# 1 Features

- Easy to install 'plug and play' concept plus single installation configuration; no additional piping is required since indoor and outdoor sides are pre-connected
- High efficiency and reliable scroll compressor
- Wide operating range
- Flat top unit design allows maximum use of warehouse and container space
- Free cooling and fresh air intake possible with optional economiser
- Convertible return and supply air: fan can be mounted in two directions
- Factory pre-charged refrigerant ensures clean and efficient operation
- Belt driven fan enables air volume and static pressure to be adjusted as required.
- Adjustable fan pulley as standard to meet a wide range of supply air volumes and external static pressures
- Anti-corrosion treated coil

1

## 2 Specifications

2-1 Technical Specifications				UATYQ250CY1	UATYQ350CY1	UATYQ450CY1	UATYQ550CY1	UATYQ600CY1	UATYQ700CY1		
Cooling capacity	Nom.	kW		27.340 (3)	35.580 (3)	44.720 (3)	55,690.000 (3)	66.820 (3)	72.600 (3)

### Notes

- (1) All specifications are subjected to change by the manufacturer without prior notice.
- (2) All units are being tested and comply to ISO5151.
- (3) Cooling: indoor temp. 27°CDB, 19°CWB; outdoor temp. 35°CDB, 24°CWB
- (4) Heating: indoor temp. 20°CDB; outdoor temp. 7°CDB, 6°CWB
- (5) Sound pressure levels are measured according to JIS B 8616 standard
- (6) All performance calculations are strictly according to Eurovent standard

### 3 Nomenclature

#### 3 - 1 Nomenclature

Remarks: Economizers & CO2 sensor will be ready soon.

## 6 Selection procedure

### 6 - 1 Selection Procedure

6

#### Calculation Steps

Interpolation method can be used to get the total capacity, TC and sensible capacity, SC and power input, PI at those temperatures which are not stated out in the table. Extrapolation method are not allowed to be used to get the TC, SC and PI.

#### Example:

**Model:** UATYQ450BY1

**Indoor Condition:** 25°C DB, 17°C WB

**Outdoor Condition:** 37°C DB

**Fan Speed:** High (5650CFM)

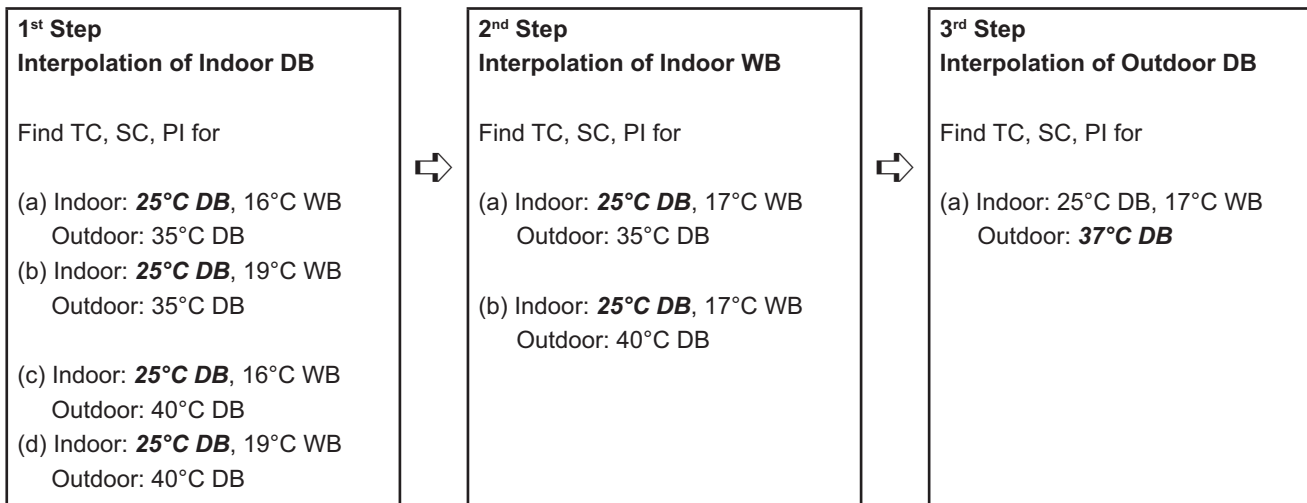

#### Solution:

#### Overall

Based on the Performance Table

1. Refer to the Indoor DB column,
  - 25°C is located between 24°C and 27°C for 16°CWB (Thus, Interpolation need to be applied)
  - 25°C is located between 24°C and 27°C for 19°CWB (Thus, Interpolation need to be applied)
2. Refer to the Indoor WB column,
  - 17°C is located between 16°CWB and 19°CWB for 25°CDB (Thus, Interpolation need to be applied)
3. Refer to the Outdoor DB column,
  - 37°C is located between 35°C and 40°C. (Thus, Interpolation need to be applied)

Please follow the steps below in order to get the required capacity.

## 6 Selection procedure

### 6 - 1 Selection Procedure

**Details:**

**1<sup>st</sup> Step:**

To obtain the Total capacity and Sensible capacity and Power input for

**(a) Indoor Condition: 25°C DB, 16°C WB**

**Outdoor Condition: 35°C DB**

Indoor WB °C	Indoor DB °C	Outdoor DB, °C			
		35			
		TC (kW)	SHC (kW)	PI (kW)	
16					
	24		41.41	35.59	12.81
	25	.....	X <sub>1</sub>	Y <sub>1</sub>	Z <sub>1</sub>
	27		43.48	41.63	12.94

Total capacity, TC

Interpolation Method:

$$\Rightarrow \frac{27^\circ \text{C} - 24^\circ \text{C}}{27^\circ \text{C} - 25^\circ \text{C}} = \frac{43.48\text{kW} - 41.41\text{kW}}{43.48\text{kW} - x_1\text{kW}}$$

$$\Rightarrow x_1 = 42.10\text{kW}$$

Sensible capacity, SHC

Interpolation Method:

$$\Rightarrow \frac{27^\circ \text{C} - 24^\circ \text{C}}{27^\circ \text{C} - 25^\circ \text{C}} = \frac{41.63\text{kW} - 35.59\text{kW}}{43.48\text{kW} - x_1\text{kW}}$$

$$\Rightarrow y_1 = 37.60\text{kW}$$

Power Input, PI

Interpolation Method:

$$\Rightarrow \frac{27^\circ \text{C} - 24^\circ \text{C}}{27^\circ \text{C} - 25^\circ \text{C}} = \frac{12.94\text{kW} - 12.81\text{kW}}{12.94\text{kW} - z_1\text{kW}}$$

$$\Rightarrow z_1 = 12.85\text{kW}$$

## 6 Selection procedure

### 6 - 1 Selection Procedure

6

**(b) Indoor Condition: 25°C DB, 16°C WB**

**Outdoor Condition: 40°C DB**

Indoor WB °C	Indoor DB °C	Outdoor DB, °C			
		40			
		TC (kW)	SHC (kW)	PI (kW)	
16	24	38.59	33.52	13.91	
	25	.....	$X_2$	$Y_2$	$Z_2$
	27	40.74	39.20	14.06	

Total capacity, TC

Interpolation Method:

$$\Rightarrow \frac{27^\circ\text{C} - 24^\circ\text{C}}{27^\circ\text{C} - 25^\circ\text{C}} = \frac{43.48\text{kW} - 41.41\text{kW}}{40.74\text{kW} - x_2\text{kW}}$$

$$\Rightarrow x_2 = 39.31\text{kW}$$

Sensible capacity, SHC

Interpolation Method:

$$\Rightarrow \frac{27^\circ\text{C} - 24^\circ\text{C}}{27^\circ\text{C} - 25^\circ\text{C}} = \frac{39.20\text{kW} - 33.52\text{kW}}{39.20\text{kW} - y_2\text{kW}}$$

$$\Rightarrow y_2 = 35.41\text{kW}$$

Power Input, PI

Interpolation Method:

$$\Rightarrow \frac{27^\circ\text{C} - 24^\circ\text{C}}{27^\circ\text{C} - 25^\circ\text{C}} = \frac{14.06\text{kW} - 13.91\text{kW}}{14.06\text{kW} - z_2\text{kW}}$$

$$\Rightarrow z_2 = 13.96\text{kW}$$

\* Repeat process (a) and (b) in 1st step for the condition below:

**(c) Indoor Condition: 25°C DB, 19°C WB**

**Outdoor Condition: 35°C DB**

$$\Rightarrow x_3 = 44.55\text{kW}$$

$$\Rightarrow y_3 = 31.63\text{kW}$$

$$\Rightarrow z_3 = 13.03\text{kW}$$

**(c) Indoor Condition: 25°C DB, 19°C WB**

**Outdoor Condition: 40°C DB**

$$\Rightarrow x_4 = 41.46\text{kW}$$

$$\Rightarrow y_4 = 31.63\text{kW}$$

$$\Rightarrow z_4 = 14.13\text{kW}$$

## 6 Selection procedure

### 6 - 1 Selection Procedure

**2<sup>nd</sup> Step:**

To obtain the Total capacity, Sensible capacity and Power Input for

**(a) Indoor Condition: 25°C DB, 17°C WB**

**Outdoor Condition: 35°C DB**

Indoor WB °C	Indoor DB °C	Outdoor DB, °C		
		35		
		TC (kW)	SHC (kW)	PI (kW)
		⋮	⋮	
16	25	42.10	37.60	12.85
17		X <sub>5</sub>	Y <sub>5</sub>	Z <sub>5</sub>
19		44.55	31.63	13.03

Total capacity, TC

Interpolation Method:

$$\Rightarrow \frac{19^\circ\text{C} - 16^\circ\text{C}}{19^\circ\text{C} - 17^\circ\text{C}} = \frac{44.55\text{kW} - 42.10\text{kW}}{44.55\text{kW} - x_5\text{kW}}$$

$$\Rightarrow x_5 = 42.92\text{kW}$$

Sensible capacity, SHC

Interpolation Method:

$$\Rightarrow \frac{19^\circ\text{C} - 16^\circ\text{C}}{19^\circ\text{C} - 17^\circ\text{C}} = \frac{31.63\text{kW} - 37.60\text{kW}}{31.63\text{kW} - y_5\text{kW}}$$

$$\Rightarrow y_5 = 35.61\text{kW}$$

Power Input, PI

Interpolation Method:

$$\Rightarrow \frac{19^\circ\text{C} - 16^\circ\text{C}}{19^\circ\text{C} - 17^\circ\text{C}} = \frac{13.03\text{kW} - 12.85\text{kW}}{13.03\text{kW} - z_5\text{kW}}$$

$$\Rightarrow z_5 = 12.91\text{kW}$$

## 6 Selection procedure

### 6 - 1 Selection Procedure

6

(b) Indoor Condition: 25°C DB, 17°C WB

Outdoor Condition: 40°C DB

Indoor WB °C	Indoor DB °C	Outdoor DB, °C			
		40			
		TC (kW)	SHC (kW)	PI (kW)	
		⋮	⋮		
16	25	39.31	35.41	13.96	
17		.....	X <sub>6</sub>	Y <sub>6</sub>	Z <sub>6</sub>
19			41.46	29.99	14.13

Total capacity, TC

Interpolation Method:

$$\Rightarrow \frac{19^\circ\text{C} - 16^\circ\text{C}}{19^\circ\text{C} - 17^\circ\text{C}} = \frac{41.46\text{kW} - 39.31\text{kW}}{41.46\text{kW} - x_6\text{kW}}$$

$$\Rightarrow x_6 = 40.03\text{kW}$$

Sensible capacity, SHC

Interpolation Method:

$$\Rightarrow \frac{19^\circ\text{C} - 16^\circ\text{C}}{19^\circ\text{C} - 17^\circ\text{C}} = \frac{29.99\text{kW} - 35.41\text{kW}}{29.99\text{kW} - y_6\text{kW}}$$

$$\Rightarrow y_6 = 33.60\text{kW}$$

Power Input, PI

Interpolation Method:

$$\Rightarrow \frac{19^\circ\text{C} - 16^\circ\text{C}}{19^\circ\text{C} - 17^\circ\text{C}} = \frac{14.13\text{kW} - 13.96\text{kW}}{14.13\text{kW} - z_6\text{kW}}$$

$$\Rightarrow z_6 = 14.02\text{kW}$$

## 6 Selection procedure

### 6 - 1 Selection Procedure

#### 3<sup>rd</sup> Step:

To obtain the Total capacity and Sensible capacity for

(a) **Indoor Condition:** 25°C DB, 17°C WB

**Outdoor Condition:** 37°C DB

Indoor WB °C	Indoor DB °C	Outdoor DB, °C									
		35			35			40			
		TC (kW)	SHC (kW)	PI (kW)	TC (kW)	SHC (kW)	PI (kW)	TC (kW)	SHC (kW)	PI (kW)	
25	17	.....	42.92	35.61	12.61	x	y	z	40.03	33.60	14.02

#### Total capacity, TC

Interpolation Method:

$$\Rightarrow \frac{40^\circ\text{C} - 35^\circ\text{C}}{40^\circ\text{C} - 37^\circ\text{C}} = \frac{40.03\text{kW} - 42.92\text{kW}}{40.03\text{kW} - x\text{kW}}$$

$$\Rightarrow x = 41.76\text{kW}$$

#### Sensible capacity, SHC

Interpolation Method:

$$\Rightarrow \frac{40^\circ\text{C} - 35^\circ\text{C}}{40^\circ\text{C} - 37^\circ\text{C}} = \frac{33.60\text{kW} - 35.61\text{kW}}{33.60\text{kW} - y\text{kW}}$$

$$\Rightarrow y = 34.81\text{kW}$$

#### Power Input, PI

Interpolation Method:

$$\Rightarrow \frac{40^\circ\text{C} - 35^\circ\text{C}}{40^\circ\text{C} - 37^\circ\text{C}} = \frac{14.02\text{kW} - 12.91\text{kW}}{14.02\text{kW} - z\text{kW}}$$

$$\Rightarrow z = 13.35\text{kW}$$

### NOTES - ANMERKUNGEN - ΣΗΜΕΙΩΣΕΙΣ - NOTAS - REMARQUES - NOTE - OPMERKINGEN - ПРИМЕЧАНИЯ - NOTLAR

- Ratings shown are gross capacities which do not include a deduction for indoor fan motor heat. - Die Nennwerte sind Bruttoleistungen, die keine Abzüge für die Motorwärme der Innenventilatoren enthalten. - Οι τιμές που αναφέρονται αντιπροσωπεύουν μικτή απόδοση, χωρίς κάποια μικρή απόκλιση που αντιστοιχεί στη θέρμανση του κινητήρα του ανεμιστήρα της εσωτερικής μονάδας. - Los valores indicados son capacidades brutas a las que no se ha restado el valor correspondiente al calor del motor del ventilador interior. - Les valeurs nominales indiquées correspondent à des puissances brutes qui n'incluent aucune déduction pour la chaleur du moteur de ventilateur de l'unité intérieure. - I valori indicati si riferiscono alle capacità lorde e non comprendono la riduzione per l'apporto di calore generato dal motore del ventilatore dell'unità interna. - De weergegeven cijfers zijn brutocapaciteiten excl. reductiefactor voor warmte afgegeven door de binnenventilator. - Указанные номинальные значения являются общими, т.е. не учитывают нагревание от двигателя внутреннего вентилятора. - Gösterilen değerler, iç ünite fan motoru sıcaklığının dikkate alınmadığı brüt kapasite değerleridir.
- shows nominal capacities. - stellt Nennleistungen dar. - υποδεικνύει ονομαστικές τιμές απόδοσης. - indica capacidades nominales. - indique les puissances nominales. - mostra le capacità nominali. - geeft nominale capaciteiten weer. - показывает номинальные значения мощности. - nominal kapasite değerlerini gösterir.
- Direct interpolation is permissible. Do not extrapolate. - Direkte Interpolation ist zulässig. Extrapolieren ist nicht zulässig. - Επιτρέπεται η απευθείας παρεμβολή. Οχι όμως η παρεκβολή. - Se permite la interpolación directa. Sin embargo, no extrapole. - Interpolation directe autorisée. Ne pas extrapoler. - È consentita l'interpolazione diretta. Non è tuttavia permessa l'estrapolazione. - Directe interpolatie is toegestaan. Extrapoler niet. - Допускается прямая интерполяция. Экстраполяция не допускается. - Doğrudan interpolasyon yapılmazına izin verilir. Ekstrapolasyon yapılmaz.
- Unit is able to operate at ambient from 0°C to 46°C without pressure trip. - Gerät kann bei Umgebungstemperaturen von 0°C bis 46°C ohne Druckabfall betrieben werden. - Η μονάδα έχει τη δυνατότητα να λειτουργεί σε θερμοκρασία περιβάλλοντος από 0°C έως 46°C χωρίς πτώση πίεσης. - La unidad puede funcionar con temperaturas ambiente de entre 0 y 46°C sin cortes por presión. - L'unité est en mesure de fonctionner par température extérieure comprise entre 0 °C et 46 °C sans déclenchement pression. - L'unità è in grado di funzionare con temperature esterne comprese tra 0° e 46° senza cali di pressione. - De unit kan werken bij omgevingstemperaturen van 0°C tot 46°C zonder drukschakeling. - Блок может работать при температуре окружающей среды от 0 до 46°C без отключения, вызываемого давлением. - Ünite, 0°C ila 46°C ortam sıcaklığında basınç problemi olmadan çalışabilir.

### REMARK - BEMERKUNGEN - ΠΑΡΑΤΗΡΗΣΕΙΣ - OBSERVACIONES - REMARQUES - NOTE - OPMERKINGEN - ЗΑΜΕΧΑΝΙΑ - DÜŞÜNCELER

- AFR: Air flow rate - Luftdurchsatz - Ταχύτητα ροής αέρα - Caudal de aire - Débit d'air - Portata d'aria - Luchtdebit - Скорость воздушного потока - Hava akış hızı (CFM)
- EWB: Entering Wet Bulb Temp. - Eingangs-Feuchtemp. - Είσοδος σε θερμ. υγρού βολβού - Temperatura de bulbo húmedo de entrada - Température d'entrée du réservoir humide - Temp. bulbo umido in entrata - Temperatuur ingaand natte bol - Температура на входе влажного термометра. - Giriş ıslak hazne sıcaklığı (°C)
- EDB: Entering Dry Bulb Temp. - Eingangs-Trockentemp. - Είσοδος σε θερμ. λυχνίας αφύγρανσης - Temperatura de bulbo seco de entrada - Température d'entrée du réservoir sec - Temp. bulbo secco in entrata - Temperatuur ingaand droge bol - Температура на входе сухого термометра. - Giriş kuru hazne sıcaklığı (°C)
- TC: Total Cooling Capacity - Gesamte Kühlleistung - Συνολική απόδοση ψύξης - Capacidad de refrigeración total - Puissance totale de refroidissement - Capacità di raffreddamento totale - Totaal koelvermogen - Общая охлаждающая способность - Toplam soğutma kapasitesi (kW)
- SHC: Sensible Heat Capacity - Sensible Wärmekapazität - Απόδοση αισθητής θέρμανσης - Capacidad de calor sensible - Puissance calorifique sensible - Capacità termica sensible - Voelbaar verwarmingsvermogen - Производительность по сухому теплу - Hissedilebilir ısı kapasitesi (kW)
- PI: Power Input - Leistungsaufnahme - Είσοδος ισχύος - Consumo - Puissance absorbée - Potenza assorbita - Vermogeninput - Потребляемая мощность - Güç girişi

**NOTES - ANMERKUNGEN - ΣΗΜΕΙΩΣΕΙΣ - NOTAS - REMARQUES - NOTE - OPMERKINGEN - ПРИМЕЧАНИЯ - NOTLAR**

- Ratings shown are gross capacities which do not include a deduction for indoor fan motor heat. - Die Nennwerte sind Bruttoleistungen, die keine Abzüge für die Motorwärme der Innenventilatoren enthalten. - Οι τιμές που αναφέρονται αντιπροσωπεύουν μικτή απόδοση, χωρίς κάποια μικρή απόκλιση που αντιστοιχεί στη θέρμανση του κινητήρα του ανεμιστήρα της εσωτερικής μονάδας. - Los valores indicados son capacidades brutas a las que no se ha restado el valor correspondiente al calor del motor del ventilador interior. - Les valeurs nominales indiquées correspondent à des puissances brutes qui n'incluent aucune déduction pour la chaleur du moteur de ventilateur de l'unité intérieure. - I valori indicati si riferiscono alle capacità lorde e non comprendono la riduzione per l'apporto di calore generato dal motore del ventilatore dell'unità interna. - De weergegeven cijfers zijn brutocapaciteiten excl. reductiefactor voor warmte afgegeven door de binnenventilator. - Указанные номинальные значения являются общими, т.е. не учитывают нагревание от двигателя внутреннего вентилятора. - Gösterilen değerler, iç ünite fan motoru sıcaklığının dikkate alınmadığı brüt kapasite değerleridir.
- shows nominal capacities. - stellt Nennleistungen dar. - υποδεικνύει ονομαστικές τιμές απόδοσης. - indica capacidades nominales. - indique les puissances nominales. - mostra la capacità nominali. - geeft nominale capaciteiten weer. - показывает номинальные значения мощности. - nominal kapasite değerlerini gösterir.
- Direct interpolation is permissible. Do not extrapolate. - Direkte Interpolation ist zulässig. Extrapolieren ist nicht zulässig. - Επιτρέπεται η απευθείας παρεμβολή. Οχι όμως η παρεκβολή. - Se permite la interpolación directa. Sin embargo, no extrapole. - Interpolation directe autorisée. Ne pas extrapoler. - È consentita l'interpolazione diretta. Non è tuttavia permessa l'estrapolazione. - Directe interpolatie is toegestaan. Extrapoler niet. - Допускается прямая интерполяция. Экстраполяция не допускается. - Doğrudan interpolasyon yapilmasina izin verilir. Ekstrapolasyon yasarmaz.
- Unit is able to operate at ambient from 0°C to 52°C without pressure trip. - Gerät kann bei Umgebungstemperaturen von 0°C bis 52°C ohne Druckabfall betrieben werden. - Η μονάδα έχει τη δυνατότητα να λειτουργεί σε θερμοκρασία περιβάλλοντος από 0°C έως 52°C χωρίς πτώση πίεσης. - La unidad puede funcionar con temperaturas ambiente de entre 0 y 52°C sin cortes por presión. - L'unité est en mesure de fonctionner par température extérieure comprise entre 0 °C et 46 °C sans déclenchement pression. - L'unità è in grado di funzionare con temperature esterne comprese tra 0° e 52° senza cali di pressione. - De unit kan werken bij omgevingstemperaturen van 0°C tot 52°C zonder drukschakeling. - Блок может работать при температуре окружающей среды от 0 до 52°C без отключения, вызываемого давлением. - Ünite, 0°C ila 52°C ortam sıcaklığında basınç problemi olmadan çalışabilir.

# 7 Capacity tables

## 7 - 3 Capacity Correction Factor

### Performance Adjustment

#### - Performance Adjustment

Performance of the unit will derate when it operates with fresh air mode and this condition depends on user's selection. Before installation, it is recommended to check the correction factor table (table 1) below in order to do a correct design selection. Noted that it has different factor used for different selection of fresh air opening, in both cool mode and heat mode.

Table 1: Correction factor for unit's performance.

Rooftop Model	Economiser Kit Model	Operation Mode	Fresh Air Opening (%)					
			0	5	10	15	20	25
UATYQ Series	ECONO Series	Cooling	1.00	0.97	0.93	0.90	0.86	0.80
		Heating	1.00	0.97	0.93	0.90	0.87	0.83

#### - Pressure Drop Table

Airflow resistance refers to pressure drop caused by the economiser kit. Before installation, it is recommended to check the pressure drop in table 2 below in order to do a correct design selection.

Table 2: Pressure drop in economiser kit

Rooftop Model	Economiser Kit Model	Standard Airflow Rate		Maximum Pressure Drop in Economiser Kit								Down Return (Vertical) Application
				Side Return (Horizontal) Application						Economiser Mode	Fresh Air Mode or Economiser Mode	
		Fresh Air Mode						Maximum Pressure Drop (Pa)	Pressure Drop (Pa)			
		Cfm	m3/s	0% Outdoor Air Damper Opening (Pa)	5% Outdoor Air Damper Opening (Pa)	10% Outdoor Air Damper Opening (Pa)	15% Outdoor Air Damper Opening (Pa)			20% Outdoor Air Damper Opening (Pa)	25% Outdoor Air Damper Opening (Pa)	
UATYQ250	ECONO250	3300	1.56	0	3	5	10	13	15	20	0	
UATYQ350	ECONO350	4300	2.03	0	5	10	13	20	30	40	0	
UATYQ450	ECONO450	5650	2.67	0	7	21	38	53	58	68	0	
UATYQ550	ECONO550	6700	3.16	0	15	30	50	60	65	70	0	
UATYQ600	ECONO600	7300	3.45	0	20	37	52	58	61	65	0	
UATYQ700	ECONO700	8300	3.92	0	5	10	13	20	32	42	15	

Pressure drop in economiser kit from table 2 refers to initial resistance. An air filter that is installed in the rain hood of economiser will expose to outdoor environment and easily becomes dirty. Regular service is required for this filter (recommended at least once every two weeks). The final resistance shall not exceed the recommended value in table 3 below.

Table 3: Technical specifications for air filter in economiser rain hood.

Economiser Kit Model	Recommended Type	Quantity	Dimension (L x W x t)	* Initial Resistance (Pa)	Recommended Final Resistance
UATYQ250	Washable Saranet Filter	1	750 x 515 x 4	15	80
UATYQ350	Washable Saranet Filter	1	658 x 560 x 4	13	70
UATYQ450	Washable Saranet Filter	1	658 x 560 x 4	27	70
UATYQ550	Washable Saranet Filter	1	750 x 604 x 4	34	110
UATYQ600	Washable Saranet Filter	1	750 x 604 x 4	30	105
UATYQ700	Washable Saranet Filter	1	1088 x 690 x 4	16	110

Note: \* Initial resistance is rated based on 85% of outdoor air opening.

The resistance values mentioned in table 3 have been incorporated into pressure drop values in table 2. Table 3 provides guidelines only on the service of filter. Thus, system sizing does not require to include these values into consideration.

#### Optional Air Filter

There is a 2" filter slot inside the unit. Optional filter (field supplied) is recommended as the second layer filtration since outdoor air damper opening may bring in dust and dirt. In order to ensure that final resistance of the filter not exceed recommended values, service the filter every 2 weeks or more frequent if necessary.

#### Limitation Of Economiser Kit In Thermostat Control

Thermostat control is used with third party controller and thus the setting temperature of specific application cannot be known. For this case, it is recommended to use remote controller to set the required setting temperature before the hardware setting for thermostat control is conducted. The minimum fresh air opening for fan mode in thermostat control operation shall follow the user's selection in hardware setting (Dip Switch 1 and Dip Switch 2), whichever is lower. Note: Refer to hardware setting guideline provided in part (v) under chapter 'control operation guide' in installation manual for mode selection.

#### Necessary For Pressure Relief

Presence of fresh air may cause building pressure rises and bring discomfort to the users. When necessary, it is recommended to install a relief damper or exhaust fan in the return air duct. The relief damper may be a gravity type or motorized type. It is used to maintain building pressurization by regulating the flow of relief air from the building. For most bulding, the maximum pressure is not to exceed 25Pa.

### G Unit Conversion

In the case of converting standard unit to downthrow unit, follow the steps as stated below:  
**UATYQ250, 350, 450, 550, 600 & 700**

Install back the pulley belt. Adjust the belt tension. Lastly, install back the side panel. Refer Note 1.

**NOTE 1**

For downthrow conversion, belt length need to be changed.  
 For unit with standard pulley, belt length = a mm  
 Shaft to shaft distance for downthrow, C-C = b mm

	UATYQ250	UATYQ350	UATYQ450	UATYQ550	UATYQ600	UATYQ700
<b>a</b>	1382	1357	1250	1382	1382	1382
<b>b</b>	375	388	375	445	445	435

**NOTE 1**

Sealant such like gasket (field supply) shall be placed in between the metal cover and flange. Besides that, weather-proof silicone shall be applied on all the joints, screw holes and gaps to ensure water-tight condition.

**NOTE 1**

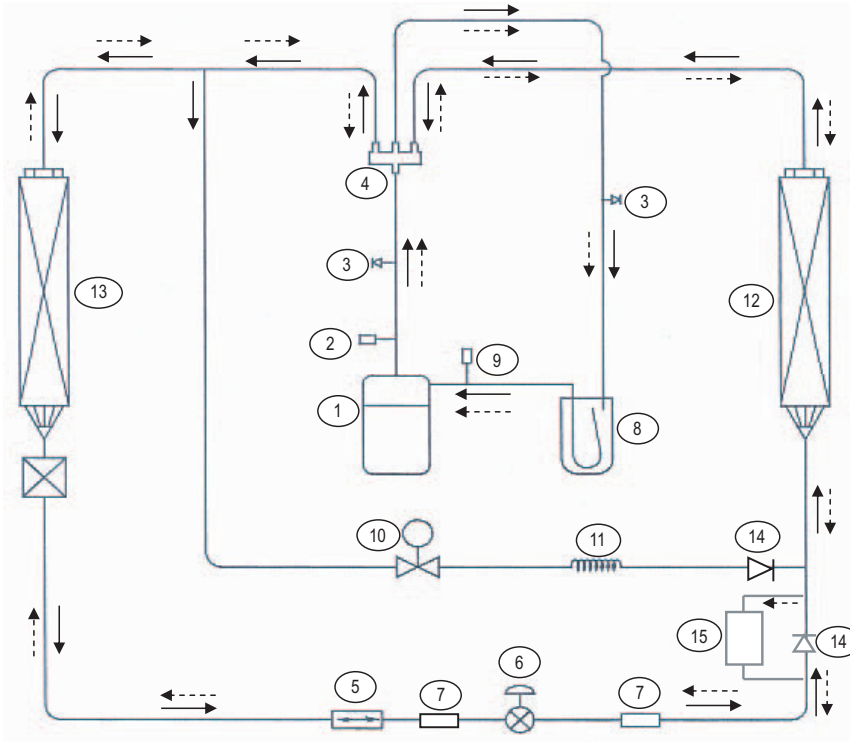

Refer Engineering Data Book for blower curve and technical data of variable pitch pulley.

#### Features Write up

1. **Package Unit:** Daikin's new range of rooftop packaged units has been developed specifically to suit commercial applications and are designed to be easy to install, requiring only ducting (and associated fittings), power/ control wiring and drain piping. Along with the light grey colour, the flat top and compact design gives an aesthetic and neat appearance when installed in line of sight. The unit cabinet is made of powder coated sheet metal especially suitable for outdoor use. All parts of the structure are fastened with corrosion resistant screws and bolts.
2. **Base Beam:** The base beams are fixed and provide a rigid foundation for the entire unit. The beam has the forklift slots and rigging holes for better handling purpose. It is also designed to allow mounting on a roof curb, the dimension of the roof curb should be followed strictly in accordance with the installation manual.
3. **Flexible Air Supply:** Since all the units utilize a belt/ pulley driven supply air fan, the units are able to meet a wide range of supply air volumes and external static pressures. Furthermore, the supply air fan motors, pulleys and belts (field supplied) can be easily changed on site to meet exact air flow and ESP requirement if required.
4. **Convertible Return and Supply Air:** Unit can be easily converted from horizontal to vertical (downward) supply and return air duct configuration by relocating the panels and supply air fan mounting.
5. **Scroll Compressor:** Units are equipped with high efficiency and reliable scroll compressors. Each compressor is mounted on rubber vibration isolators in order to reduce the noise level and vibration transmissions.
6. **Powder Coated Condensate Drain Pan:** The sheet metal condensate drain pan is powder coated to resist corrosion.
7. **Slots for 2 inches Return Air Filters:** A 2 inches rail is provided as standard in instances where a field supplied filter casement need to be installed.
8. **Higher Energy Efficiency Rating:** The UATYQ series is designed in line with market requirement for better energy saving. Its' performance is claimed to be among the best in the market.

## 14 Specification text

### 14 - 1 Specification Text

UATYQ-CY1

#### Technical Write Up:

##### 1. Compressor

Compressor used in UATYQ series Packaged Units are hermetically sealed scroll type. All the compressors are provided with an internal overload protection.

##### 2. Condenser

Condenser coils are manufactured from seamless inner grooved copper tubes mechanically bonded to aluminium fins to ensure optimum heat transfer. All coils are tested against by Nitrogen holding at 609psig and highly precise Helium leak test at 235psig. ALL standard coils are up to 3 rows / 14-16 FPI, 3/8" (9.52mm) O.D. tubes. Hydrophilic Gold Fin coating (NA549) is offered as standard, which has longer life span under corrosive environment.

##### 3. Evaporator

Evaporator coils are manufactured from seamless inner grooved copper tubes mechanically bonded to aluminium fins to ensure optimum heat transfer. All coils are tested against by Nitrogen holding at 609psig and highly precise Helium leak test at 235psig. ALL standard coils are 3-4 rows / 14-16 FPI, 3/8" (9.52mm) O.D. tubes. Hydrophilic Gold Fin coating (NA549) is offered as standard, which has longer life span under corrosive environment.

##### 4. Condenser Fan and Motor

Fans are of propeller type, direct driven by weatherproof electrical induction motors. Condenser fan motor has class F insulation and splash-proof enclosure, IP44.

##### 5. Evaporator Fan and Drive

Blower is DWDI centrifugal, forward curved type. It is mechanically and dynamically balanced and being mounted on a rigid shaft in a self aligned bearing block. The motor is fitted with an adjustable V-belt drive, as standard. It has class B insulation and dripping water proof, IP22.

##### 6. Refrigerant Circuit

Each refrigerant circuit shall have independent electronic expansion devices, HP/LP switch and refrigerant line service pressure ports as standard factory installed.

##### 7. Expansion device:

Electronic Expansion Valve is being used to ensure accurate control of refrigerant flow.

##### 8. Casing/ Structure

The unit casing used in UATYQ series is made of zinc coated galvanized steel sheets. It is further coated with an electrostatic powder coat and then oven-baked for a tough and lasting weather resistant finish. Zinc plated screws are used throughout to further reduce possibility of unit rusting.

## 14 Specification text

### 14 - 1 Specification Text

UATYQ-CY1

#### 9. Insulation

ALL possible areas of condensation to happen are insulated by PE, Polyethelene. Panel insulation is 10mm thickness while drain pan insulation is 5mm thickness.

#### 10. Control

Units shall be completely factory supplied with an integrated controlled Module, with built in resident control algorithms to make decide heating, cooling, or ventilating operations in response to electronic signals from indoor & outdoor temperature sensors.

#### 11. Rooftop Panel - handset

Rooftop Panel comprises all starting, operating and safety controls setting. It is connected to the IC module PCB and supplied as standard.

#### 12. Optional Features

##### I. 3rd Party Thermostat

For application that requires uniform thermostat outlook with other electrical appliances. 3rd Party thermostat can be connected to the factory supplied module via the contact point available on PCB board.

##### II. Basic BMS Connection

Unit's standard PCB board provides dry contact for basic BMS connection. Input signal will go to dry contact ON/OFF, COOL/HEAT, and 4 to 20 mA temperature adjuster while output signal will come from ON/OFF, COOL/HEAT, ALARM and DEFROST dry contact.

##### III. Higher Level BMS Connection

Connection to higher level BMS is possible via Daikin compatible interface, DEC101/102A55.

##### IV. Economizer

Field installed economizer is supplied from factory as an accessory. It is also designed to cater for horizontal or vertical down throw air discharge orientation.

##### V. CO2 Sensor

Field specified CO2 sensor can be easily plug on the control board's dry contact, which is come as standard.

# 15 Installation

## 15 - 1 Roofcurb drawings

UATYQ250-700CY1

Unit Support (For down throw unit only)

1. The figure shows the use of the roof curb for mounting these units.
2. The curb should be sealed and fixed to the roof by weather stripping. A suggested means of sealing the unit and roof curb as shown in the right.
3. Recommended roof curb dimension is shown below.

## 15 - 2 Pulley

UATYQ250,350,450,550,600,700CY1

**TECHNICAL DATA FOR UATYQ-MCY1 ROOFTOP SERIES WITH VARIABLE PITCH PULLEY:**

**Motor Variable Pitch Pulley Data:**

Date is provided according to factory fitted standard motor and blower. The range of airflow & ESP must be worked within blower curve boundary.

					V-belt length	Pulley center distance(mm)	V-belt length	Pulley center distance(mm)	
						Nominal		Nominal	
250	A	12.7	10	40	1657	510	1382	375	1
350	A	12.7	10	40	1782	590	1357	388	1
450	A	12.7	10	40	1657	515	1250	375	2
550	A	12.7	10	40	1932	710	1382	445	2
600	A	12.7	10	40	1957	710	1382	445	2
700	A	12.7	10	40	1907	690	1382	435	2

**Example for selection process:**

The following data are the rated design points for model R410A rooftop UATYQ250MCY1:  
 Airflow Rate = 3300 cfm  
 External Static Pressure (ESP) = 150Pa  
 Blower RPM = 657

To increase the ESP to 200Pa, but maintain the airflow rate at 3300cfm, please follow the steps below:

**Step 1: Selection of new desired point.**

From the blower curve, select the point that can meet both of the requirements (ESP = 200Pa and airflow rate = 3300cfm).

**Step 2: Read RPM value from the blower curve.**

Next, refer to the RPM value in the blower curve which is corresponding to this point.  
 For instance, from the blower curve on the right, RPM which is corresponding to this point = 727.

**Step 3: Read power consumption value for indoor fan motor.**

Then, use this RPM value to estimate the power consumption of indoor fan motor by referring to the table of 'Motor Variable Pitch Pulley Data'.  
 For instance, from the table, indoor fan motor with 727RPM consumes 1000W.

**Step 4: Read number of turns for variable pitch pulley.**

Similarly, use this RPM value to read the no. of turns (N) by referring to the table of 'Motor Variable Pitch Pulley Data'. The variable pitch pulley for motor shall be adjusted to this 'N' in order to achieve the desired point (ESP = 200Pa and airflow rate = 3300cfm).

For instance, from the table, no. of turns (N) = 1.5 in order to get 727RPM. First, adjust the motor pulley to 0 turns. Then, makes 1 and half turns on the pulley. Cross check the dimension 'X', which stands for regulation space of motor pulley. In this case, X = 3.5mm.

UATYQ250 - blower curve

Note: The shaded area indicates the operating range of variable pitch pulley which is used with standard motor (factory fitted). In case if the operation is out of range, change pulley or/and motor size.

In all of us,  
a green heart

Daikin's unique position as a manufacturer of air conditioning equipment, compressors and refrigerants has led to its close involvement in environmental issues. For several years Daikin has had the intention to become a leader in the provision of products that have limited impact on the environment. This challenge demands the eco design and development of a wide range of products and an energy management system, resulting in energy conservation and a reduction of waste.

Daikin Europe NV, participates in the Eurovent Certification programme for Air conditioners (AC), Liquid Chilling Packages (LCP), Air handling units (AHU) and Fan coil units (FCU). Check ongoing validity of certificate online: [www.eurovent-certification.com](http://www.eurovent-certification.com) or using: [www.certiflash.com](http://www.certiflash.com)
