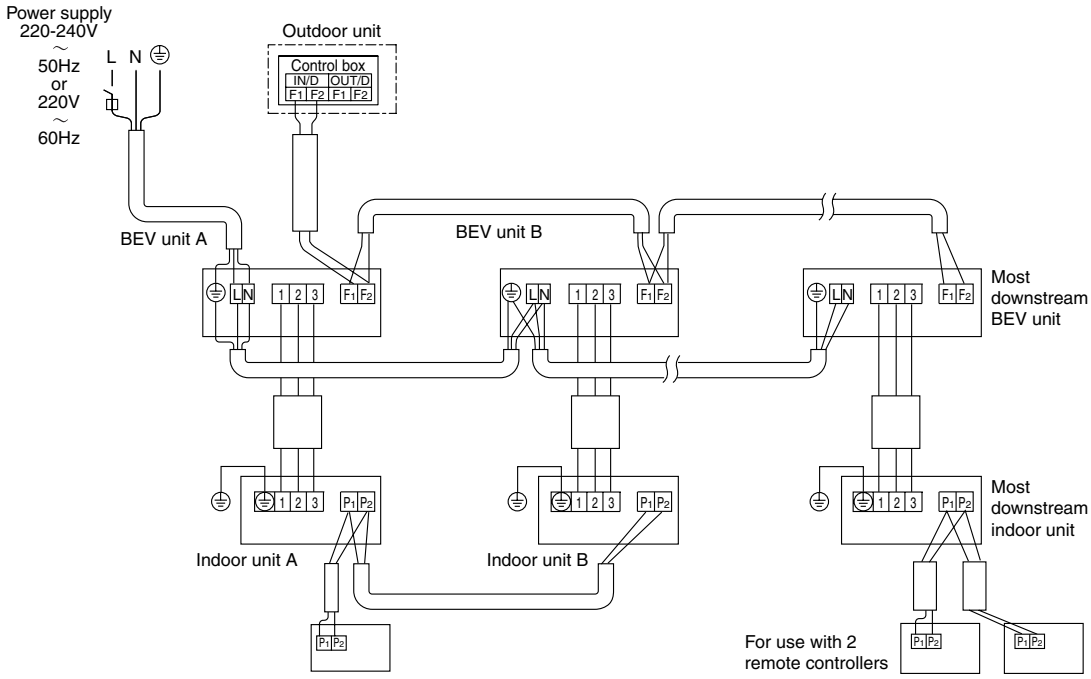

Fig. 19

12

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

3. When including BS unit

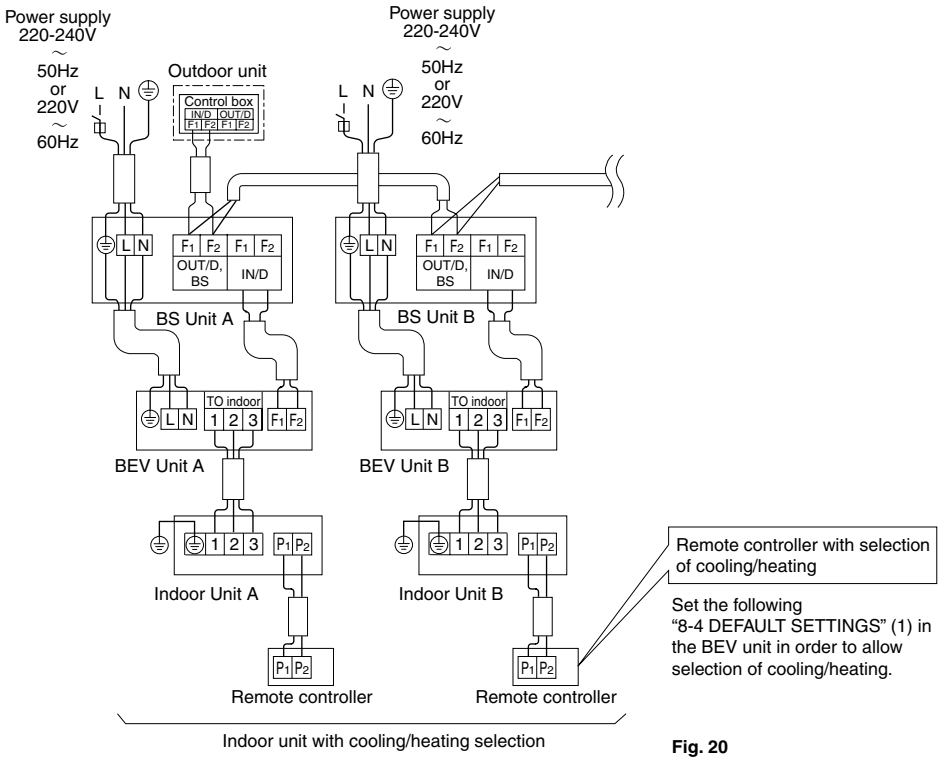

Fig. 20

4. DEFAULT SETTINGS

1. Once piping work is completed, conduct the following settings as needed.

(1) When connecting the BEV unit to the BS unit in the heating/cooling free system, turn the SS1 on the A1P to M (Main) for only one of the BEV units connected to the remote controller on which heating/cooling switching is made possible. **(Refer to Fig. 21)**

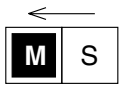

Fig. 21

(2) For BEV unit-only systems
The Cool/Heat SELECTOR is needed.
Refer to the installation manual included with the Cool/Heat SELECTOR for details on how to set it.

2. Once all piping work is done, screw the control box lid shut using the mounting screws.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

11. Accessories

Standard Accessories (Indoor Unit)

Check the following accessories are included with the unit.

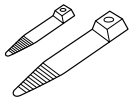

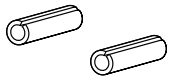

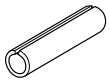

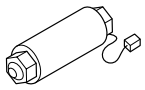

Name	1) Drain hose	2) Metal Clamp	3) Washer for looking hanger	4) Clamp	5) Wahers fixing plate

1. Features

Outdoor-Air Processing Unit

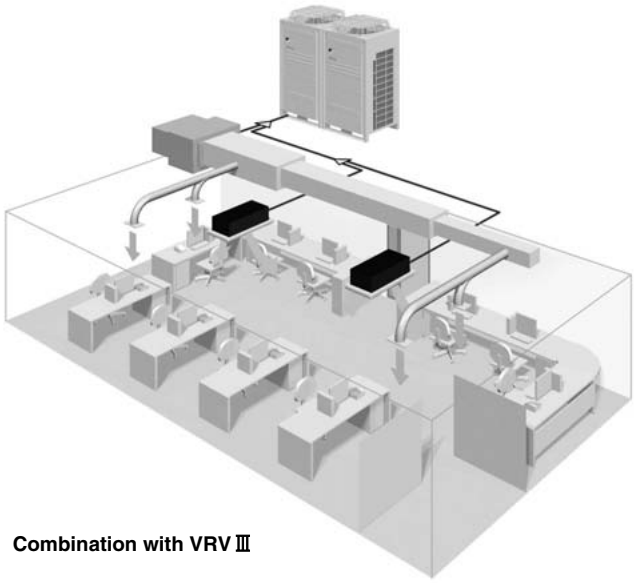

50 Hz only
For outdoor units of 8 HP and above

Combine fresh air treatment and air conditioning, supplied from a single system.

Model Names
FXMQ125MFV1, FXMQ200MFV1, FXMQ250MFV1

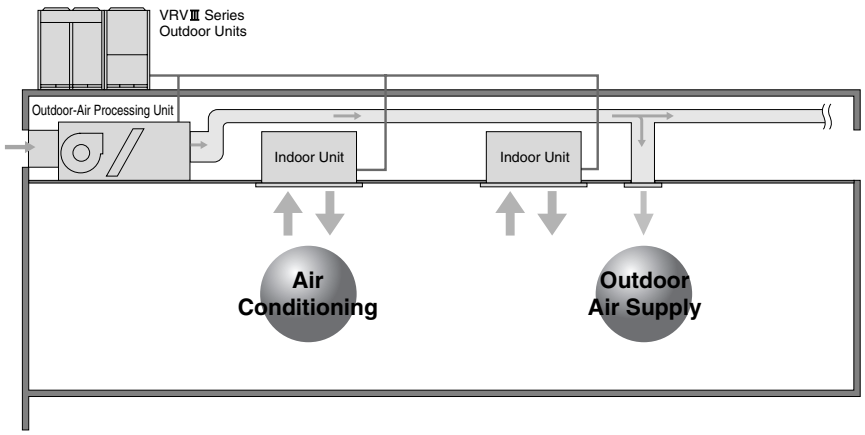

Fresh air treatment and air conditioning can be achieved with a single system by using heat pump technology—without the usual troublesome air supply and air discharge balance design. Fan coil units for air conditioning and an outdoor-air processing unit can be connected to the same refrigerant line. The results are enhanced design flexibility and a significant reduction in total system costs.

Combination with VRV Ⅲ

Air conditioning and outdoor air processing can be accomplished using a single system.

Connection Conditions

The following restrictions must be observed in order to maintain the indoor units connected to the same system.

- When outdoor-air processing units are connected, the total connection capacity must be within 50% to 100% of that of the outdoor units.
- When outdoor-air processing units and standard indoor units are connected, the total connection capacity of the outdoor-air processing units must not exceed 30% of that of the outdoor units.
- Outdoor-air processing units can be used without indoor units.
- Connectable outdoor units: VRV Ⅱ and Ⅲ systems.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

•The unit introduces outdoor air and adjusts the outdoor air temperature via fixed discharge temperature control, thereby reducing the air conditioning load.

* The system can operate with outdoor-air temperatures ranging from -5 to 43˚C. Heating performance is somewhat adversely affected when the outdoor-air temperature is 0˚C or below.
* When shipped from the factory, the thermostat is set at 18˚C for cooling and 25˚C for heating. The set temperature can be varied within the range of 13–25˚C during cooling operation, and 18–30˚C during heating operation, in the local setting mode using the wired remote controller. The temperature, however, is not displayed on the remote controller.
* While in machine protection mode and depending on outdoor air conditions, discharge air temperature may not be at the set temperature.
* The fan stops when operating in defrosting, oil returning and hot start operations. The fan also may stop due to mechanical protection control.

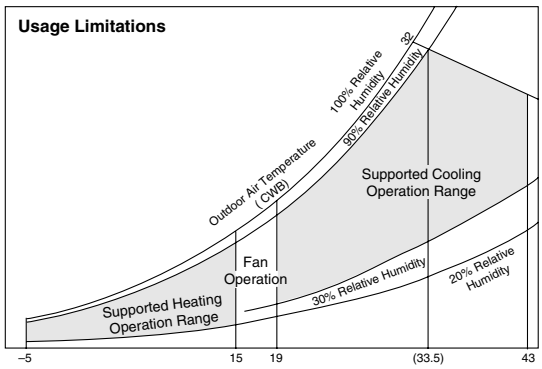

• Ceiling mounted duct units with three differing capacities are available. These can be connected to VRV series outdoor units to meet a variety of different requirements.

Airflow rate

FXMQ125MFV1	1,080 m³/h
FXMQ200MFV1	1,680 m³/h
FXMQ250MFV1	2,100 m³/h

• Optional equipment includes long-life filters.

• Compatible with outdoor temperatures from -5˚C to 43˚C.

Notes
1. The data shown in the graph illustrates the supported operation ranges under the following conditions.
   Indoor and Outdoor Unit
   Effective piping length: 7.5 m
   Height differential: 0 m
2. The discharge temperature can be set using the remote controller. However, the actual temperature may not match the temperature setting under some circumstances due to the outdoor-air processing load or mechanical protection controls.
3. The system will not operate in fan mode when the outdoor air temperature is 5˚C or below.

• High-performance filters with dust collection efficiencies (JIS calorimetry) of 90% and 65% are also available as options.

• As with the VRVⅢ system, a variety of control systems can be deployed, including remote control from distances of up to 500 m.

* Group control is not possible between this unit and standard type indoor units. Connect remote controllers to each unit.

BRC1C62
Wired remote controller
(option)

• The "self-diagnosis function" indicates the occurrence and nature of abnormalities in the system by displaying codes on the remote controller.

• A central control system compatible with the VRVⅢ system can be installed.

* It is not possible to change the discharge air temperature settings from the central control system.
* Do not associate this equipment into zones with standard indoor units, as central control will not be possible.

DCS302CA61
Central remote controller
(option)

• As with the VRVⅢ system, the equipment employs the "super wiring system" so that the wiring linking indoor and outdoor units can also be utilised for central control.

Notes:
* Linked control of the product and the HRV is not supported.
* This equipment is intended for the treatment of outdoor air only. It is not to be used for maintaining indoor air temperature. Install and use with standard indoor units. Be sure to position the air discharge openings of the product in positions where the airflow will not blow on people directly. When outdoor-air processing is in excess, the unit switches to thermo-off mode, and outdoor air flows into the room directly.
* For outdoor ducts, be sure to provide heat insulation to prevent condensation.
* Group control of the product and the standard indoor units is not supported. A separate remote controller should be connected to each individual unit.
* The system will not operate in fan mode when the outdoor air temperature is 5˚C or below.
* If the product is allowed to operate 24 hours a day, maintenance (part replacement, etc.) must be performed periodically.
* Temperature setting and Power Proportional Distribution (PPD) are not possible even if the intelligent Touch Controller or the intelligent Manager III is installed.
* The remote controller wired to the outdoor-air processing unit must not be set as the master remote controller. Otherwise, when set to “Auto,” the operation mode will switch according to the outdoor air conditions, regardless of the indoor temperature.

Notes:

Conversion Formulae
kcal/h=kW×860 Btu/h=kW×3412 cfm=m³/min×35.3

★1. Specifications are based on the following conditions:
- Cooling: Outdoor temp. of 33°CDB, 28°CWB (68% RH). and discharge temp. of 18°CDB
- Equivalent reference piping length: 7.5m (0m Horizontal)
- At 220V

★2. Air intake filter is not supplied, so be sure to install the optional long-life filter or high-efficiency filter.
Please mount it in the duct system of the suction side. Select its colorimetric method (gravity method) 50% or more.

★3. Anechoic chamber conversion value, measured at a point 1.5m downward from the unit center.
These values (measured at 220V) are normally somewhat higher during actual operation as a result of ambient conditions.

★4. Values measured at 220 V.

★5. Within the range that the total capacity of indoor units is 50 to 100%, it is possible to connect to the outdoor unit.

★6. It is not possible to connect to the 5 HP outdoor unit. Not available for Heat Recovery type and VRV III-S series.
- This equipment cannot be incorporated into the remote group control of the VRV III system.

FXMQ250MFV1	47	48

Notes:

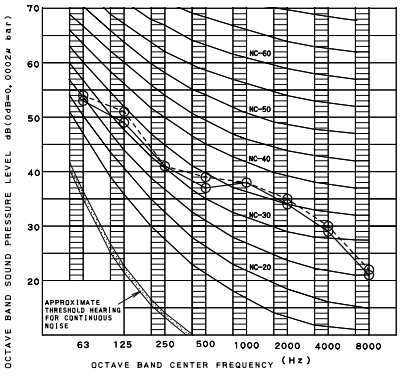

1. The operating conditions are assumed to be standard (JIS conditions)
2. These operating values were obtained in a dead room (conversion values).
   Sound level will vary depending on a range of factors such as the construction (acoustic absorption coefficient) of the particular room in which the equipments installed.

C: 4D046143B

Service Space

Selecting Installation Site

When it may exceed 30°C and RH80% in the ceiling or fresh air is inducted into the ceiling, an additional insulation (Thickness 10mm or more of glass wool or polyethylene form) is required.

1. Select an installation site where the following conditions are fulfilled and that meets with your customer's approval.

- Where is resistible against weight of the unit.
- In the upper space (including the back of the ceiling) of the unit where there is no possible dripping of water from the refrigerant pipe, drain pipe, water pipe, etc.
- Where optimum air distribution can be ensured.
- Where nothing blocks the air passage.
- Where condensate can be properly drained.
- If supporting structural members are not strong enough to take the unit's weight, the unit could fall out of place and cause serious injury.
- Where the false ceiling is not noticeably on an incline.
- Where there is no risk of combustible gas leakage.
- Where sufficient clearance for maintenance and service can be ensured. **(Refer to Fig. 1)**
- Where the total piping length involving indoor unit and outdoor unit is below the allowable piping length. (See the installation manual included with the outdoor unit for "Refrigerant Piping Work")
- Locations where a maintenance hole can be installed. **(Refer to Fig. 2)**

CAUTION

- Install the indoor and outdoor units, power supply wires and transmission wires at least 1 meter away from televisions or radios in order to prevent image interference or noise. (Depending on the radio waves, a distance of 1 meter may not be sufficient enough to eliminate the noise.)

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

2. Use suspension bolts for installation. Check whether the ceiling is strong enough to support the weight of the unit or not. If there is a risk, reinforce the ceiling before installing the unit.

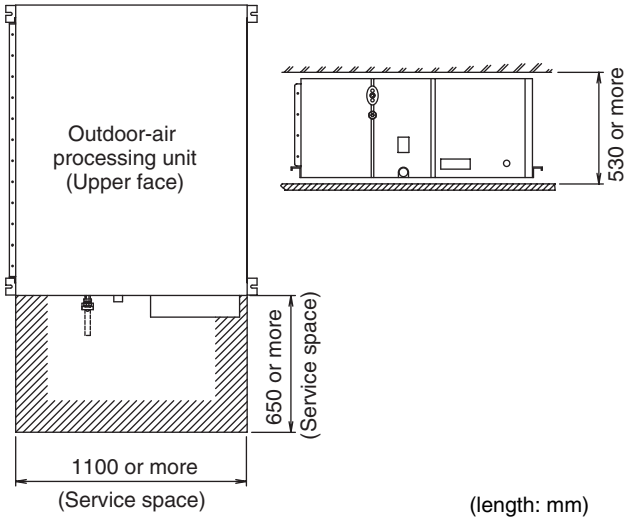

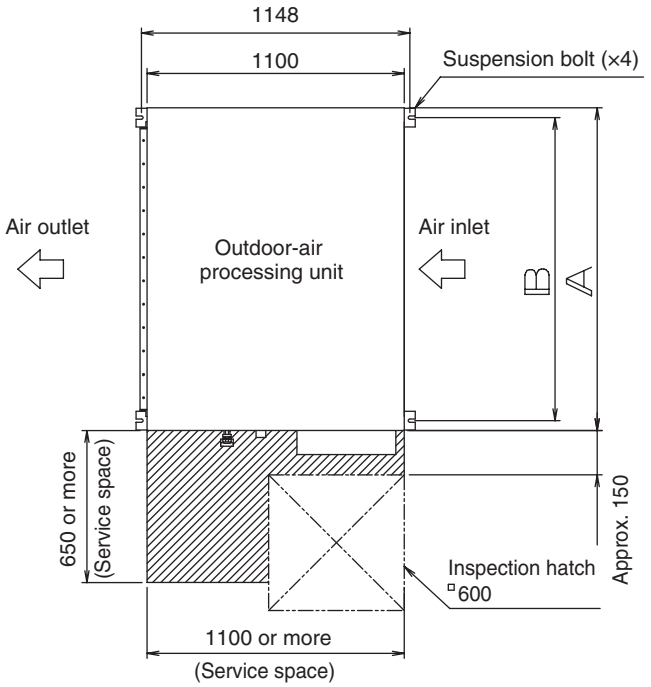

Fig. 1

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Bolt Pitch

Preparations Before Installation

1. Relative positions of the unit and suspension bolt. (Refer to Fig. 2).

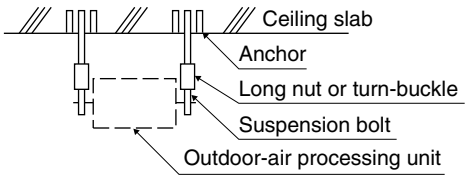

Unit	A	B
FXMQ125MFV1	744	685
FXMQ200·250MFV1	1380	1296

Fig. 2 (length: mm)

2. Install a canvas duct to the air outlet and air inlet so that vibration from the unit isn't transmitted to the duct or ceiling. You should also apply acoustic (insulation material) to the inside of the duct, and vibration insulation rubber to the suspension bolts.
3. Open the installation hole. (Pre-set ceilings)
   - Once the installation hole is opened in the ceiling where the unit is to be installed, pass refrigerant and drain pipe and the power supply, transmission, and remote controller wire to the unit's pipe and wire connection ports.
   - After opening the ceiling hole, it might be necessary to reinforce the ceiling frame to prevent shaking or to maintain the levelness of the ceiling.
     Consult an architect or carpenter for details.
4. Install suspension bolts.
   (Use bolts of 10 mm diameter.)
   - Install the unit where supporting structures are strong enough to bear the unit's weight. Use embedded inserts or anchor bolts with new buildings and hole-in-anchors with old buildings. Adjust the distance to the ceiling beforehand.

〈 Installation example 〉

Note) All the above parts are field supplied.

Fig. 3

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Installation

Unit Installation

Installing optional accessories before installing the unit is easier. See the installation manuals included with the optional accessories.

As for the parts to be used for installation work, be sure to use the provided accessories and specified parts designated by our company.

1. Temporarily install the unit.

■ Mount the hanger brackets to suspension bolts. Secure the hanger brackets on the top and the bottom with nuts <1>~<3> (M10, field supplied) and washers (M10, accessory 9)).

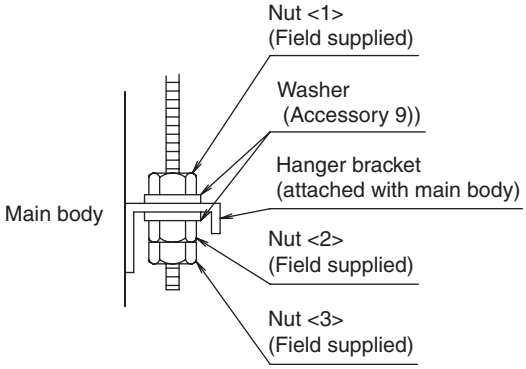

Fig. 4

2. Adjust the height of the unit with the nut <2>.
   (Refer to Fig. 4)
3. Make sure the unit is level.

■ Use a level or a vinyl tube filled with water to make sure that the unit is level and that the tilt (downward slope) to the drain socket and air inlet side is within 1°.
(Refer to Fig. 5)

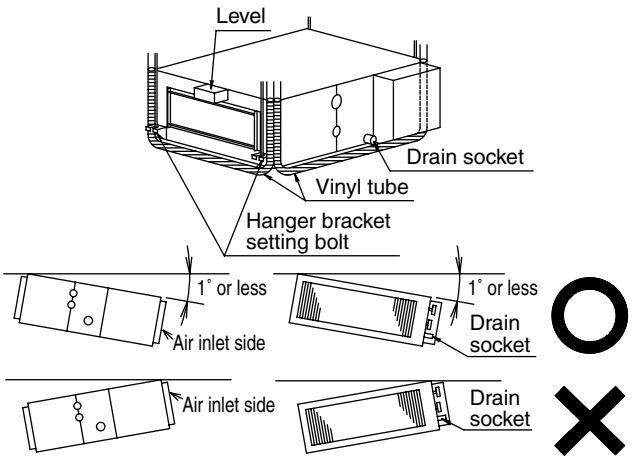

Fig. 5

4. Tighten both upper and lower nuts <1>, <3>.
   (Refer to Fig. 4)
5. Insulate the four hanger brackets with the sealing pad. (accessory 5) Insulate the hanger brackets so that the surface and edges of the hanger brackets cannot be seen. **(Refer to Fig. 6)**

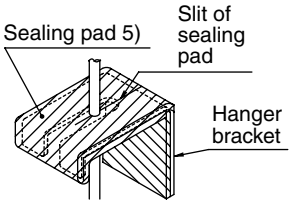

Fig. 6

CAUTION

Setting the unit at an angle opposite to the drain socket or air inlet side might cause leaks.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Refrigerant Piping Work

<For refrigerant piping between outdoor unit and this unit, see the installation manual attached to the outdoor unit. (Refer to Table 1)>
<Execute heat insulation work completely on both sides of the gas pipe and the liquid pipe. Otherwise, a water leakage can result sometimes.>
<When using a heat pump, the temperature of the gas pipe can reach up to approximately 120°C, so use insulation which is sufficiently resistant.>
<Improve the insulation on the refrigerant piping depending on the installation environment. If the insulation is not sufficient, condensate may form on the surface of the insulation.>
<Before refrigerant piping work, check which type of refrigerant is used. Proper operation is not possible if the types of refrigerant are not the same.>

⚠ CAUTION

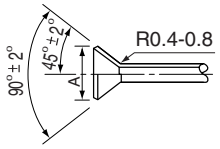

- **Use a pipe cutter and flare suitable for the type of refrigerant.**
- **Apply ester oil or ether oil around the flare portions before connecting. (Refer to Fig. 7)**
- **To prevent dust, moisture or other foreign matter from infiltrating the tube, either pinch the end or cover it with tape.**
- **Do not allow anything other than the designated refrigerant to get mixed into the refrigerant circuit, such as air, etc. If any refrigerant gas leaks while working on the unit, ventilate the room thoroughly right away.**

- The outdoor unit is charged with refrigerant.
- Be sure to use both a spanner and torque wrench together, as shown in the drawing, when connecting or disconnecting pipes to/from the unit. **(Refer to Fig. 8)**
- Refer to Table 2 for the dimensions of flare nut spaces.
- When connecting the flare nut, apply ether oil or ester oil only to inner side of the flare, rotate three or four times first, then screw in. **(Refer to Fig. 7)**
- Refer to Table 2 for tightening torque.

Table 1

Unit to be connected	Gas pipe diameter	Liquid pipe diameter
FXMQ125MFV1	15.9	ϕ9.5
FXMQ200MFV1	19.1 Use attached pipe.	ϕ9.5
FXMQ250MFV1	22.2 Use attached pipe.	ϕ9.5

Table 2

Pipe size	Tightening torque	Flare dimensions A (mm)	Flare shape
ϕ9.5 (3/8")	32.7 – 39.9N·m (333 – 407 kgf·cm)	12.8 – 13.2	
ϕ15.9 (5/8")	61.8 – 75.4N·m (630 – 770 kgf·cm)	19.3 – 19.7	

Note:
Use the flare nuts attached with the unit.

⚠ CAUTION

Over-tightening may damage the flare and cause a refrigerant leakage.

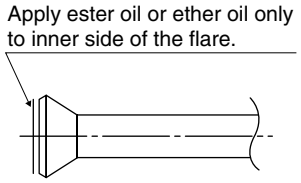

Fig. 7

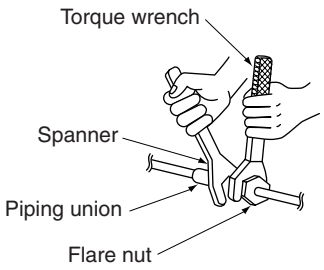

Fig. 8

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Not recommendable but in case of emergency

You must use a torque wrench but if you are obliged to install the unit without a torque wrench, you may follow the installation method mentioned below.

After the work is finished, make sure to check that there is no gas leak.

When you keep on tightening the flare nut with a spanner,
there is a point where the tightening torque suddenly increases. From that position, further tighten the flare nut the angle shown below:

Table 3

Pipe size	Further tightening angle	Recommended arm length of tool
9.5 (3/8")	60 to 90 degrees	Approx. 200mm
15.9 (5/8")	30 to 60 degrees	Approx. 300mm

- After checking the pipe-connection for gas leakage, be sure to insulate the liquid and gas pipe, referring to Fig.9, 10 and the following points.

FXMQ125MFV1

1. Insulate the liquid and gas pipes using the insulation for fitting (Accessory 2), 3))
   (Tighten both edges with clamping material.)
2. Make sure the insulation for fitting (Accessory 3)) on the gas pipe has its seams facing up.
3. For the gas pipe, wrap the sealing pad (Accessory 4)) around the insulation for fitting (Accessory 3)) (flare nut part).

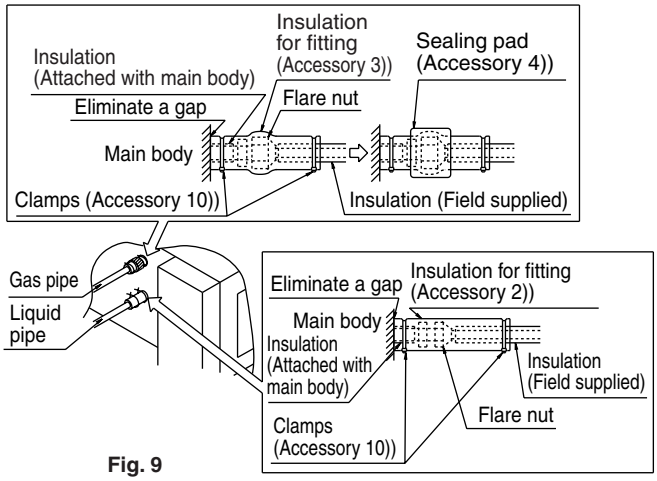

Fig. 9

FXMQ200 · 250MFV1

1. Insulate the liquid pipe using the insulation for fitting (Accessory 2)).
   (Tighten both edges with clamping material.)
2. Use the attached pipe (Accessory 1)) for connecting the gas pipes and make sure to insulate the gas pipes (using field supplied insulation) all the way to the base where they connect to the unit.
3. The turning torque of the hexagon head bolts (Accessory 7)) to connect the attached pipe (Accessory 1)) to the unit is 21.5 – 28.9 N/m.

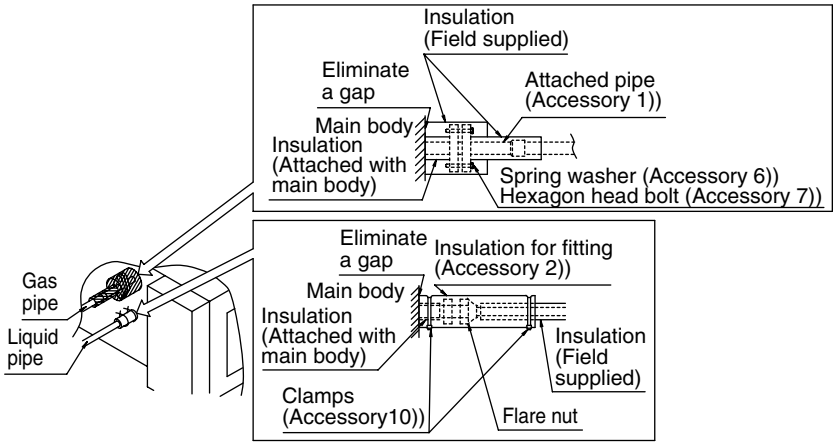

Fig. 10

13

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

⚠ CAUTION

Be sure to insulate any field pipe all the way to the pipe connection inside the unit. Any exposed pipe may cause condensate or burns if touched.

⚠ CAUTION

CAUTION TO BE TAKEN WHEN BRAZING REFRIGERANT PIPING

Do not use flux when brazing refrigerant piping. Therefore, use the phosphor copper brazing filler metal (BCuP-2:JIS Z 3264/B-Cu93P-710/795: ISO 3677) which does not require flux.
(Flux has extremely harmful influence on refrigerant piping systems. For instance, if the chlorine based flux is used, it will cause pipe corrosion or, in particular, if the flux contains fluorine, it will damage the refrigerant oil.)

- Before brazing local refrigerant piping, nitrogen gas shall be blown through the piping to expel air from the piping. If your brazing is done without nitrogen gas blowing, a large amount of oxide film develops inside the piping, and could cause system malfunction.
- When brazing the refrigerant piping, only begin brazing after having carried out nitrogen substitution or while inserting nitrogen into the refrigerant piping. Once this is done, connect the unit with a flared or a flanged connection.
- Nitrogen should be set to 0.02 MPa (0.2 kg/cm^2) with a pressure-reducing valve if brazing while inserting nitrogen into the piping.

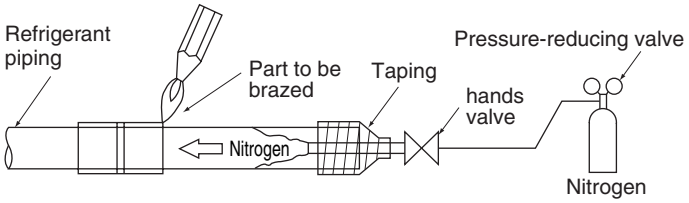

Fig. 11

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Drain Piping Work

<<Rig the drain pipe as shown below and take measures against condensate. Improperly rigged piping could lead to leaks and eventually wet furniture and belongings.>>
<<Insulate the drain pipes inside the building and the drain sockets.>>

1. Carry out the drain piping.

- The drain pipe should be short with a downward slope lower than 1/100 and should prevent air pockets from forming.
- The diameter of the pipe is the same as that of the connecting pipe (PS1B), and should be kept equal to or greater than that of the connecting pipe.

Note:

- If converging multiple drain pipes, install according to the procedure shown below. (Select an appropriate central drain pipe thickness for the units they will be connected to.)

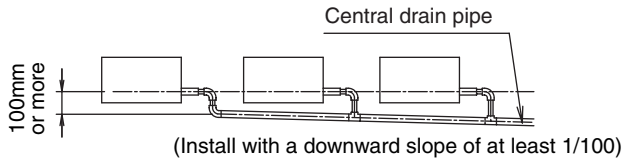

Fig. 12

2. After piping work is finished, check drainage flow smoothly.

- Open the water supply port, add approximately 1 litter of water slowly into the drain pan and check drainage flow. **(Refer to Fig. 13)**
  Pools of drainage can cause the drain pipes to clog.

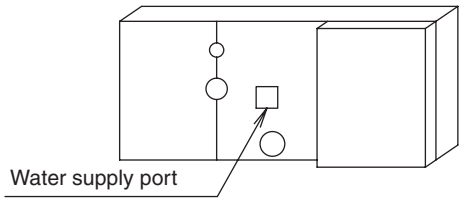

Fig. 13

CAUTION

- Do not connect the drain pipe directly to sewage pipes that smell of ammonia. The ammonia in the sewage might enter the unit through the drain pipes and corrode the heat exchanger.

13

Electric Wiring Work

GENERAL INSTRUCTIONS

- All field supplied parts and materials and electric works must conform to local codes.
- Use copper wire only.
- For electric wiring work, refer to also “WIRING DIAGRAM” label attached to the electric parts box lid.
- For remote controller wiring details, refer to the installation manual attached to the remote controller.
- All wiring must be performed by an authorized electrician.
- This system consists of multiple indoor units. Mark each indoor unit as unit A, unit B..., and be sure the terminal board wiring to the outdoor unit is properly matched. If wiring and piping between the outdoor unit and the indoor unit are mismatched, the system may cause a malfunction.
- A circuit breaker capable of shutting down power supply to the entire system must be installed.
- Refer to the installation manual attached to the outdoor unit for the size of power supply wire connected to the outdoor unit, the capacity of the circuit breaker and switch, and wire instructions.
- Be sure to ground the unit.
- Do not connect the ground wire to gas and water pipes, lightning rods, or telephone ground wires.
  - Gas pipes : might cause explosions or fire if gas leaks.
  - Water pipes : no grounding effect if hard vinyl piping is used.
  - Telephone ground wires or lightning rods : might cause abnormally high electric potential in the ground during lightning.

FXMQ200MFV1				3.3	15	0.380	2.6
FXMQ250MFV1				3.8	15	0.380	3.0

MCA: Min. Circuit Amps (A); MFA: Max. Fuse Amps (A)

KW: Fan Motor Rated Output (kW); FLA: Full Load Amps (A)

SPECIFICATIONS FOR FIELD SUPPLIED FUSES AND WIRE

Model	Power supply wiring			Transmission wiring	
	Field fuses	Wire	Size	Wire	Size
FXMQ125MFV1	15A	H05VV-U3G	Size must comply with local codes.	Sheathed wire (2 wire)	0.75 - 1.25 mm²
FXMQ200MFV1					
FXMQ250MFV1					

NOTES

1. Select the particular size of electrical wire for power supply wire in accordance with the standards of the given nation and region.
2. Allowable length of transmission wire between indoor/out-door units and between the indoor unit and the remote con-troller is as follows.
   (1) Outdoor unit – Indoor unit:
   Max. 1000 m (Total wiring length: 2000 m)
   (2) Indoor unit – Remote controller:
   Max. 500 m
   (3) Max. branches No. of branches :16
3. Insulated thickness: 1mm or more
4. Up to 16 branches are possible for unit-to unit cabling. No branch is allowed after first branch. **(Refer to Fig. 15)**

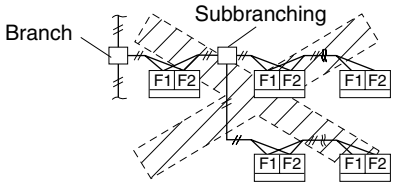

Fig. 15

Wiring Example And How To Set The Remote Controller

HOW TO CONNECT WIRINGS (Remove the electric parts box lid and wire as shown in the figure below.)

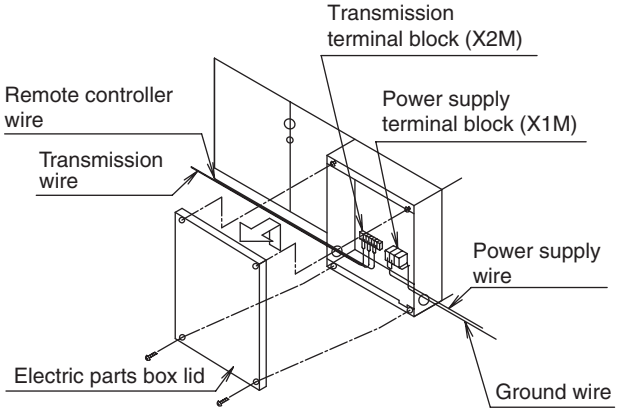

Fig. 16

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

- **Power supply wire, Ground wire (Refer to Fig. 17)**
  Connect the wire to L and N on the power supply terminal block (X1M). Also, connect the ground wire to the ground terminal. Take the power supply wire and the ground wire into the unit through the wiring through hole <1>, and firmly secure them together using the clamp (Accessory 10)).
- **Transmission wire, Remote controller wire (Refer to Fig. 17)**
  Connect the transmission wire to F1 and F2 on the transmission terminal block (X2M). Connect the remote controller wire to P1 and P2 on the transmission terminal block (X2M). Take them into the unit through the wiring through hole <2>, and firmly secure the wires using the clamp (Accessory 10)).

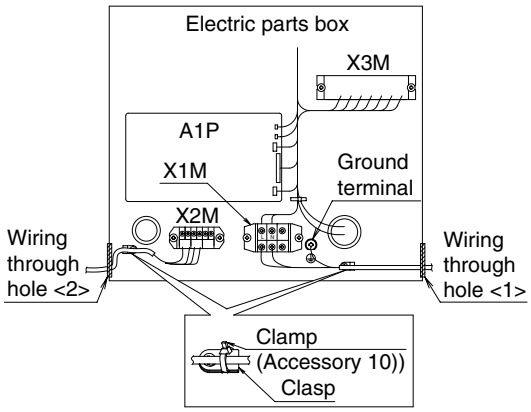

Fig. 17

CAUTION

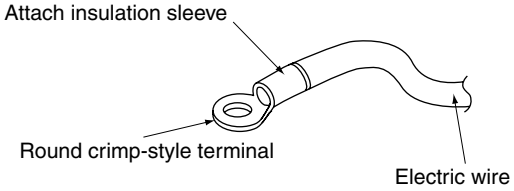

- Wire the electric parts box so that the wiring is at least 10 mm above the bottom of the electric parts box.
- Be sure to attach the sealing material or putty (field supplied) to the wiring through holes to prevent the infiltration of water as well as any insects and other small creatures from outside. Other-wise a short-circuit may occur inside the electric parts box.
- When clamping the wires, be sure no pressure is applied to the wire connections by using the included clamping material to make appropriate clamps. Also, when wiring, make sure the lid on the electric parts box fits snugly by arranging the wires neatly and attaching the electric parts box lid firmly. When attaching the electric parts box lid, make sure no wires get caught in the edges. Pass wire through the wiring through holes to prevent damage to them.
- Make sure the remote controller wire, the transmission wire and power supply wire, ground wire do not pass through the same locations outside of the unit, separating them by at least 50mm, otherwise electrical noise (external static) could cause mistaken operation or breakage.

13

PRECAUTIONS

1. Use round crimp-style terminals for connecting wires to the power supply terminal block. If unavailable, observe the following points when wiring.

- Do not connect wires of different gauge to the same power supply terminal. (Looseness in the connection may cause overheating.)
- Use the specified electric wire. Connect the wire securely to the terminal. Lock the wire down without applying excessive force to the terminal.

2. Tightening torque for the terminal screws.

- Use the correct screwdriver for tightening the terminal screws. If the blade of screwdriver is too small, the head of the screw might be damaged, and the screw will not be properly tightened.
- If the terminal screws are tightened too hard, screws might be damaged.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

■ Refer to the table below for the tightening torque of the terminal screws.

Terminal	Size	Tightening torque
Transmission terminal block (X2M)	M3.5	0.79 – 0.97 N·m
Power supply terminal block (X1M)	M4	1.18 – 1.44 N·m
Ground terminal	M5	3.02 – 4.08 N·m

3. Do not connect wires of different gauge to the same ground terminal. Looseness in the connection may deteriorate protection.
4. Outside of the unit, keep transmission wire and remote controller wire at least 50 mm away from power supply wire and ground wire. The unit may malfunction if subjected to electrical noise (external static).
5. For remote controller wiring, refer to the “INSTALLATION MANUAL OF REMOTE CONTROLLER” attached to the remote controller.
6. Never connect power supply wire to the transmission terminal block (X2M). A mistake of the sort could damage the entire system.
7. Use only specified wire and tightly connect wires to terminals. Be careful wires do not place external stress on terminals. Keep wiring in neat order and so as not to obstruct other equipment such as the electric parts box lid. Make sure the lid closes tight. Incomplete connections could result in overheating, and in worse case, electric shock or fire.

WIRING EXAMPLE

Fit the power supply wiring of each unit with a switch and fuse as shown in the drawing.

COMPLETE SYSTEM EXAMPLE (3 SYSTEMS)

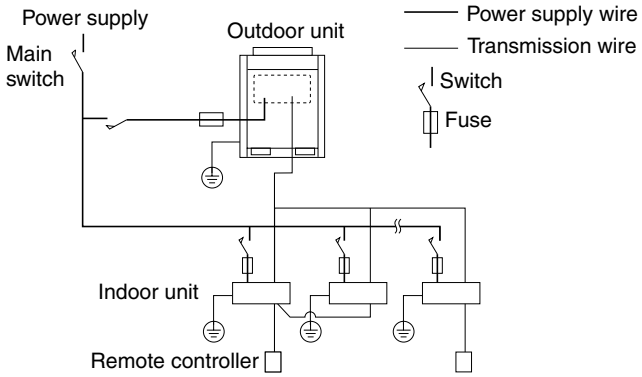

Fig. 18

1. When using 1 remote controller for 1 indoor unit. (Normal operation)

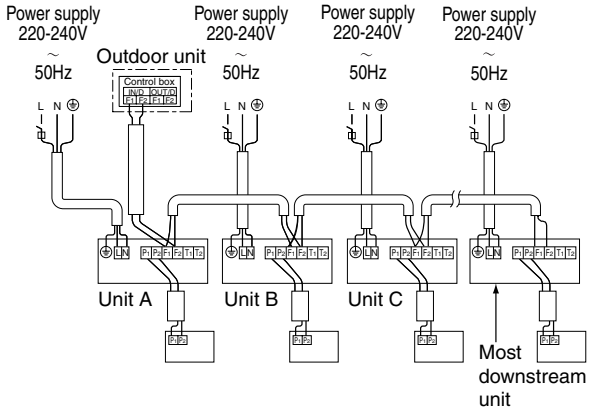

Fig. 19

2. For group control or control by 2 remote controllers

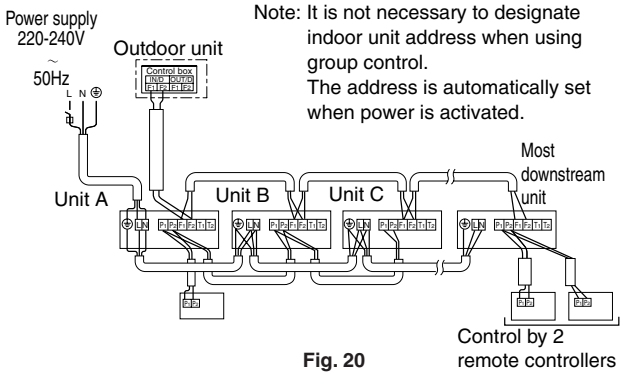

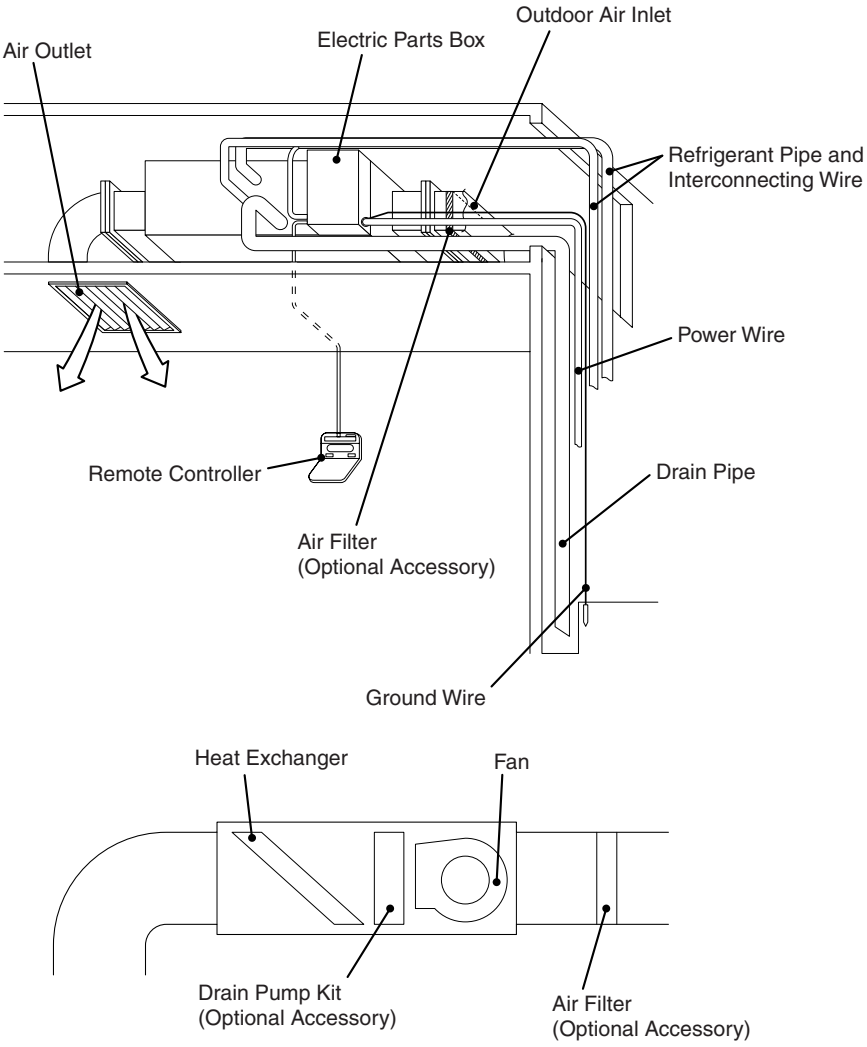

Fig. 20

[PRECAUTIONS]

1. A single switch can be used to supply power to units on the same system. However, branch switches and branch circuit breakers must be selected carefully.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

Name of Each Part

3P086155-6G-3

13

Operation Range

Use the system in the following temperature and humidity ranges for safe and effective operation.

COOLING [°C]

OUTDOOR TEMPERATURE		
TEMPERATURE		HUMIDITY
DB	19 to 43 (Notes)	30% to 90% Long time operation in a humidity over 90% may cause condensation on the unit and dripping.
WB	32 or below	

DB: Dry Bulb Temperature
WB: Wet Bulb Temperature

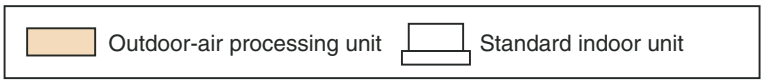

Notes:

- The FAN OPERATION mode is set automatically for DB temperatures of 19°C and below.
- Do not use the COOLING OPERATION or FAN OPERATION modes when outdoor temperature is 5°C or lower. The unit will stop running to protect itself against cold damage. In such case, set the AUTOMATIC OPERATION or HEATING OPERATION mode.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html

If the temperature or the humidity is beyond these conditions, safety devices may work and the air conditioner may not operate.

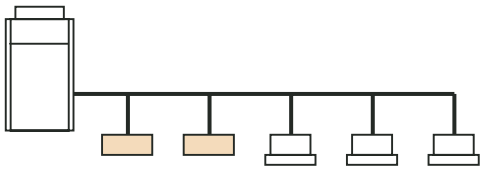

■ Restrictions in case of mixture connection with standard indoor units

1. Restrictions of the refrigerant piping system

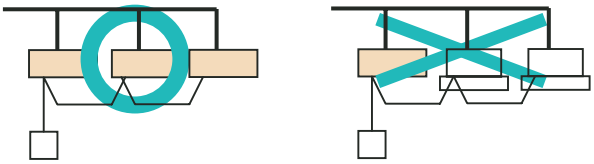

1) The total capacity of standard indoor units + Outdoor-air processing units should be **50-100%** of Outdoor unit capacity. (In case of using only outdoor-air processing units, it is same.)

2) The capacity of outdoor-air processing units should be less than **30%** of the outdoor unit capacity.

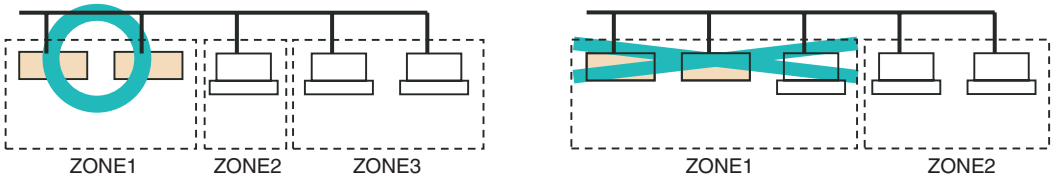

2. Restrictions of the control system

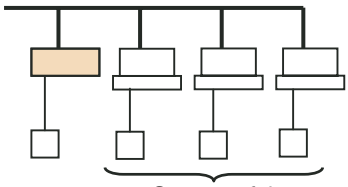

1) In case of wiring is mixed with standard indoor units, group control by remote controller is not available, because the setting temperature are different.

2) When using the central remote controller, mixture of indoor units & Outdoor-air Processing units in the same zone is not available, because the setting temperature are different.

3) Don't set the R/C of Outdoor-air processing unit as the master remote controller.

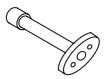

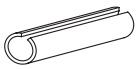

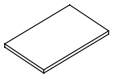

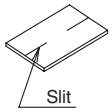

Set one of these remote controllers as the master remote controller.

Все каталоги и инструкции здесь: https://splitsystema48.ru/instrukcii-po-ekspluatacii-kondicionerov.html
