1. Introduction

1.1 Safety Cautions

Be sure to read the following safety cautions before conducting repair work.

The caution items are classified into “Warning” and “Caution”. The “Warning” items are especially important since they can lead to death or serious injury if they are not followed closely. The “Caution” items can also lead to serious accidents under some conditions if they are not followed. Therefore, be sure to observe all the safety caution items described below.

About the pictograms

△ This symbol indicates an item for which caution must be exercised.
The pictogram shows the item to which attention must be paid.

○ This symbol indicates a prohibited action.
The prohibited item or action is shown inside or near the symbol.

● This symbol indicates an action that must be taken, or an instruction.
The instruction is shown inside or near the symbol.

After the repair work is complete, be sure to conduct a test operation to ensure that the equipment operates normally, and explain the cautions for operating the product to the customer.

1.1.1 Caution in Repair

Warning	
Be sure to disconnect the power cable plug from the plug socket before disassembling the equipment for a repair. Working on the equipment that is connected to a power supply can cause an electrical shook. If it is necessary to supply power to the equipment to conduct the repair or inspecting the circuits, do not touch any electrically charged sections of the equipment.	
If the refrigerant gas discharges during the repair work, do not touch the discharging refrigerant gas.The refrigerant gas can cause frostbite.	
When disconnecting the suction or discharge pipe of the compressor at the welded section, release the refrigerant gas completely at a well-ventilated place first. If there is a gas remaining inside the compressor, the refrigerant gas or refrigerating machine oil discharges when the pipe is disconnected, and it can cause injury.	
If the refrigerant gas leaks during the repair work, ventilate the area. The refrigerant gas can generate toxic gases when it contacts flames.	
The step-up capacitor supplies high-voltage electricity to the electrical components of the outdoor unit. Be sure to discharge the capacitor completely before conducting repair work.A charged capacitor can cause an electrical shock.	
Do not start or stop the air conditioner operation by plugging or unplugging the power cable plug. Plugging or unplugging the power cable plug to operate the equipment can cause an electrical shock or fire.	

Warning	
Do not repair the electrical components with wet hands. Working on the equipment with wet hands can cause an electrical shock.	Do not clean the air conditioner by splashing water. Washing the unit with water can cause an electrical shock.	
Be sure to provide the grounding when repairing the equipment in a humid or wet place, to avoid electrical shocks.	
Be sure to turn off the power switch and unplug the power cable when cleaning the equipment. The internal fan rotates at a high speed, and cause injury.	
Do not tilt the unit when removing it. The water inside the unit can spill and wet the furniture and floor.	
Be sure to check that the refrigerating cycle section has cooled down sufficiently before conducting repair work. Working on the unit when the refrigerating cycle section is hot can cause burns.	
Use the welder in a well-ventilated place. Using the welder in an enclosed room can cause oxygen deficiency.	

1.1.2 Cautions Regarding Products after Repair

Warning	
Be sure to use parts listed in the service parts list of the applicable model and appropriate tools to conduct repair work. Never attempt to modify the equipment. The use of inappropriate parts or tools can cause an electrical shock, excessive heat generation or fire.	
When relocating the equipment, make sure that the new installation site has sufficient strength to withstand the weight of the equipment. If the installation site does not have sufficient strength and if the installation work is not conducted securely, the equipment can fall and cause injury.	
Be sure to install the product correctly by using the provided standard installation frame. Incorrect use of the installation frame and improper installation can cause the equipment to fall, resulting in injury.	For integral units only
Be sure to install the product securely in the installation frame mounted on a window frame. If the unit is not securely mounted, it can fall and cause injury.	For integral units only

Warning	
Be sure to use an exclusive power circuit for the equipment, and follow the technical standards related to the electrical equipment, the internal wiring regulations and the instruction manual for installation when conducting electrical work. Insufficient power circuit capacity and improper electrical work can cause an electrical shock or fire.	
Be sure to use the specified cable to connect between the indoor and outdoor units. Make the connections securely and route the cable properly so that there is no force pulling the cable at the connection terminals. Improper connections can cause excessive heat generation or fire.	
When connecting the cable between the indoor and outdoor units, make sure that the terminal cover does not lift off or dismount because of the cable. If the cover is not mounted properly, the terminal connection section can cause an electrical shock, excessive heat generation or fire.	
Do not damage or modify the power cable. Damaged or modified power cable can cause an electrical shock or fire. Placing heavy items on the power cable, and heating or pulling the power cable can damage the cable.	
Do not mix air or gas other than the specified refrigerant (R-410A / R22) in the refrigerant system. If air enters the refrigerating system, an excessively high pressure results, causing equipment damage and injury.	
If the refrigerant gas leaks, be sure to locate the leak and repair it before charging the refrigerant. After charging refrigerant, make sure that there is no refrigerant leak. If the leak cannot be located and the repair work must be stopped, be sure to perform pump-down and close the service valve, to prevent the refrigerant gas from leaking into the room. The refrigerant gas itself is harmless, but it can generate toxic gases when it contacts flames, such as fan and other heaters, stoves and ranges.	
When replacing the coin battery in the remote controller, be sure to disposed of the old battery to prevent children from swallowing it. If a child swallows the coin battery, see a doctor immediately.	

Caution	
Installation of a leakage breaker is necessary in some cases depending on the conditions of the installation site, to prevent electrical shocks.	
Do not install the equipment in a place where there is a possibility of combustible gas leaks. If a combustible gas leaks and remains around the unit, it can cause a fire.	
Be sure to install the packing and seal on the installation frame properly. If the packing and seal are not installed properly, water can enter the room and wet the furniture and floor.	For integral units only

1.1.3 Inspection after Repair

Warning	
Check to make sure that the power cable plug is not dirty or loose, then insert the plug into a power outlet all the way. If the plug has dust or loose connection, it can cause an electrical shock or fire.	
If the power cable and lead wires have scratches or deteriorated, be sure to replace them. Damaged cable and wires can cause an electrical shock, excessive heat generation or fire.	

Warning	
Do not use a joined power cable or extension cable, or share the same power outlet with other electrical appliances, since it can cause an electrical shock, excessive heat generation or fire.	

Caution	
Check to see if the parts and wires are mounted and connected properly, and if the connections at the soldered or crimped terminals are secure. Improper installation and connections can cause excessive heat generation, fire or an electrical shock.	
If the installation platform or frame has corroded, replace it. Corroded installation platform or frame can cause the unit to fall, resulting in injury.	
Check the grounding, and repair it if the equipment is not properly grounded. Improper grounding can cause an electrical shock.	
Be sure to measure the insulation resistance after the repair, and make sure that the resistance is 1 M ohm or higher. Faulty insulation can cause an electrical shock.	
Be sure to check the drainage of the indoor unit after the repair. Faulty drainage can cause the water to enter the room and wet the furniture and floor.	

1.1.4 Using Icons

Icons are used to attract the attention of the reader to specific information. The meaning of each icon is described in the table below:

1.1.5 Using Icons List

Icon	Type of Information	Description
 Note:	Note	A “note” provides information that is not indispensable, but may nevertheless be valuable to the reader, such as tips and tricks.
 Caution	Caution	A “caution” is used when there is danger that the reader, through incorrect manipulation, may damage equipment, loose data, get an unexpected result or has to restart (part of) a procedure.
 Warning	Warning	A “warning” is used when there is danger of personal injury.
	Reference	A “reference” guides the reader to other places in this binder or in this manual, where he/she will find additional information on a specific topic.

2. List of Functions

Category	Functions	HSU-09H03/R(QXF)	HSU-12H03/R(QXF)
Healthy negative ion	make your room full of an abundance natural negative ions.	Y	Y
Left&right flow	With specialized motor and flaps, the airflow can be adjusted .	Y	Y
DRY function	Make dehumidifying in the room when the unit is working in the "DRY" mode	Y	Y
Child lock	Avoid the child's wrong operation on the remote controller	Y	Y
3D air flow	The 3D airflow is able to deliver the airflow horizontally and vertically.	Y	Y
24Hour timer	Use the timer function to set on,or off,or from on to off,or from off to on	Y	Y
Auto restart	automatic return to previous operation conditions after asundden power blackout	Y	Y
Easy clean design	The panel is easy to wash and the airflow vents can be detached easily	Y	Y
Intelligent air	With twin-blade technology ,the airflow can be adjusted not to blow directly	Y	Y
Anti-mold filter	Catches most small particles and remove unpleasant odors effectively.	Y	Y
Sleep mode	The setting temprature and the indoor noise can be adjusted to a more comfortable level when you set the "sleep mode"during night sleep	Y	Y
O2 refresh	bring fresh air in and take unpleasant air out without tempreture and humidity loss	Y	Y
4 Fan setting	Slect the fan speed LO,MED,HI,AUTO	Y	Y
Entire auto mode	You can set a tempreture value,with which the unit can be adjusted the operation mode automatically	Y	Y
O2 fresh	It can bring the fresh air in when the machine is running in O2 fresh mode.	N	N
Healthy UV ray	UV ray generator can eliminate and prevent bacteria in air effectively	N	N
Bacteria-killing medium	3-in-1 effect:Anti-Allergen , Anti-Bactetia	Y	Y
AIP	Purify the room by producing high voltage electric filed to absorb dusts	Y	Y
VC layer	Release Vitamin C to keep health to the skin expecially.	Y	Y
Auto mode	adjust the last fixed operation mode automatically.	N	N
ESF filter	Trap harmful dust and remove unpleasant odors effectively	N	N
Power mode	Quick cooling or heating	Y	Y
Soft mode	lower noise operation condition	Y	Y
Negative ion filter	Generate negative ions by the filter.	N	N
Constant temperature dehumidification	Make dehumidifying in the room while keeping the constant temperature inside	N	N
Photocatalyst filter	Eminiates the air of a wide variety of odor-causing substances from cigarette smoke particles to chemical vapors	N	N

Note: Y: Holding Functions

N: No Functions

3. Specifications

5. Functions and control

5.1 main functions and control specifications

Including brief introduction to air conditioners of series models and electric control function.

Automatic running

When the system runs under "automatic" mode for the first time, it will determine the operating mode according to the follows,

Tr≥Ts-3℃ Choose Cooling Mode

Tr＜Ts-3℃ Choose Heating Mode

The system will shift its operating mode between the above mentioned two to changes of the indoor temperature. If the system is currently under cooling mode, the compressor will stop functioning if the temperature lowers to such a degree that requires so; then it will recheck the temperature 15 minutes later: it will switch to the heating mode if the temperature is Tr＜Ts-3℃,or it will still stay in cooling mode(including blowing mode). if the system is currently under heating mode, the compressor will stop running if the temperature lowers to such a degree that requires so, then it will recheck the temperature 15 minutes later: it will switch to the cooling mode if the temperature is Tr ＞Ts+3℃.

Indoor temperature control

Temperature control range : 16℃—30℃

Temperature control precision: ±1℃

Compressor can't be controlled by temperature sensor within 2 minutes after it starts

① Cooling mode:

When Tr> Ts, outdoor fan motor and compressor on, and indoor fan motor run at fixed wind speed. When Tr < Ts, outdoor fan motor and compressor off, and when Tr > Ts, outdoor fan motor and compressor are working again .If Tr=Ts, the indoor fan motor , outdoor fan motor and the compressor's state will not change.

② Heating mode:

When Tr ≤Ts, compressor, four-ways valve and outdoor fan motor is on, indoor fan motor runs as in cold blast avoidance mode, and 4℃of compensation is added after compressor is started.

When Tr>Ts+5℃, compressor is off, and the indoor fan motor runs as in cold blast avoidance mode.

When Tr<Ts+5℃, compressor, four-ways valve and outdoor fan motor is on, and the indoor fan motor runs as in the mode of avoiding cold blast.

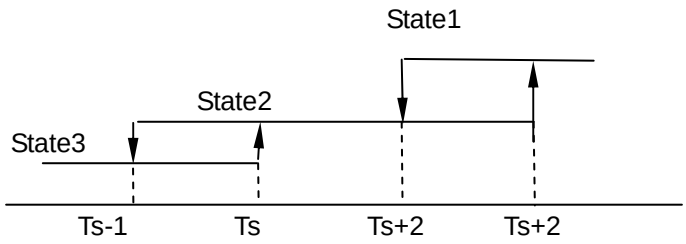
Dehumidification running

The compressor, outdoor fan and indoor fan will run as per the following working pattern so as to realize the refrigerating running of dehumidification:

① Tr> Ts+2℃, compressor, outdoor fan run continuously, indoor fan runs as per setting wind speed (State 1);

② Ts+2℃≥Tr≥Ts, compressor, outdoor fan run intermittently with 10 minutes ON, 6 minutes OFF. (Compressor and outdoor fan are synchronous) indoor fan runs in fixed lower wind speed, and will cease at the stand-by time of 3 minutes (State 2)

③ Tr <Ts, compressor, outdoor fan ceases, indoor fan runs in lower wind speed. (State 3)



Warm start

When heating running begins, indoor fan will conduct the following fan control:

① If the temperature of indoor coil pipe is ≥ 23℃, start lower wind speed;

② If the temperature of indoor coil pipe is ≥ 38℃ or the running time of compressor≥ 4 minutes, turn to setting wind speed.

Control of indoor fan under heating OFF state

Under heating state, the compressor will cease; if the indoor coil pipe's temperature Tp≥23℃, indoor fan will run in lower wind speed ; if the coil pipe's temperature Tp<21℃,indoor fan will cease

Defrosting control

① Defrosting beginning condition:

a. After the state of Tp-Tr<18℃ is continued for 5 minutes, the accumulated running time of the compressor exceeds 45 minutes, the continuous running time of the compressor exceeds 20 minutes;

b. The accumulated running time of the compressor exceeds 3 hours, the continuous running time of the compressor exceeds 20 minutes, indoor unit's Tp <42℃;

c. The continuous running time of the compressor exceeds 20 minutes, the temperature of indoor coil pipe decreases 1℃ every 6 minutes, which lasts for more than 3 times, indoor unit's Tp <42℃;

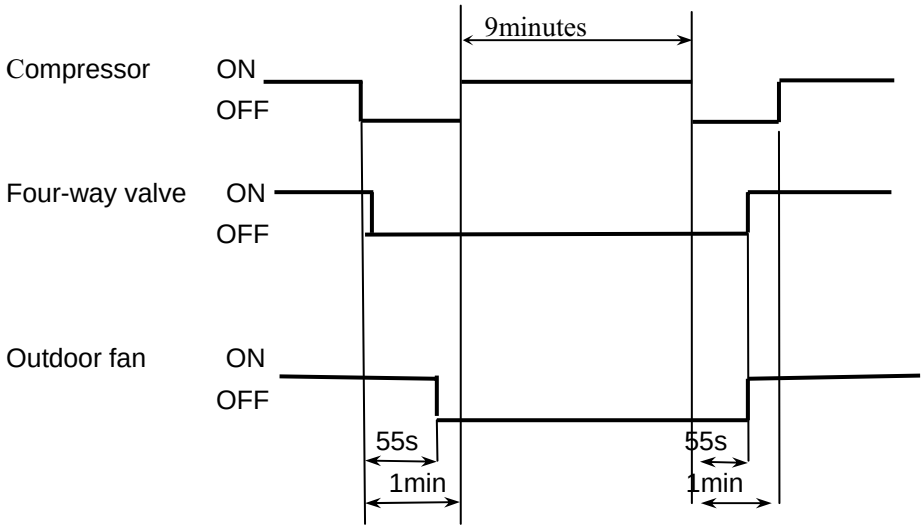
d. When the indoor unit is in the state of overload protection and the outdoor unit ceases, when the rerunning time of outdoor unit exceeds10 minutes, the accumulated running time of the compressor exceeds 45 minutes, the continuous running time of the compressor is over 20 minutes, and Tp <42℃.

Defrosting will begin if one of the above conditions is met.

② Defrosting finishing condition:

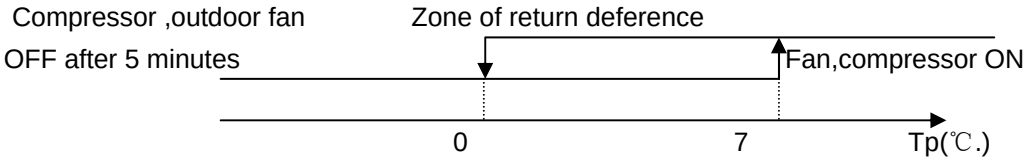
If the defrosting time exceeds 9 (for 12 models)minutes ,the original heating state will be resumed;

Note: Sequence of defrosting actions:



Under refrigerating and dehumidifying state, the air conditioner will control the outdoor fan as per the temperature Tp of the indoor coil pipe according to the following conditions:

Freezing prevention function



3minutes stand-by time

When the compressor ceases due to the sensor OFF, unit On or OFF or fault, it will maintain pause for 3 minutes.

Overload protection during heating running

Temperature protection of indoor coil pipe: Under heating state, the air conditioner will control the running of the fan as per the temperature Tp of the indoor coil pipe and according to the following conditions:

a.65℃≤Tp, outdoor fan ceases; Tp≤60℃, outdoor fan resumes; the time from ceasing to resuming is about 45 seconds;

b72℃≤Tp, outdoor fan of compressor ceases after 5 seconds; Tp≤64℃, compressor resumes after 3 minutes.

Compensatory function of power failure

If the unit is suddenly off during running due to power failure, or closed for maintenance or troubleshooting, it will restart to run after the power resumes with the original condition before the unit is off

Note: 1. Function setting: Pressing the SLEEP button on the remote control unit for 10 times until hearing 4 sounds from the buzzer on the panel.

2. Memory content: Running mode, setting wind speed, setting temperature, sleep state, flap state.

3. Cancellation of function: Pressing the SLEEP button on the remote Control unit for 10 times until hearing 2 sounds from the buzzer on the panel.

Trial run function

When the air conditioner is in OFF state, press the emergency switch for 5 seconds till hearing 2 sounds of click from the buzzer, then the air conditioner will turn to the trial run state. The unit will run in the refrigerating mode and the indoor fan will run in high wind speed mode.

Emergency running mode

When the air conditioner is in stand-by state, press the emergency switch till hearing a sound from the buzzer, then the air conditioner will turn to the emergency run state. The rules of emergency run are as follows:

Tr≥23℃, running refrigerating mode, Ts = 26℃;

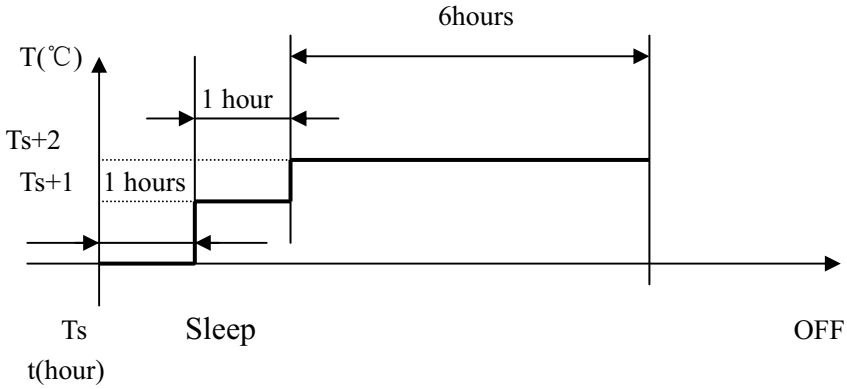
Tr<23℃, running heating mode, Ts = 23℃.

Temperature compensation

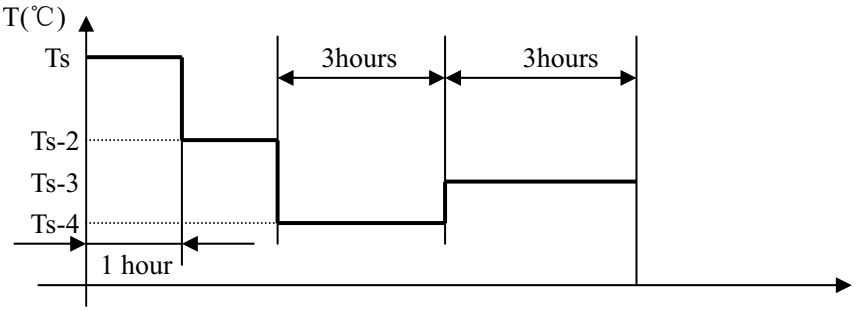
There is the function of automatic temperature compensation when heating, with heating temperature setting = Ts(remote setting) + 4℃.

Sleeping function

After setting the sleeping function, the refrigerating mode and dehumidification mode will run as per the following rules:



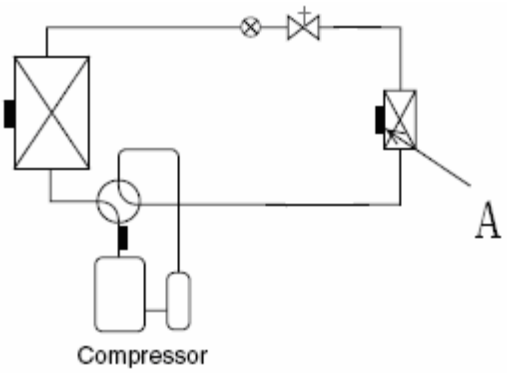
a. After setting the sleeping function, the heating mode will run as per the following rules:



As shown in the above diagram, after running for 1 hour under refrigerating mode and dehumidification mode, the setting temperature will increase 1℃; after another 1 hour, it will increase 1℃ again, and after 6 hours, it will cease; after running for 1 hour under heating mode, the setting temperature will decrease 2℃, after another 1 hour, it will decrease the 2℃ again, and after 3 hours, it will increase 1℃, and after other 3 hours, it will cease.

Executive function after 2 seconds by remoter control:	After receiving remote control signal, the mainboard doesn't enter the corresponding instruction task until 2 seconds elapse.
Timer function:	You can set 24-hour timer on or timer off as required, and the minimum time unit is 1 minute. After setting, a pattern of clock displayed on the LED, and it is off when timer setting is completed. There are several timer mode as follows. 1) Timer on: The pattern of clock displaied on the LED,the background light is off, and unit behaves with halt status. Timer on is completed, and then unit starts running with the pattern of clock disappeared,and the background light is on. The unit starts with the last setting receiving timer signals, and sleep setting is not allowed. 2) Timer off: Unit working, the pattern of clock displaied on the LED; When reaching time setting, unit enters shutdown mode, and sleep function can be set. If timer off and sleep are set synchronously, the one which time is short run first. Executing shutdown instruction clear timer and sleep function. 3) Timer on and timer off can be set synchronously.
Alarm from indoor fan motor:	120 seconds later after the indoor fan motor is charged, and the impulse from fan motor is not detected , then stop outputting voltage to indoor fan motor, send alarm signals.

5.2 Function of Main Thermistor



Note: A: Indoor heat-exchange sensor

Indoor heat-exchange sensor

1.The indoor heat exchanger thermistor is used for anti-icing control .During the cooling operation, if the heat exchanger temperature in the room where operation is halted becomes 0°C, it is assumed as icing.

2. The indoor heat exchanger thermistor is used for preventing high temperature and high temperature expiration protection. During the heating operation , When the temp. of coil pipe is above 72℃,compressor and outdoor fan motor stop running 2 seconds later, and inlet air runs as the temp. sensor is off

5.3 Value of Thermistor

6. System Configuration

6.1 System Configuration

After the installation and test operation of the room air conditioner have been completed, it should be operated and handled as described below. Every user would like to know the correct method of operation of the room air conditioner, to check if it is capable of cooling (or heating) well, and to know a clever method of using it.In order to meet this expectation of the users, giving sufficient explanations taking enough time can be said to reduce about 80% of the requests for servicing. However good the installation work is and however good the functions are, the customer may blame either the room air conditioner or its installation work because of improper handling. The installation work and handing over of the unit can only be considered to have been completed when its handling has been explained to the user without using technical terms but giving full knowledge of the equipment.

6.2 Instruction

Cautions

Disposal of the old air conditioner

Before disposing an old air conditioner that goes out of use, please make sure it's inoperative and safe. Unplug the air conditioner in order to avoid the risk of child entrapment.

It must be noticed that air conditioner system contains refrigerants, which require specialized waste disposal. The valuable materials contained in an air conditioner can be recycled .Contact your local waste disposal center for proper disposal of an old air conditioner and contact your local authority or your dealer if you have any question. Please ensure that the pipework of your air conditioner does not get damagedprior to being picked up by the relevant waste disposal center, and contribute to environmental awareness by insisting on an appropriate, anti-pollution method of disposal.

Disposal of the packaging of your new air conditioner

All the packaging materials employed in the package of your new air conditioner may be disposed without any danger to the environment.

The cardboard box may be broken or cut into smaller pieces and given to a waste paper disposal service. The wrapping bag made of polyethylene and the polyethylene foam pads contain no fluorochloric hydrocarbon.

All these valuable materials may be taken to a waste collecting center and used again after adequate recycling.

Consult your local authorities for the name and address of the waste materials collecting centers and waste paper disposal services nearest to your house.

Safety Instructions and Warnings

Before starting the air conditioner, read the information given in the User's Guide carefully. The User's Guide contains very important observations relating to the assembly, operation and maintenance of the air conditioner.

The manufacturer does not accept responsibility for any damages that may arise due to non-observation of the following instruction.

- Damaged air conditioners are not to be put into operation. In case of doubt, consult your supplier.

- Use of the air conditioner is to be carried out in strict compliance with the relative instructions set forth in the User's Guide.

- Installation shall be done by professional people, don't install unit by yourself.

- For the purpose of the safety,the air conditioner must be properly grounded in accordance with specifications.

- Always remember to unplug the air conditioner before openning inlet grill. Never unplug your air conditioner by pulling on the power cord. Always grip plug firmly and pull straight out from the outlet.

- All electrical repairs must be carried out by qualified electricians. Inadequate repairs may result in a major source of danger for the user of the air conditioner.

- Do not damage any parts of the air conditioner that carry refrigerant by piercing or performating the air conditioner's tubes with sharp or pointed items, crushing or twisting any tubes, or scraping the coatings off the surfaces. If the refrigerant spurts out and gets into eyes, it may result in serious eye injuries.

Cautions

• Do not obstruct or cover the ventilation grille of the air conditoner.Do not put fingers or any other things into the inlet/outlet and swing louver.

• Do not allow children to play with the air conditioner.In no case should children be allowed to sit on the outdoor unit.

Specifications

• The refrigerating circuit is leak-proof.

The machine is adaptive in following situation

1.Applicable ambient temperature range:

Cooling	Indoor	Maximum:D.B/W.B Minimum:D.B/W.B	32°C/23°C 18°C/14°C
	Outdoor	Maximum:D.B/W.B Minimum:D.B	43°C/26°C 18°C
Heating	Indoor	Maximum:D.B Minimum:D.B	27°C 15°C
	Outdoor	Maximum:D.B/W.B Minimum:D.B/W.B	24°C/18°C -7°C/-8°C

2. If the power supply cord is damaged, it must be replaced by the manufacturer or its service agent or a similar qualified person.

3. If the fuse of indoor unit on PC board is broken,please change it with the type of T. 3.15A/ 250V. If the fuse of outdoor unit is broken,change it with the type of T.25A/250V

4. The wiring method should be in line with the local wiring standard.

5. After installation, the power plug should be easily reached.

6. The waste battery should be disposed properly.

7. The appliance is not intended for use by young children or infirm persons without supervision.

8. Young children should be supervised to ensure that they do not play with the applience.

9.Please employ the proper power plug, which fit into the power supply cord.

10 .The power plug and connecting cable must have acquired the local attestation.

11.In order to protect the units,please turn off the A/C first, and at least 30 seconds later, cutting off the power.

Cautions

Safety Instruction

- Please read the following Safety Instructions carefully prior to use.
- The instructions are classified into two levels, WARNING and CAUTION according to the seriousness of possible risks and damages as follows. Compliance to the instructions are strictly required for safety use.

Installation

⚠WARNING

Please call Sales/Service Shop for the Installation.
Do not attempt to install the air conditioner by yourself because improper works may cause electric shock, fire, water leakage.

Installation in a inadequate place may cause accidents. Do not install in the following place.

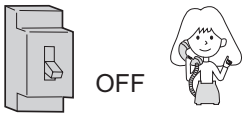
⚠CAUTION

Connect the earth cable. 	Do not install in the place where there is any possibility of inflammable gas leakage around the unit. PROHIBITION	Do not get the unit exposed to vapor or oil steam. PROHIBITION	Check proper installation of the drainage securely  STRICT ENFORCEMENT

Cautions

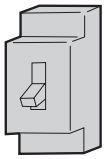
⚠ WARNING

When abnormality such as burnt-small found, immediately stop the operation button and contact sales shop.



STRICT ENFORCEMENT

Use an exclusive power source with a circuit breaker



Connect power supply cord to the outlet completely

STRICT ENFORCEMENT

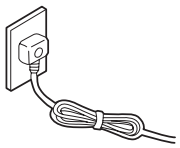
Use the proper voltage

STRICT ENFORCEMENT

Do not use power supply cord extended or connected in halfway

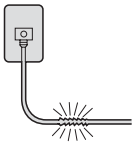
PROHIBITION

Do not use power supply cord in a bundle.



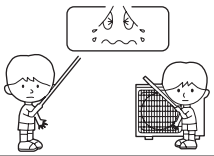
PROHIBITION

Take care not to damage the power supply cord.



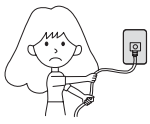
PROHIBITION

Do not insert objects into the air inlet or outlet.



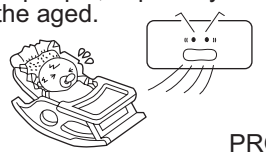
PROHIBITION

Do not start or stop the operation by disconnecting the power supply cord and so on.



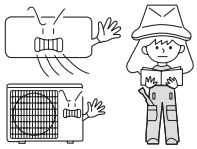
PROHIBITION

Do not channel the air flow directly at people, especially at infants or the aged.



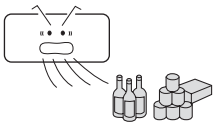
PROHIBITION

Do not try to repair or reconstruct by yourself.



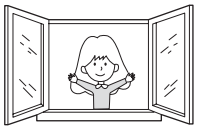
⚠ CAUTION

Do not use for the purpose of storage of food, art work, precise equipment, breeding, or cultivation.



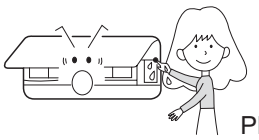
PROHIBITION

Take fresh air occasionally especially when gas appliance is running at the same time.



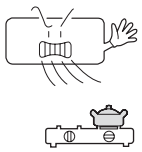
STRICT ENFORCEMENT

Do not operate the switch with wet hand.



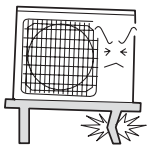
PROHIBITION

Do not install the unit near a fireplace or other heating apparatus.



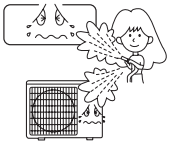
PROHIBITION

Check good condition of the installation stand



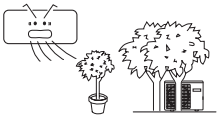
PROHIBITION

Do not pour water onto the unit for cleaning



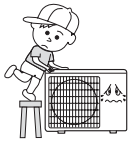
PROHIBITION

Do not place animals or plants in the direct path of the air flow



PROHIBITION

Do not place any objects on or climb on the unit.



PROHIBITION

Do not place flower vase or water containers on the top of the unit.

PROHIBITION

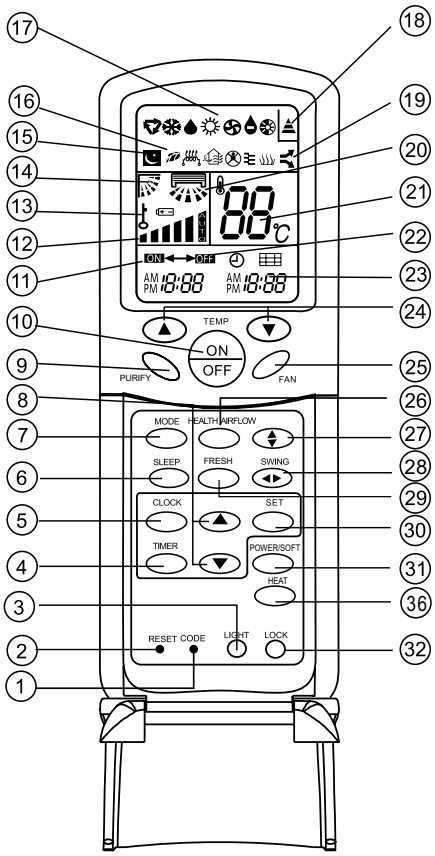
② INLET ④ DRAIN HOSE

Parts and Functions



1.CODE
Used to select CODE A or B with a press,A or B will be displayed on LCD.
Please select A without special explanation.

2.RESET
When the remote controller appears abnormal, use a sharp pointed article to press this button to reset the remote controller normal.

3.LIGHT button
Control the lightening and extinguishing of the indoor LED display board.

4. TIMER button
Used to select TIMER ON, TIMER OFF, TIMER ON-OFF.

5. CLOCK button
Used to set correct time.

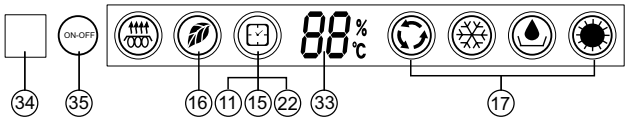
6. SLEEP button
Used to select sleep mode.

7. MODE button

8. HOUR button
Used to set clock and timer setting.

9. Purify button
Used to set air ionization purify and healthy function.

10. ON/OFF button
Used for unit start and stop.



11. TIMER ON display

12. FAN SPEED display

22. TIMER OFF display

23. CLOCK display

24. TEMP button
Used to select your desired temperature.

25. FAN button
Used to select fan speed: LOW,MED, HI, AUTO.

26. HEALTH AIRFLOW button
Used to set the health airflow mode.

27. SWING UP/DOWN button
Used to select up or down air sending direction.

28. SWING LEFT/RIGHT button
Used to select left/right air flow.

29. FRESH button
Use to set fresh air function.

30. SET button
Used to confirm timer and clock settings.

31. POWER/SOFT button

32. LOCK
Used to lock buttons and LCD display. If pressed, the other buttons will be disabled and the lock condition display appears. Press it once again, lock will be canceled and lock condition display disappears.

33. Ambient temp.display
When receiving the remote control signal, display the set temperature and in the rest time the room temperature is displayed and this room temperature is only for reference.

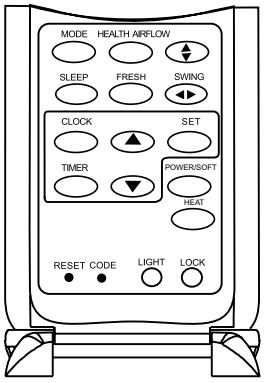
34. Remote signal receiver

35. ON-OFF button(touch key)
Used to set emergency operation and test operation.

36. HEAT button
Using for setting the fuction of Subsidiary Electric Heating.

Parts and Functions

■ Clock Set



When unit is started for the first time and after replacing batteries in remote controller, clock should be adjusted as follows:

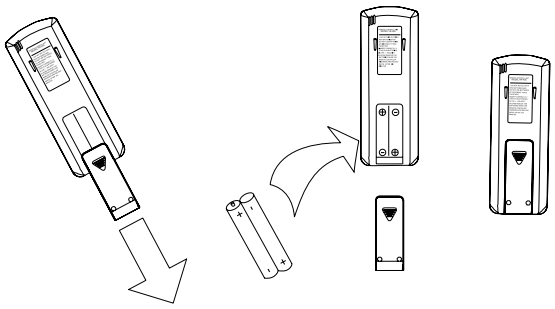
1. Press CLOCK button,"AM" or "PM" flashes.
2. Press△ or▽ to set correct time. Each press will increase or decrease 1 min. If the button is kept depressed, time will change quickly.
3. After time setting is confirmed, press SET, "AM" or "PM" stop flashing, while clock starts working.

■ Remote controller's operation

- When in use, put the signal transmission head directly to the receiver hole on the indoor unit.
- The distance between the signal transmission head and the receiver hole should be within 7m without any obstacle as well.
- Don't throw or knock the remoter controller.
- When electronic-started type fluorescent lamp or change-over type fluorescent lamp or wireless telephone is installed in the room, the receiver is apt to be disturbed in receiving the signals, so the distance to the indoor unit should be shorter.

■ Loading of the battery

Load the batteries as illustrated right
2 R-03 (7#) batteries



Remove the battery cover:
Slightly press" ∓ "area and push down the cover as illustrated.

Load the battery:
Be sure that the loading is in line with the "+" / "-". request as illustrated on the bottom of the case.

Put on the cover again.

Confirmation indicator:
After pressing power ON/OFF, if no display, reload the batteries.

Note:

- Full display or unclear display during operation indicates the batteries have been used up. Please change batteries.
- Used two new same-typed batteries when loading.
- If the remote controller can't run normally during operation, please remove the batteries and reload several minutes later.

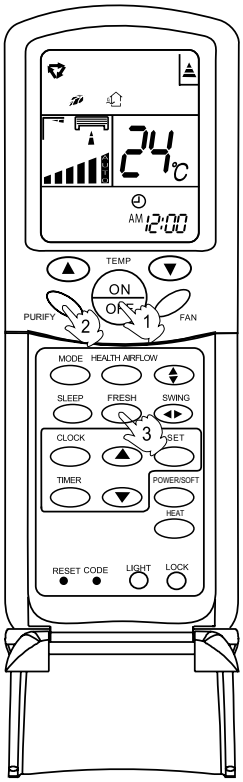
Hint:
Remove the batteries in case unit won't be in usage for a long period. If there are any display after taking-out, just need to press reset key.

Operation

HEALTH operation

Display board

Remote controller



1.Unit start

Press on/off button on the remote controller, unit starts. Health function includes health anion function.

2.AIP ionizing purification and negative ion functions

Press purification button. For each press, is displayed. Air conditioner starts health anion function operation. For twice press, disappears,the operation stops.

3.Change-for-fresh-air function(optional)

Press FRESH button , "⌂"displayed on the remote controller and the change-for-fresh-air function operation begins. For twice press , the display "⌂"disappears and the change-for-fresh-air function operation is canceled

When indoor fan motor is running, it has healthy process function. (It's available under any mode)

BRIEF INTRODUCTION TO HEALTH ANION FUCTION

The anion generator in the air conditioner can generate a lot of anion effectively balance the quantity of position and anion in the air and also to kill bacteria and speed up the dust sediment in the room and finally clean the air in the room.

About change-for-fresh-air function(optional)

1.After the change-for-fresh-air function is initiated, the outside air can enter the indoors through the change-for-fresh-air tube thereby keeping the indoor air fresh.

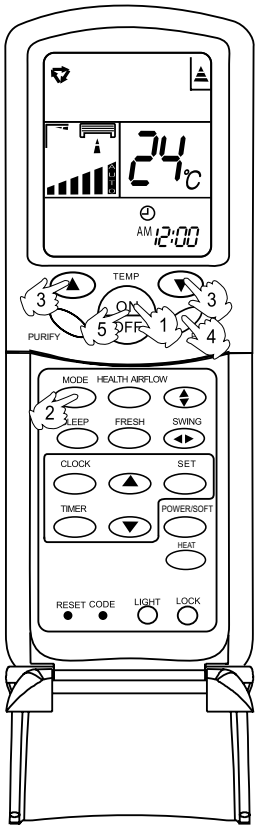
2.Setting the change-for-fresh-air function under the shutdown status: Under shutdown status, press the fresh key and the remote controller displays the on status of air flow, low wind, and change-for-fresh-air functions, and now can set the timing open, timing close and time control switch. Press on/off button to cancel the change-for-fresh-air function.

Operation

Auto Operation

Display board

Remote controller



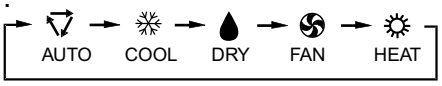
1. Unit start

Press ON/OFF on the remote controller, unit starts.

2.Select operation mode

Press MODE button. For each press, operation mode changes as follows:

Remote controller:



Then | Select Auto operation |

3.Select temp.setting

Press TEMP. button

△ Every time the button is pressed, temp.setting increase 1°C,if kept depressed, it will increase rapidly.

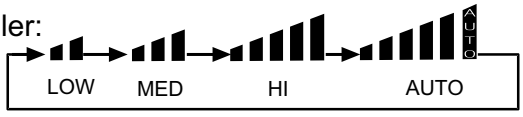
▽ Every time the button is pressed, temp.setting decrease 1°C,if kept depressed, it will decrease rapidly.

Select a desired temperature.

4.Fan speed selection

Press FAN button. For each press, fan speed changes as follows:

Remote controller:



Air conditioner is running under displayed fan speed. When FAN is set to AUTO, the air conditioner automatically adjusts the fan speed according to room temperature.

5.Unit stop

Press ON/OFF button, the unit stops.

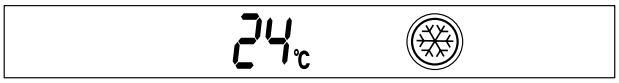
About Auto Operation

Under the mode of auto operation, air conditioner will automatically select Cool or Heat operation according to room temperature.

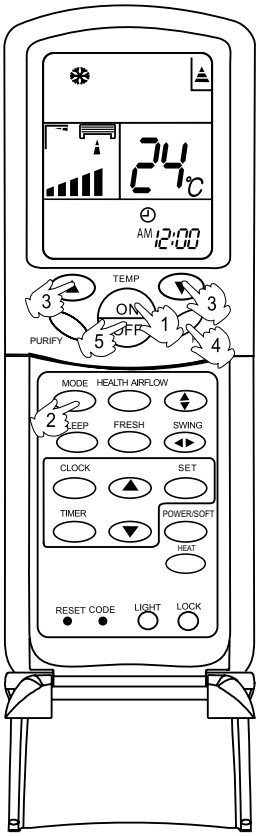
Operation

Cool Operation

Display board



Remote controller



1. Unit start

Press ON/OFF on the remote controller, unit starts.

2.Select operation mode

Press MODE button. For each press, operation mode changes as follows:

Remote controller:

Then Select COOL operation

3.Select temp.setting

Press TEMP. button

△ Every time the button is pressed, temp.setting increase 1°C,if kept depressed, it will increase rapidly

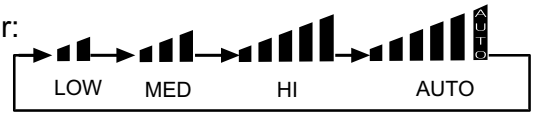
▽ Every time the button is pressed, temp.setting decrease 1°C,if kept depressed, it will decrease rapidly

Select a desired temperature.

4.Fan speed selection

Press FAN button. For each press, fan speed changes as follows:

Remote controller:



Air conditioner is running under displayed fan speed. When FAN is set to AUTO, the air conditioner automatically adjusts the fan speed according to room temperature.

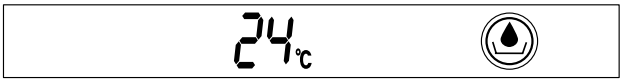
5.Unit stop

Press ON/OFF button, the unit stops.

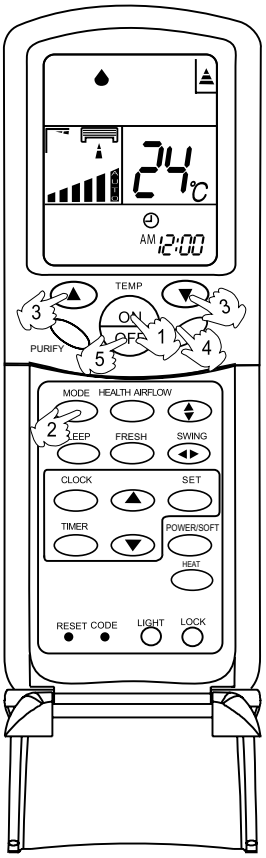
Operation

Dry Operation

Display board



Remote controller



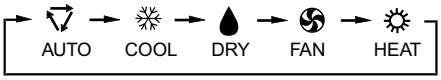
1. Unit start

Press ON/OFF on the remote controller, unit starts.

2.Select operation mode

Press MODE button. For each press, operation mode changes as follows:

Remote controller:



Then Select DRY operation

3.Select temp.setting

Press TEMP. button

△ Every time the button is pressed, temp.setting increase 1°C,if kept depressed, it will increase rapidly.

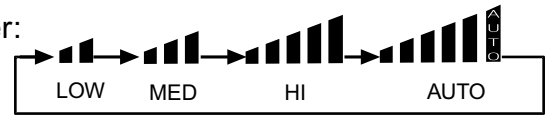
▽ Every time the button is pressed, temp.setting decrease 1°C,if kept depressed, it will decrease rapidly.

Select a desired temperature.

4.Fan speed selection

Press FAN button. For each press, fan speed changes as follows:

Remote controller:



Air conditioner is running under displayed fan speed. In DRY mode, when room temperature becomes lower than temp.setting+2°C,unit will run intermittently at LOW speed regardless of FAN setting.

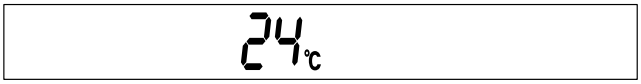
5.Unit stop

Press ON/OFF button, the unit stops.

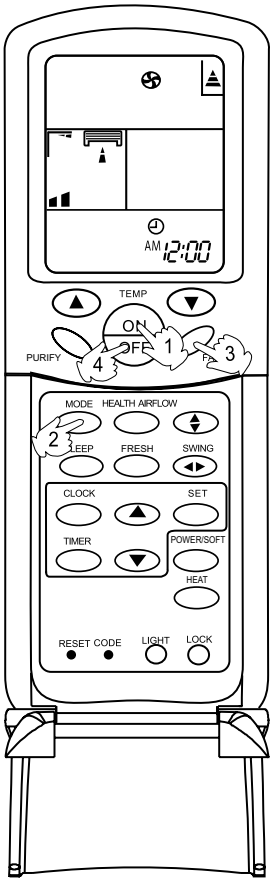
Operation

Fan Operation

Display board



Remote controller



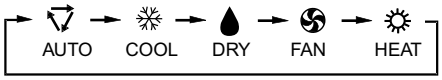
1. Unit start

Press ON/OFF on the remote controller, unit starts.

2.Select operation mode

Press MODE button. For each press, operation mode changes as follows:

Remote controller:



Then | Select FAN operation |

3.Fan speed selection

Press FAN button. For each press, fan speed changes as follows:

Remote controller:

4.Unit stop

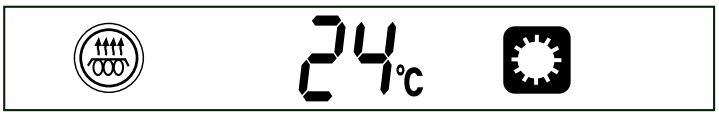
Press ON/OFF button, the unit stops.

About FAN operation

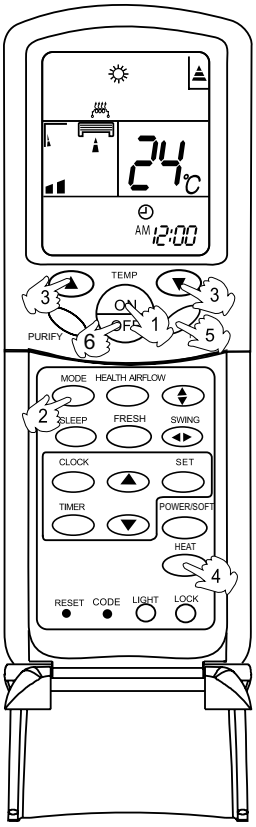
In FAN operation mode, the unit will not operate in COOL mode but only in FAN mode ,AUTO is not available in FAN mode.And temp.setting is disabled.
In FAN mode,SLEEP and POWER/SOFT operation is not available.

Operation

Heat Operation



Remote controller



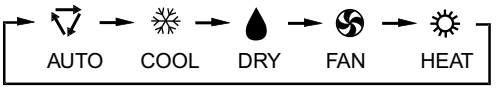
1. Unit start

Press ON/OFF on the remote controller, unit starts.

2.Select operation mode

Press MODE button. For each press, operation mode changes as follows:

Remote controller:



Then | Select HEAT operation |

3.Select temp.setting

Press TEMP. button

△ Every time the button is pressed, temp.setting increase 1°C,if kept depressed, it will increase rapidly

▽ Every time the button is pressed, temp.setting decrease 1°C,if kept depressed, it will decrease rapidly

Select a desired temperature.

4.Subsidiary electric heating function

Press the electric heating key on the remote controller, the remote controller and the control panel will display "" and " ■ " respectively, and the electric heating operation starts.

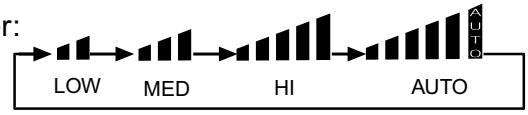
Press the electric heating key again, and the display "" and "■" on the remote controller and the control panel disappear.

The electric heating operation is finished. For subsidiary electric heating conditions, please refer to page2.

5.Fan speed selection

Press FAN button. For each press, fan speed changes as follows:

Remote controller:



Air conditioner is running under displayed fan speed IN HEAT mode, warm air will blow out after a short period of the time due to cold-draft prevention function.

When FAN is set to AUTO, the air conditioner automatically adjusts the fan speed according to room temperature.

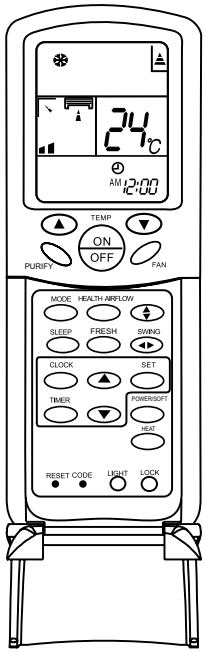
6.Unit stop

Press ON/OFF button, the unit stops.

Operation

Air Flow Direction Adjustment

1.Status display of air sending



Vertical flap

Pos.1
Pos.2
Pos.3
Pos.4
Pos.5
Pos.6 (Auto swing)

Horizontal louvers

Pos.1
Pos.2
Pos.3
Pos.4
Pos.5
Pos.6
Pos.7
Pos.8

2.Up and down air flow direction

For each press of button, air flow direction on remote controller displays as follows according to different operation modes:

COOL/DRY/FAN:
remote controller: → Pos.1 → Pos.2 → Pos.3 → Pos.4 → Pos.6

HEAT:
remote controller: → Pos.5 → Pos.4 → Pos.3 → Pos.2 → Pos.1 → Pos.6

AUTO:
remote controller: → Pos.1 → Pos.2 → Pos.3 → Pos.4 → Pos.5 → Pos.6

The vertical flap will swing according to the above positions

3.Left and right air flow direction

For each press of button, remote controller displays as follows :

remote controller:

→ Pos.1 → Pos.2 → Pos.3 → Pos.4 → Pos.5 → Pos.6 → Pos.7 → Pos.8

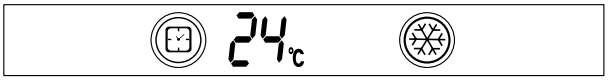
The horizontal louvers will swing according to the above positions.

Note:When restart after remote turning off, the remote controller will automatically memorize the previous set swing position.

Operation

Sleep Operation

Display board



Before going to bed, you can simply press the SLEEP button and unit will operate in SLEEP mode and bring you a sound sleep.

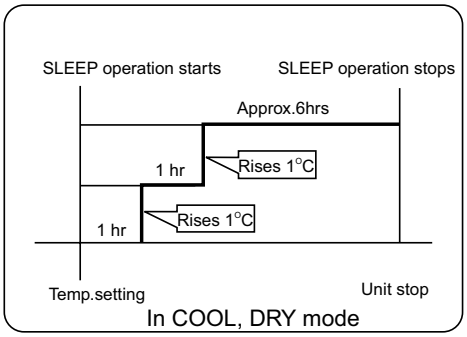
Use of SLEEP function

After the unit starts, set the operation status, then press SLEEP button before which the clock must be adjusted and time being set.

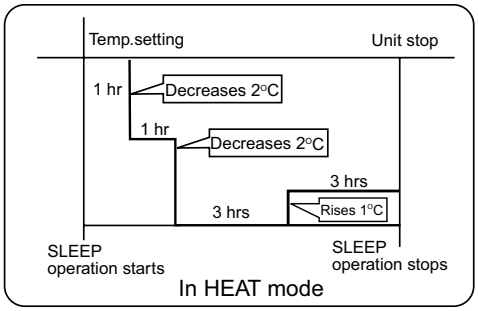
Operation Mode

1. In COOL,DRY mode

1 hours after SLEEP mode starts, temp. will become 1°C higher than temp. setting. After another 1 hours, temp. rises by 1°C further. The unit will run for further 6 hours then stops. Temp. is higher than temp. setting so that room temperature won't be too low for your sleep.

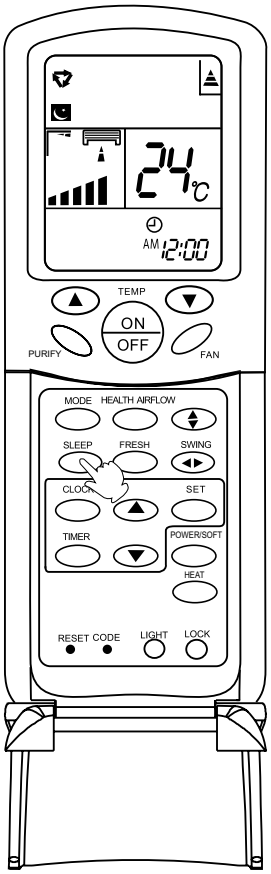


In COOL, DRY mode



In HEAT mode

Remote Controller



2. In HEAT mode

1 hours after SLEEP mode starts, temp will become 2 °C lower than temp.setting. After another 1 hours, temp decrease by 2 °C further. After more another 3 hours, temp. rises by 1°C further. The unit will run for further 3 hours then stops. Temp. is lower than temp. setting so that room temperature won't be too high for your sleep.

3. In AUTO mode

The unit operates in corresponding sleep mode adapted to the automatically selected operation mode.

4. In FAN mode

It has no SLEEP function.

5.Set the wind speed change when sleeping

If the wind speed is high or middle before setting for the sleep, set for lowing the wind speed after sleeping.

If it is low wind, no change.

6.Note to the power failure resume:

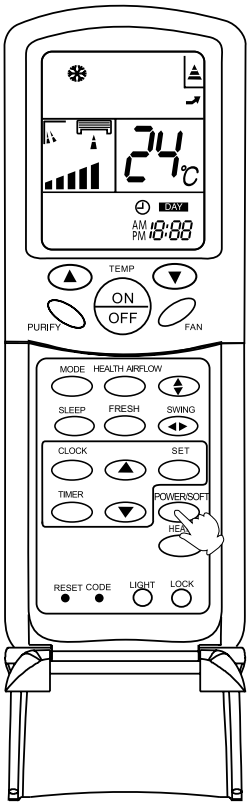
press the sleep button ten times in five seconds and enter this function after hearing four sounds. And press the sleep button ten times within five seconds and leave this function after hearing two sounds.

NOTE: With the power failure resume, when setting the TIMER ON, TIMER OFF and TIMER ON/OFF, it's memorized as shutdown status when resuming after power out.

Operation

POWER/SOFT Operation

Remote controller

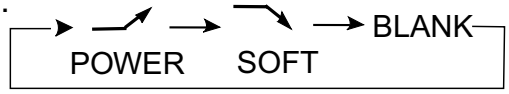


POWER Operation

When you need rapid cooling, you can use this funciton.

Selecting of POWER operation

Press POWER/SOFT button. Every time the button is pressed,display changes as follows:



Stop the display at" ↗ ".

In POWER operation status:

In HEAT or COOL mode, fan speed automatically runs in HI mode for 15 min then returns to original status setting.

To cancel POWER operation

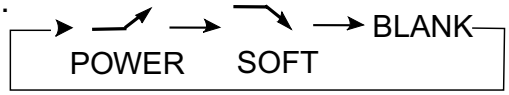
Press POWER/SOFT button twice ,POWER/SOFT disappears.

SOFT Operation

You can use this function when silence is needed for rest or reading.

Selecting of SOFT operation

Press POWER/SOFT button. Every time the button is pressed,display changes as follows:



Stop the display at " ↘ ".

In SOFT operation mode, fan speed automatically takes"LOW"

To cancel SOFT operation

Press POWER/SOFT button twice ,POWER/SOFT disappears.

Hints:

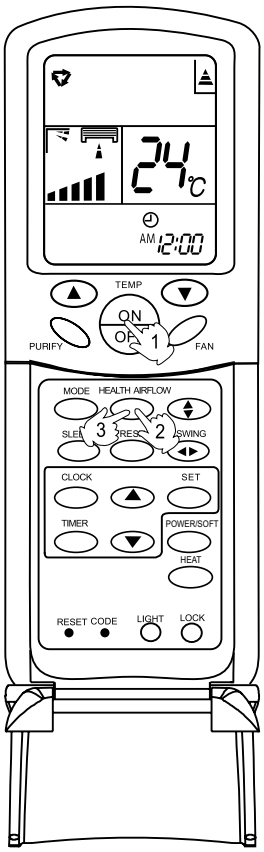
During POWER operation, in rapid Heat or COOL mode, the room will show inhomogeneous temperature distribution.

Long period SOFT operation will cause effect of not too cool.

Operation

Health airflow Operation

Remote controller



1.Press ON/OFF to starting
The liquid crystal will display the working state of last time
(Except timer, sleeping, power/soft and health airflow).
Setting the comfort work conditions.

2.The setting of health airflow function

1).Press the button of health airflow, appears on the display. The nether inlet and outlet grills of the air conditioner are closed and the airflow is blown horizontally from the above inlet and outlet grills. Avoid the strong airflow blows direct to the body.

2).Press the button of health airflow again, appears on the display. The above inlet and outlet grills of the air conditioner are closed and the airflow is blown vertically from the nether inlet and outlet grills. Avoid the strong airflow blows direct to the body.

3.The cancel of the health airflow function

Press the button of health airflow again, both the inlet and outlet grills of the air conditioner are opened, and the unit goes on working under the condition before the setting of health airflow function.
After stopping, the outlet grille will close automatically.
Notice: Cannot pull direct the outlet grille by hand. Otherwise, the grille will run incorrectly. If the grille is not run correctly, stop for a minute and then start, adjusting by remote controller.

Note:

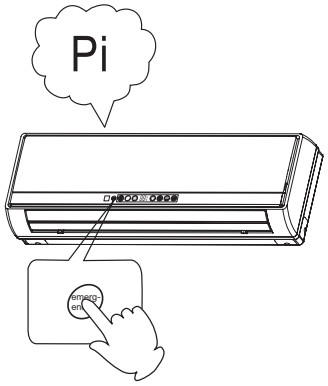
1 .After setting the health airflow function, the position of inlet and outlet grills is fixed.
2.In heating, it is better to select the mode.
3.In cooling, it is better to select the mode.
4.In cooling and dry, using the air conditioner for a long time under the high air humidity, a phenomenon falling drips of water occurs at the outlet grille .
5.Select the appropriate fan direction according to the actual conditions.

Operation

Emergency and Test Operation

Emergency operation:

- Use this operation only when the remote controller is defective or lost.
- When the emergency operation switch is pressed,the" Pi "sound is heard once, which means the start of this operation.
- In this operation, the system automatically selects the operation modes, cooling or fan, according to the room temperature.



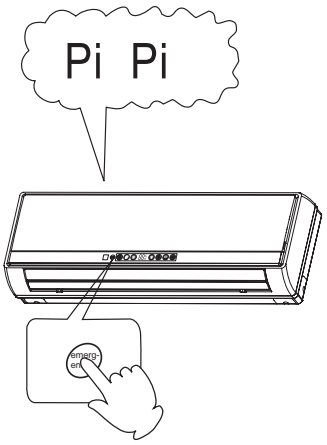
Temperature	Operation mode	Designated temperature	Timer mode	Air flow
ABOVE 21°C	COOLING	24°C	NO	AUTOMATIC
BELOW 21°C	FAN	24°C	NO	AUTOMATIC

- It is not possible to operate in dry mode.

Test operation:

Test operation switch is the same as emergency switch.

- Use this switch in the test operation when the room temperature is below 16°C, do not use it in the normal operation.
- Continue to press the test operation switch for more than 5 seconds. After you hear the "Pi" sound twice, release your finger from the switch: the cooling operation starts with the air flow speed "Hi".
- After 30 minutes, test operation ends automatically.



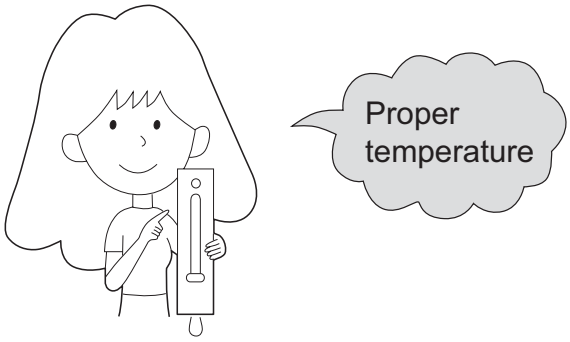
Removal of the restriction of emergency or test operation

- Press the emergency operation switch once more, or manipulate through the remote controller; the "Pi" sound, the emergency or test operation is terminated.
- When the remote controller is manipulated, it gets the system back to the normal operation mode.

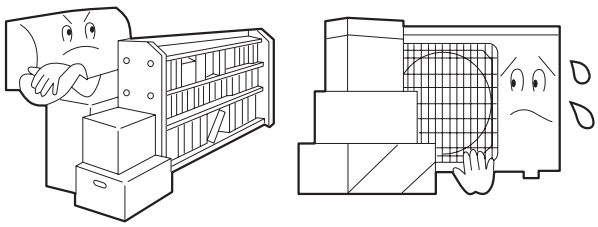
Maintenance

For Smart Use of The Air Conditioner

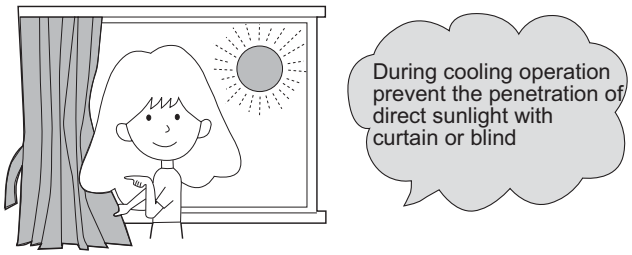
Setting of proper room temperature



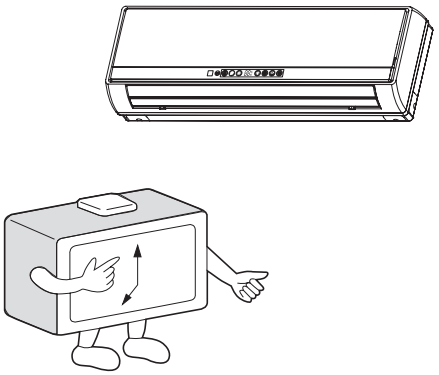
Do not block the air inlet or outlet



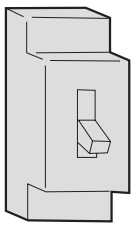
Close doors and windows during operation



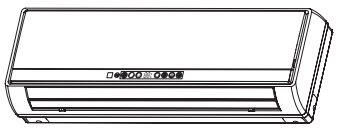
Use the timer effectively



If the unit is not to be used for a long time, turn off the power supply main switch.



Use the louvers effectively



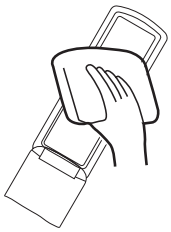
Maintenance

For Smart Use of The Air Conditioner

⚠ WARNING

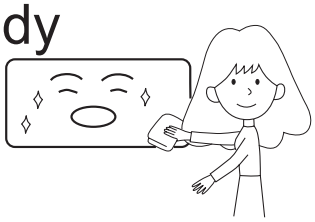
Before maintenance,be sure to turn off the system and the circuit breaker.

Remote Controller



Do not use water, wipe the controller with a dry cloth.Do not use glass cleaner or chemical cloth.

Indoor Body



Wipe the air conditioner by using a soft and dry cloth.For serious stains,use a neutral detergent diluted with water.Wring the water out of the cloth before wiping.then wipe off the detergent completely.

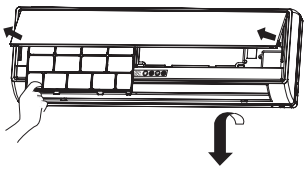
Do not use the following for cleaning

Gasoline,benzine, thinner or cleanser may damage the coating of the unit.

Hot water over 40°C(104°F) may cause discoloring or deformation.

Air Filter cleaning

1 Open the inlet grille by pulling it upward.



2 Remove the filter.

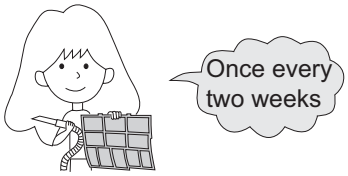
Push up the filter's center tab slightly until it is released from the stopper, and remove the filter downward.

3 Clean the filter.

Use a vacuum cleaner to remove dust, or wash the filter with water.After washing, dry the filter completely in the shade.

4 Attach the filter.

Attach the filter correctly so that the "FRONT" indication is facing to the front.Make sure that the filter is completely fixed behind the stopper.If the right and left filters are not attached correctly, that may cause defects.



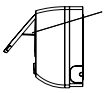
5 Close the inlet grille.

Maintenance

The installation and cleanout AIP layer, VC layer + Bacteria-killing medium sets

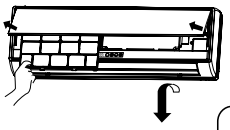
1.Open the Inlet Grille

The inlet grill is supported by its top plate at the right side.



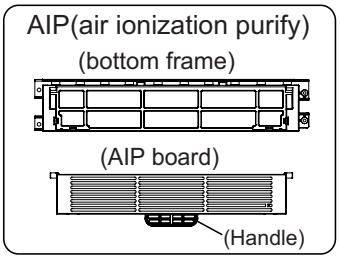
2.Detach the standard air filter

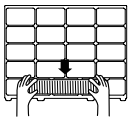
Push up the filter's center tab slightly until it is released from the stopper, and remove the filter downward.



3.Take the VC layer + Bacteria-killing medium sets

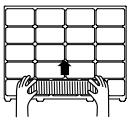
Take out Take the VC layer or the Bacteria-killing medium sets from the filter. Push the bottom frame of AIP layer, and push up the handle at the same time in order take out the AIP layer board in turns.

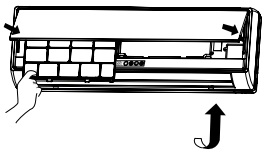




Note:the green aspect of the bacteria-killing medium air purifying filter will face outside, the white aspect will face to the machine. The yellow aspect of the VC layer will face outside, the white aspect will face to the machine.

4. The installation of AIP layer,VC layer + Bacteria-killing medium sets (must be installed)





5.Close the Inlet Grille

Put down the inlet grill's top plate, and close the inlet grill.

➢ Common sense:

- In order to keep the AIP layer having a highly work effect ,it should be cleaned regularly or aperiodically just according to the working environment.
  1. Turn off the A/C electricity supply and make sure that AIP layer is not working.Then clean the AIP layer after turning off it five minutes later.
  2. Please brush off the dust on AIP board,then steep it into cleaning agent water and wash it.
  3. After cleaning AIP board pleas put it on a dry place until it is totally dry.
  4. Ensure AIP board is dry enough then install it in the its position along the slide way . Make sure it is as before and could work well.
- The AIP layer will be replaced in fixed time. In normal family, it will be replaced every 6 months.
- In the use, please note to clean the filter frequently (take off the back suction cleaner or lightly pat it) to avoid the operating effect is lowered due to the dust covering the filter. AIP layer and bacteria-killing medium filter is strictly prohibited from being cleaned by water.
  The the bacteria-killing medium filter not in use should be stored in shade, cool and dry place.
  Please don't expose it to the sunlight for a long time otherwise the degerming performance will drop.

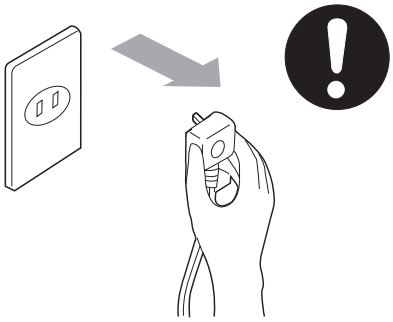
Maintenance

To Keep Your Air conditioner in Good Condition after Season.

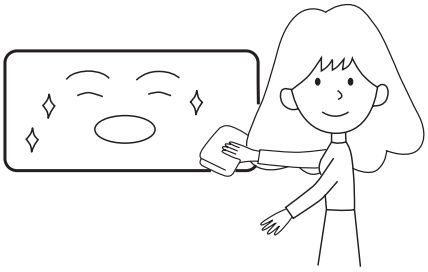
1 Operate in cooling mode for 2-3 hours.

To prevent breeding mold or bad smell, be sure to operate at the designated temperature or 30°C,cooling mode and High speed fan mode for 2-3 hours.

2 Put off the power supply cord.



3 Cleaning the body.



4 Take out the batteries from the wireless remote controller.

Maintenance

Before Setting in High season

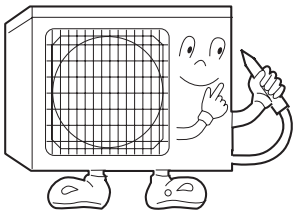
1 Cleaning the standard air filter.

Operation without filter may cause troubles.Be sure to attach both right and left filters prior to the operation. Each of them are of different shapes.

2 Connecting the earthing cable.

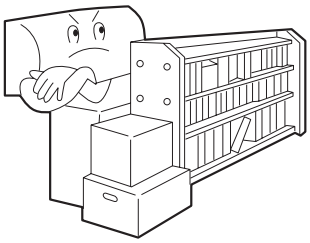
⚠ Caution

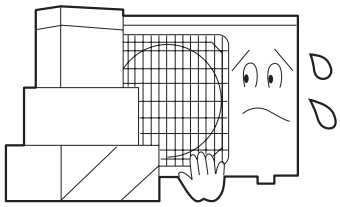
- Incomplete earthing may cause an electric shock.



EARTHING

3 Do not block the air inlet or outlet.





4 Plug-in

⚠ Caution

- After brush away dust at the plug, insert the plug of the power supply cord into the outlet completely.In case of suing exclusive circuit breaker,switch on the circuit breaker.

NO WET HAND

Trouble shooting

Before asking for service, check the following first.

	Phenomenon	Cause or check points
Normal Performance inspection	The system does not restart immediately. 	• When unit is stopped, it won't restart immediately until 3 minutes have elapsed to protect the system. • When the electric plug is pulled out and reinserted, the protection circuit will work for 3 minutes to protect the air conditioner.
	Noise is heard: 	• During unit operation or at stop, a swishing or gurgling noise may be heard. At first 2-3 minutes after unit start, this noise is more noticeable. (This noise is generated by refrigerant flowing in the system.) • During unit operation, a cracking noise may be heard. This noise is generated by the casing expanding or shrinking because of temperature changes. • Should there be a big noise from air flow in unit operation, air filter may be too dirty.
	Smells are generated.	• This is because the system circulates smells from the interior air such as the smell of furniture, cigarettes.
	Mist or steam are blown out.	• During COOL or DRY operation, indoor unit may blow out mist. This is due to the sudden cooling of indoor air.
Multiple check	Does not work at all.	• Is power plug inserted? • Is there a power failure? • Is fuse blown out?
	Poor cooling 	• Is the air filter dirty? Normally it should be cleaned every 15 days. • Are there any obstacles before inlet and outlet? • Is temperature set correctly? • Are there some doors or windows left open? • Is there any direct sunlight through the window during the cooling operation?(Use curtain) • Are there too much heat sources or too many people in the room during cooling operation?

7 Service Diagnosis

7.1 Caution for Diagnosis

The operation lamp flashes when any of the following errors is detected.

1. When a protection device of the indoor or outdoor unit is activated or when the thermistor malfunctions, disabling equipment operation.
2. When a signal transmission error occurs between the indoor and outdoor units.

In either case, conduct the diagnostic procedure described in the following pages.

7. 2 Problem Symptoms and Measures

Symptom	**Check Item**	**Details of Measure**	Reference page
None of the units operates	Check the power supply.	Check to make sure that the rated voltage is supplied.	----
	Check the indoor PCB	Check to make sure that the indoor PCB is broken	----
Equipment operates but does not cool, or does not heat (only for heat pump)	Diagnosis by service port pressure and operating current.	Check for insufficient gas.	----
			----
Large operating noise and vibrations	Check the installation condition.	Check to make sure that the required spaces for installation (specified in the Technical Guide, etc.) are provided.	----

7.3 Troubleshooting

7.3.1 Error Codes and Description

	Code indication	Description	Reference Page
	indoor		
Indoor Malfunction	E1	Room temperature sensor failure	**52**
	E2	Heat-exchange sensor failure	**52**
	E4	Indoor EEPROM error	**53**
	E14	Indoor fan motor malfunction	**53**

The code indication that is listed above is the main fault

7.3.2 Thermistor or Related Abnormality (indoor unit)

Indoor Display E1 E2

Method of Malfunction Detection the temperatures detected by the thermistors are used to determine thermistor errors

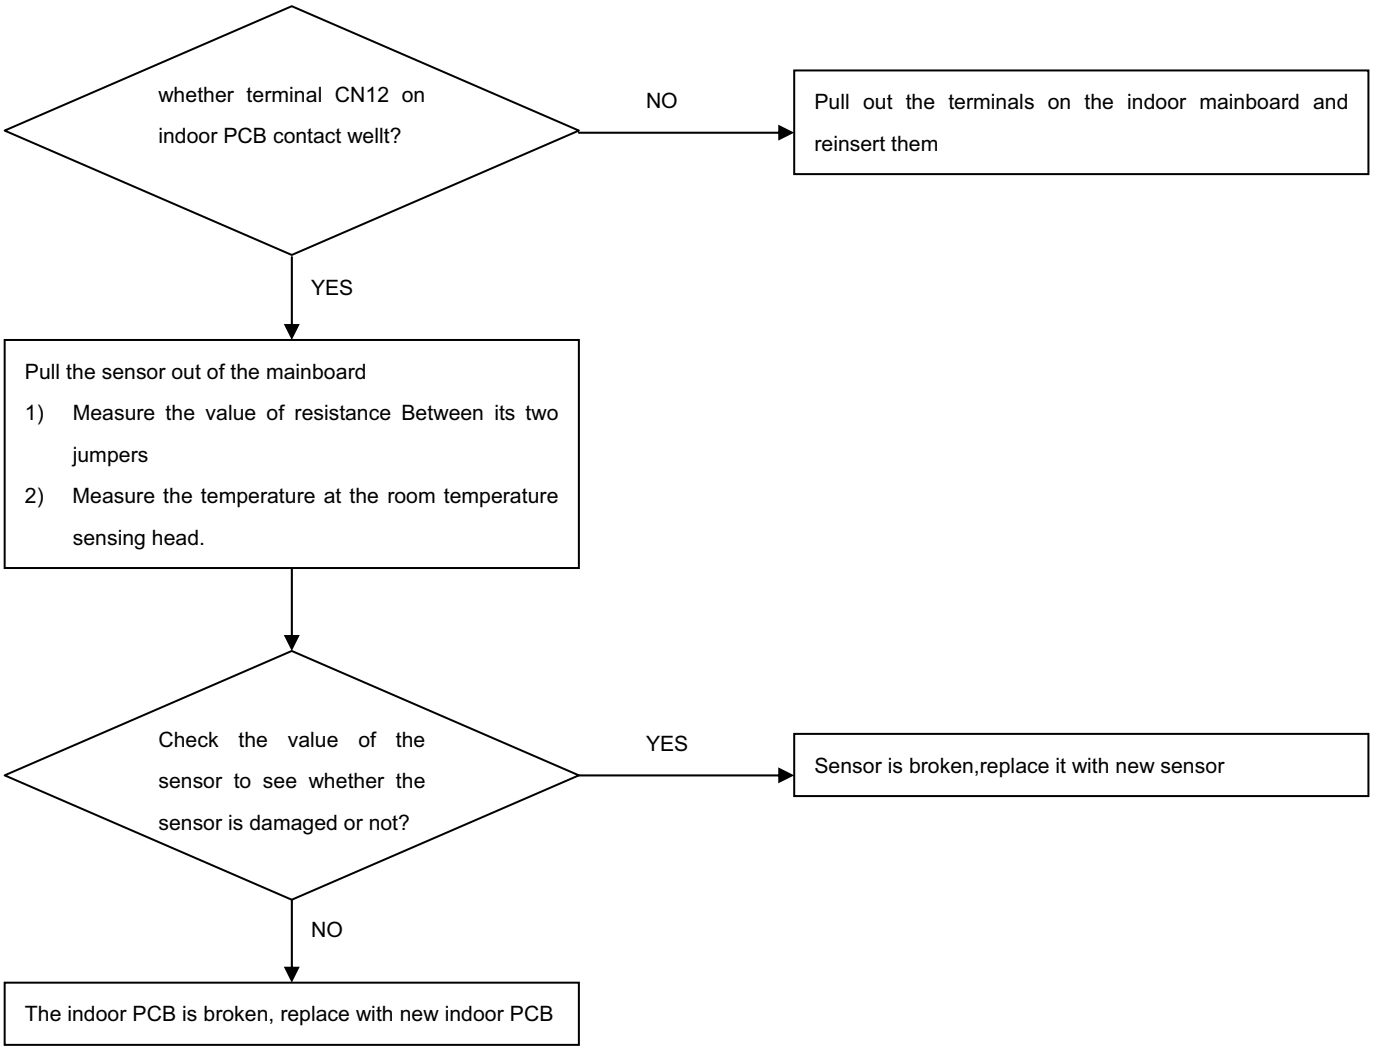
Malfunction Decision Conditions when the thermistor input is more than 4.92V or less than 0.08V during compressor operation.

* Note: The values vary slightly in some models

Supposed Causes

- Faulty connector connection
- Faulty thermistor
- Faulty PCB

Troubleshooting * **Caution**" "Be sure to turn off power switch before connect or disconnect connector, or else parts damage may be occurred.



notes:

E1: Room temperature sensor failure
E2: Indoor heat-exchange sensor failure

7.3.3 Indoor EEPROM error

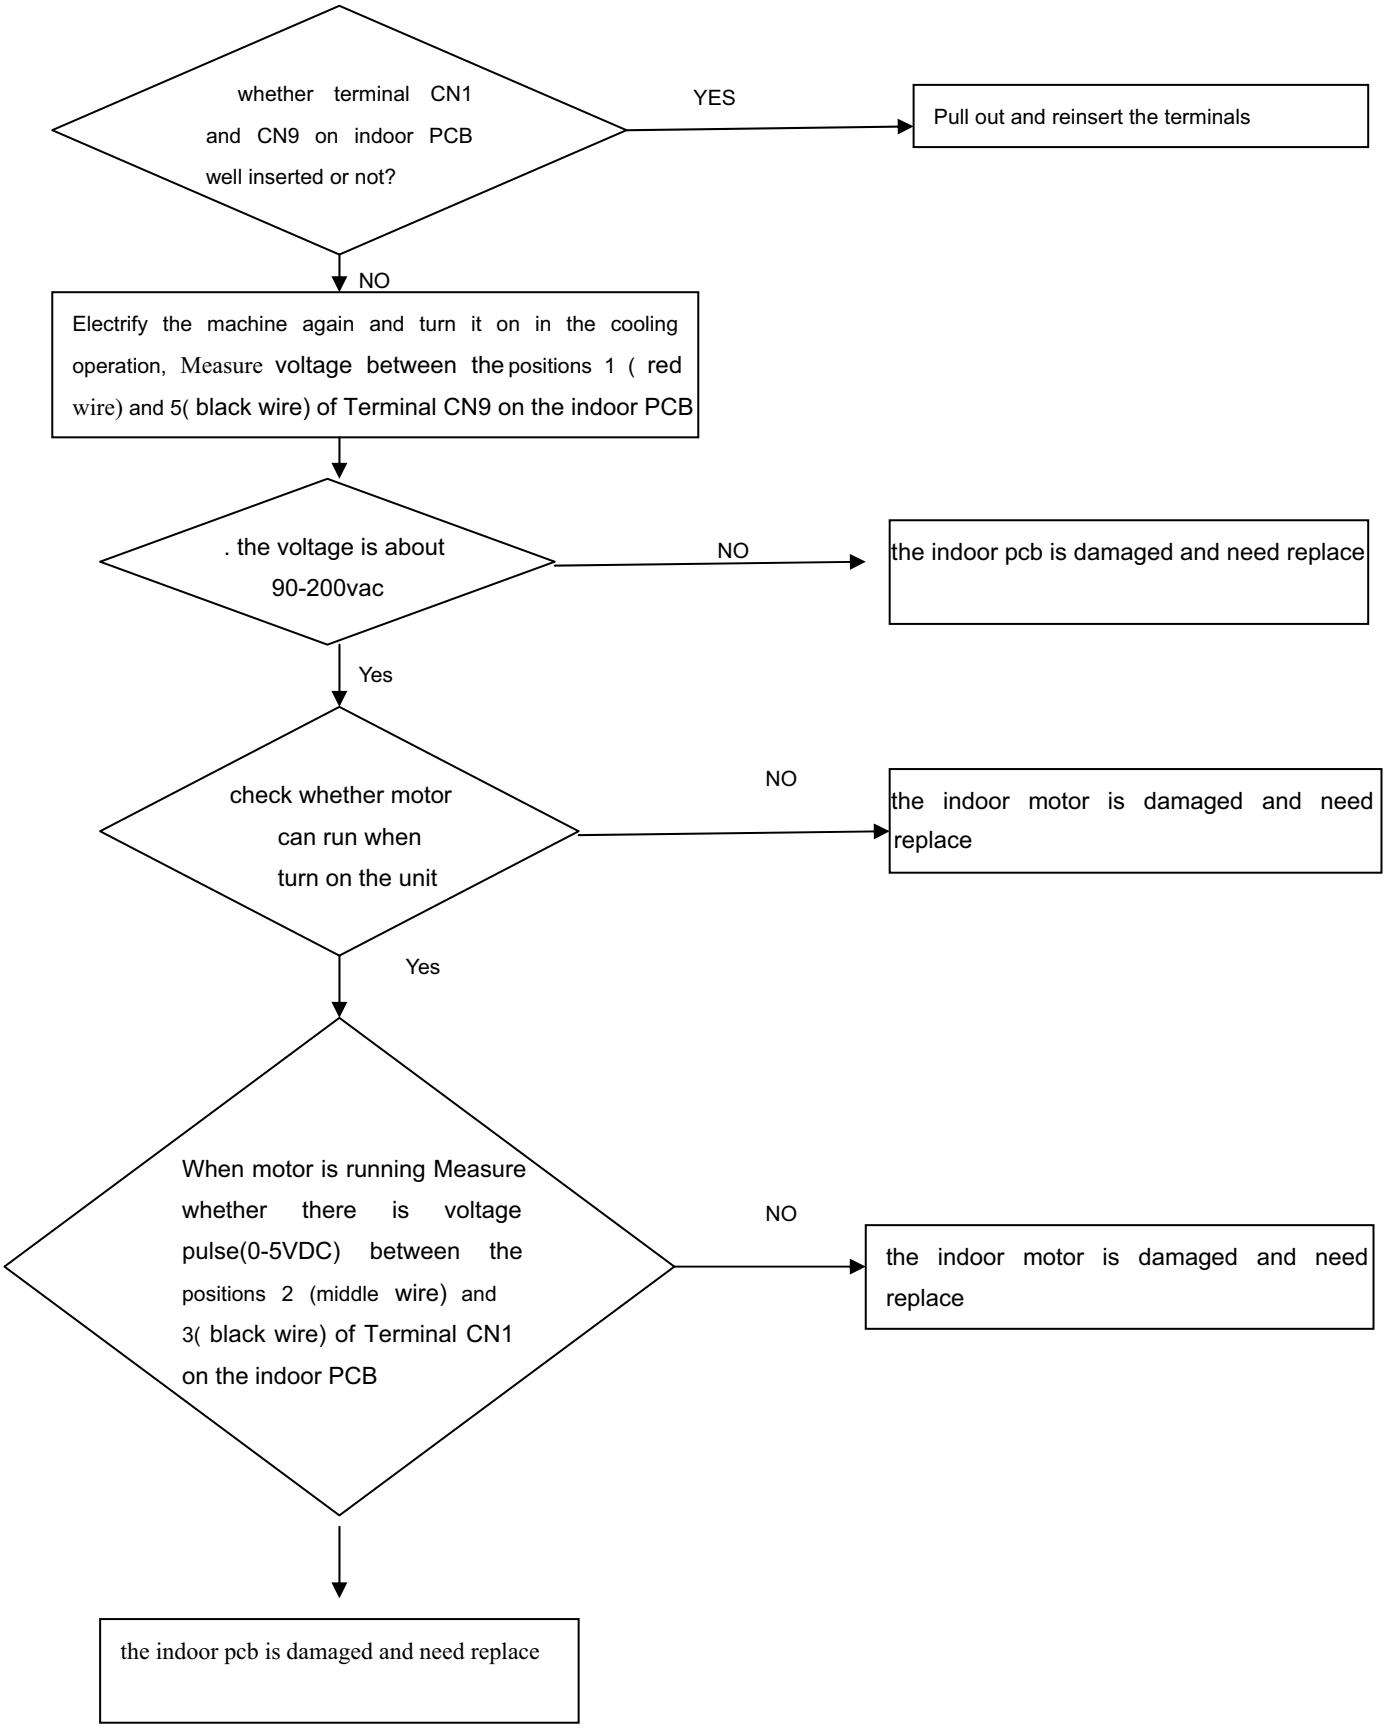
Indoor Display	E4
Method of Malfunction Detection	The date received from EEPROM is checked whether normal
Malfunction Decision Conditions	When the date sent from EEPROM cannot be received normally , or when EEPROM is not detected
Supposed Causes	■ Faulty PCB

Troubleshooting Replace the PCB of indoor unit

7.3.4 Fan Motor(AC Motor) or Related Abnormality

Indoor Display	E14
Method of Malfunction Detection	The rotation speed detected by the Hall IC during fan motor operation is used to determine abnormal fan motor operation
Malfunction Decision Conditions	when the detected rotation feedback singal don't receiced in 2 minutes
Supposed Causes	■Operation halt due to short circuit inside the fan motor winding. ■Operation halt due to breaking of wire inside the fan motor . ■Operation halt due to breaking of the fan motor lead wires ■Dedection error due to faulty indoor unit PCB

Troubleshooting



8 Installation

- Read this manual before installation
- Explain sufficiently the operating means to the user according to this manual.

Necessary Tools for Installation

1.Driver
2.Hacksaw
3.Hole core drill
4.Spanner(17,19 and 26mm)
5.Torque wrench(17mm,22mm,26mm)
6.Pipe cutter
7.Flaring tool
8.Knife
9.Nipper
10.Gas leakage detector or soap-and-water solution
11.Measuring tape
12.Reamer

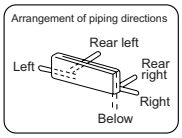
Drawing for the installation of indoor and outdoor units

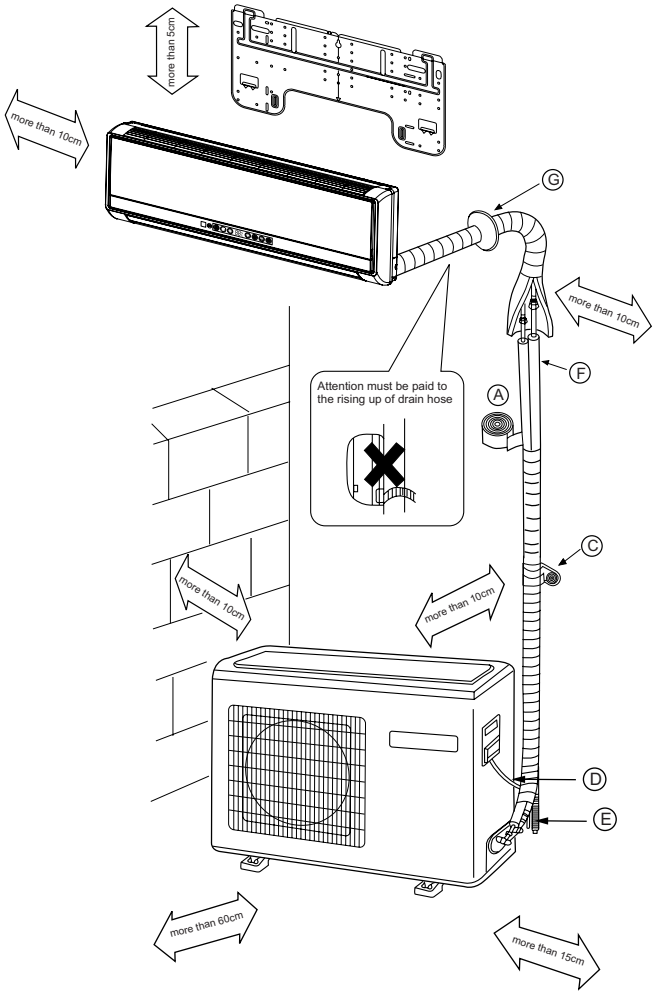
Accessory parts

No.	Accessory parts	Number of articles
①	Remote controller	1
②	R-03 dry battery	2
③	Mounting plate	1
④	Drain hose	1
⑤	Φ4X50 Steel nail, cement	6
⑥	Φ4X25 Screw, Plastic cap	4
⑦	Drain-elbow	1
⑧	Cover	1
⑨	Cushion	4

Optional parts for piping

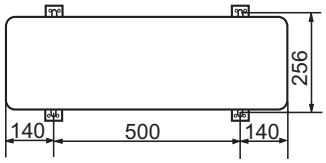
Mark	Parts name
Ⓐ	Non-adhesive tape
Ⓑ	Adhesive tape
Ⓒ	Saddle(L.S) with screws
Ⓓ	Connecting electric cable for indoor and outdoor
Ⓔ	Drain hose
Ⓕ	Heating insulating material
Ⓖ	Piping hole cover



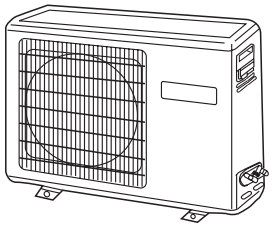


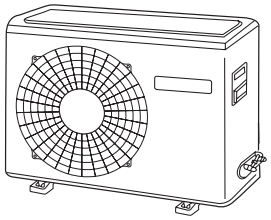
※ The marks from Ⓐ to Ⓖ in the figure are the parts numbers.

※ The distance between the indoor unit and the floor should be more than 2m.



Floor fixing dimensions of the outdoor unit (Unit:mm)





Fixing of outdoor unit

- Fix the unit to concrete or block with bolts(ϕ10mm) and nuts firmly and horizontally.
- When fitting the unit to wall surface, roof or rooftop, fix a supporter surely with nails or wires in consideration of earthquake and strong wind.
- If vibration may affect the house, fix the unit by attaching a vibration-proof mat.

Selection of Installation Place

Indoor Unit

- Place, robust not causing vibration, where the body can be supported sufficiently.
- Place, not affected by heat or steam generated in the vicinity, where inlet and outlet of the unit are not disturbed.
- Place, possible to drain easily, where piping can be connected with the outdoor unit.
- Place, where cold air can be spread in a room entirely.
- Place, nearby a power receptacle, with enough space around. (Refer to drawings).
- Place where the distance of more than lm from televisions, radios, wireless apparatuses and fluorescent lamps can be left.
- In the case of fixing the remote controller on a wall, place where the indoor unit can receive signals when the fluorescent lamps in the room are lightened.

Outdoor Unit

- Place, which is less affected by rain or direct sunlight and is sufficiently ventilated.
- Place, possible to bear the unit, where vibration and noise are not increased.
- Place, where discharged wind and noise do not cause a nuisance to the neighbors.
- Place, where a distance marked is available as illustrated in the above figure.

Power Source

- Before inserting power plug into receptacle, check the voltage without fail. The power source is the same as the corresponding name plate.
- Install an exclusive branch circuit of the power.
- A receptacle shall be set up in a distance where the power cable can be reached. Do not extend the cable by cutting it.

Selection of pipe

- To this unit, both liquid and gas pipes shall be insulated as they become low temperature in operation.
- Use optional parts for piping set or pipes covered with equivalent insulation material.
- The thickness of the pipe must be 0.8 mm at least.

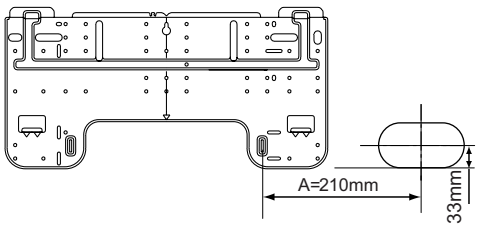
	For 09	For 12
Liquid pipe(ϕ)	6.35mm(1/4")	6.35mm(1/4")
Gas pipe(ϕ)	9.52mm(3/8")	12.7mm(1/2")

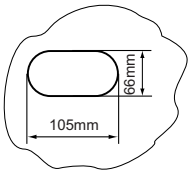
Indoor unit

1.Fitting of the Mounting Plate and Positioning of the wall Hole

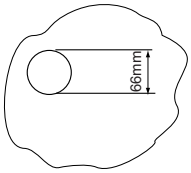
When the mounting plate is first fixed

1. Carry out, based on the neighboring pillars or lintels, a proper leveling for the plate to be fixed against the wall, then temporarily fasten the plate with one steel nail.
2. Make sure once more the proper level of the plate, by hanging a thread with a weight from the central top of the plate, then fasten securely the plate with the attachment steel nail.
3. Find the wall hole location A using a measuring tape





For the units with fresh air function

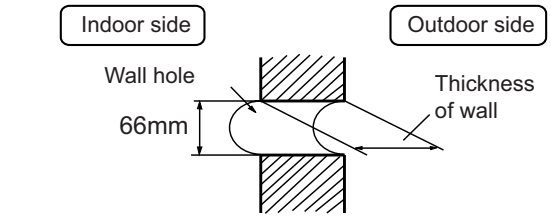


When the mounting plate is fixed side bar and lintel

- Fix to side bar and lintel a mounting bar, Which is separately sold, and then fasten the plate to the fixed mounting bar.
- Refer to the previous article, " When the mounting plate is first fixed ", for the position of wall hole.

2.Making a Hole on the Wall and Fitting the Piping Hole Cover

- Make a hole of 66 mm in diameter, slightly descending to outside the wall.
- Install piping hole cover and seal it off with putty after installation



(Section of wall hole) Ⓖ Piping hole pipe

3.Installation of the Indoor Unit

Drawing of pipe

[Rear piping]

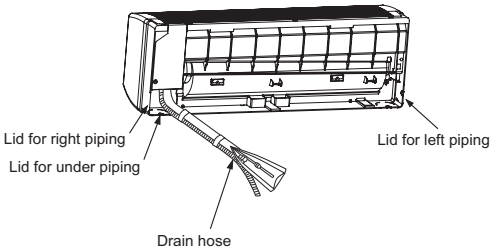
- Draw pipes and the drain hose, then fasten them with the adhesive tape

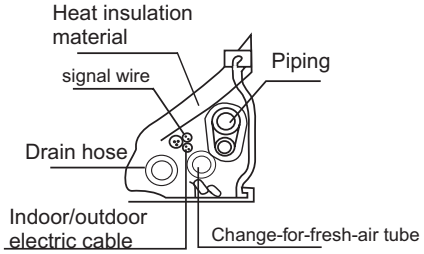
[Left • Left-rear piping]

- In case of left side piping, cut away, with a nipper, the lid for left piping.
- In case of left-rear piping, bend the pipes according to the piping direction to the mark of hole for left-rear piping which is marked on heat insulation materials.

Indoor unit

1. Insert the drain hose into the dent of heat insulation materials of indoor unit.
2. Insert the indoor/outdoor electric cable from backside of indoor unit, and pull it out on the front side, then connect them.
3. Coat the flaring seal face with refrigerant oil and connect pipes.
   Cover the connection part with heat insulation materials closely, and make sure fixing with adhesive tape





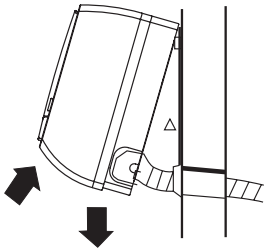
- Indoor/outdoor electric cable and drain hose must be bound with refrigerant piping by protecting tape.

[Other direction piping]

- Cut away, with a nipper, the lid for piping according to the piping direction and then bend the pipe according to the position of wall hole. When bending, be careful not to crash pipes.
- Connect beforehand the indoor/outdoor electric cable, and then pull out the connected to the heat insulation of connecting part specially.

Fixing the indoor unit body

- Hang surely the unit body onto the upper notches of the mounting plate. Move the body from side to side to verify its secure fixing.
- In order to fix the body onto the mounting plate,hold up the body aslant from the underside and then put it down perpendicularly.

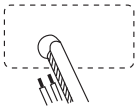


4.Connecting the indoor/outdoor Electric Cable

Removing the wiring cover

- Remove terminal cover at right bottom corner of indoor unit, then take off wiring cover by removing its screws.

When connecting the cable after installing the indoor unit



1. Insert from outside the room cable into left side of the wall hole, in which the pipe has already existed.
2. Pull out the cable on the front side, and connect the cable making a loop.

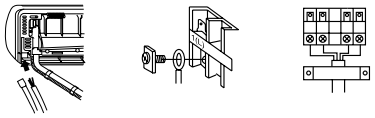
When connecting the cable before installing the indoor unit

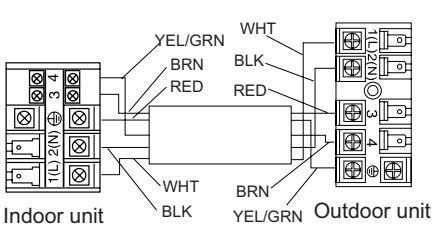
- Insert the cable from the back side of the unit, then pull it out on the front side.
- Loosen the screws and insert the cable ends fully into terminal block, then tighten the screws.
- Pull the cable slightly to make sure the cables have been properly inserted and tightened.
- After the cable connection, never fail to fasten the connected cable with the wiring cover.

Note: When connecting the cable, confirm the terminal number of indoor and outdoor units carefully.
If wiring is not correct, proper operation can not be carried out and will cause defect.

Indoor unit

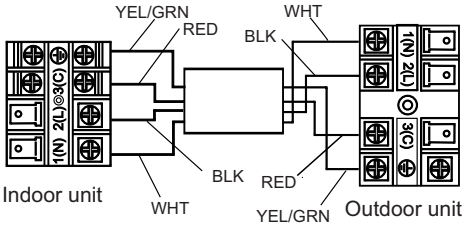
1. If the supply cord is damaged, it must be replaced by the manufacturer or its service agent or a similar qualified person. The type of connecting wire is H05RN-F or H07RN-F.
2. If the fuse on PC board is broken please change it with the type of T. 3.15A/250V.
3. The wiring method should be in line with the local wiring standard.
4. After installation, the power plug should be easily reached.
5. A breaker should be incorporated into fixed wiring. The breaker should be all-pole switch and the distance between its two contacts should be not less than 3mm.





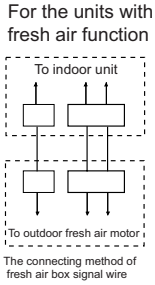
HSU-09H03/R(QXF)
HSU-12H03/R(QXF)

Connecting wiring: ⩾5G1.0mm²+1x0.75mm²
Power cable: ⩾3G1.5mm²



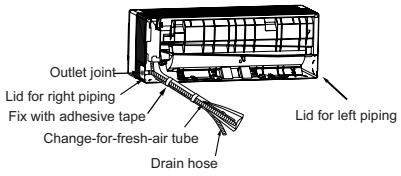
HSU-09H03/R(DB)
HSU-12H03/R(DB)

Connecting wiring: ⩾3G1.5mm²+2x0.75mm²
Power cable: ⩾3G1.5mm²

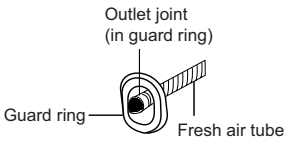


5.Installation instruction on the indoor part of the fresh air device

Two ways for the installation of indoor part, as illustrated:
Way One : When the pipes go from the back of the indoor unit, you can connect the fresh air tube with the outlet joint on the two sides of the frame,and then fix it at the pipe exit of the frame
Way Two : When installing the side outlet pipe,connect the fresh tube and the outlet joint ,and then fix it on the left side or right side of the frame.Outlet pipe is connected with the pipe hole cover by the pipe lid.



Installation way One



Installation way Two

- See the Installation from the fresh air sets for the installation of outdoor unit.

6.Easily-demount cleaning of indoor unit

1.Top inlet can be taken down

Open the inlet grille, press the claw of the clip on the unit,then take down the top inlet.(according to figure 1)

2.Vertical flap can be taken down

Overturn the vertical flap, press the claw of the clip ,then take down vertical flap.(according to figure 2)

3.Horizontal louvers can be taken down

After taking down vertical flap.Horizontal louvers are appeared,draw the middle louver,and take down the horizontal louvers . (according to figure 3)

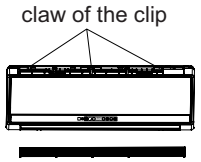


Figure 1

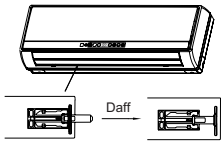

Figure 2

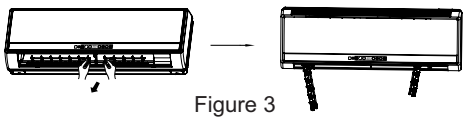

Figure 3

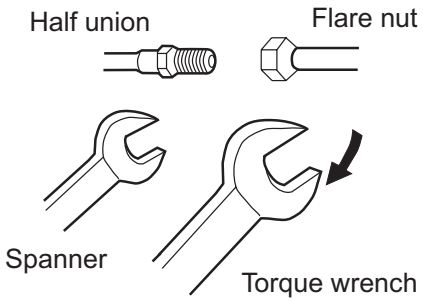
Outdoor unit

1.Installation of Outdoor Unit

Install according to (Drawing for the installation of indoor and outdoor units)

2.Connection of pipes

- To bend a pipe, give the roundness as large as possible not to crush the pipe
- Connecting the pipe of gas side first makes working easier.
- The max vertical distance between the indoor unit and the outdoor unit is 5 m.



Forced fastening without careful centering may damage the threads and cause a leakage of gas.

Pipe Diameter (ϕ)	Fastening torque
Liquid side 6.35mm(1/4")	18N.m
Gas side 9.52mm(3/8")	40N.m
Gas side 12.7mm(1/2")	55N.m

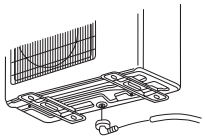
Be careful that matters, such as wastes of sands, etc. shall not enter the pipe.

3.Connection

- Use the same method on indoor unit. Loosen the screws on terminal block and insert the plugs fully into terminal block, then tighten the screws.
- Insert the cable according to terminal number in the same manner as the indoor unit.
- If wiring is not correct, proper operation can not be carried out and controller may be damaged.
- Fix the cable with a clamp.

4.Attaching Drain-Elbow

- If the drain-elbow is used, please attach it as figure. (Note: Only for heat pump unit.)



Outdoor unit

6.Purging Method:To use vacuum pump

Push the air out of the indoor unit and piping as followes:

(1) Remove the valve cap on 2-way valve in outdoor unit.

(2) Loosen by 1/2 turn the flare nut of gas pipe, which is conneted to 3-way valve.

(3) Loosen 2-way valve by 90° using hexagon wrench, and after approx. 10 sec tighten it up. Gas comes out through flare nut on wide pipe. If no gas is discharged, tighten flare nut with specified torque.

(4) Open 2-way and 3-way valves using specified torque.

(5) Tighten the caps on the valves with specified torque.

	Tighten torque N.m
Valve rod	7-9
Valve cap	20-25

- When connecting pipe exceeds 5 meters, 16g refrigerant shall be added per exceeding meter. Charge according to the following list.

Piping length	5m	7m	10m
Additional amount	No need	32g	80g

- Note: When extending piping, air inside piping shall be removed by using external refrigerant gas, charge according to the following list.

Brand new outdoor unit is charged 50g more refrigerant than regulated weight、
Only for first installation, this extra 50g can be used to purge air in pipes.

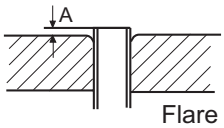
★ 1 During this procedure, 50g refrigerant will be discharged in piping.
(This must be strictly controlled within 90° and 10 sec.)

1.Power Source Installation

- The power source must be exclusively used for air conditioner. (Over I0A)
- In the case of installing an air conditioner in a moist place, please install an earth leakage breaker.
- For installation in other places, use a circuit breaker as far as possible.

2.Cutting and Flaring Work of Piping

- Pipe cutting is carried out with a pipe cutter and burs must be removed.
- After inserting the flare nut, flaring work is carried out.



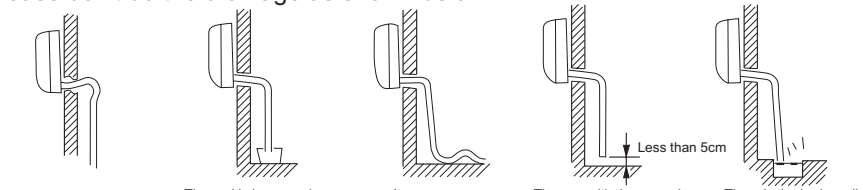
Flare tooling die

	Pipe diameter(ϕ)	Size A(mm)
Liquid side	6.35mm(1/4")	0.8~1.5
Gas side	9.52mm(3/8")	1.0~1.8
Gas side	12.7mm(1/2")	1.2~2.0

Correct	Incorrect
	 Lean Damage of flare Crack Partial Too outside

3.On Drainage

Please install the drain hose so as to be downward slope without fail.
Please don't do the drainage as shown below.



It becomes high midway. The end is immersed in water. It waves. The gap with the ground is too small There is the bad smell from a ditch

- Please pour water in the drain pan of the indoor unit, and confirm that drainage is carried out surely to outdoor.
- In case that the attached drain hose is in a room, please apply heat insulation to it without fail.

Check for Installation and Test Run

- Please kindly explain to our customers how to operate through the instruction manual.

Check Items for Test Run

☐ Put check mark ✓ in boxes

☐ Gas leak from pipe connecting?
☐ Heat insulation of pipe connecting?
☐ Are the connecting wirings of indoor and outdoor firmly inserted to the terminal block?
☐ Is the connecting wiring of indoor and outdoor firmly fixed?
☐ Is drainage securely carried out?
☐ Is the earth line securely connected?
☐ Is the indoor unit securely fixed?
☐ Is power source voltage abided by the code?
☐ Is there any noise?
☐ Is the lamp normally lighting?
☐ Are cooling and heating (when in heat pump) performed normally?
☐ Is the operation of room temperature regulator normal?

O_2-refresh system installation

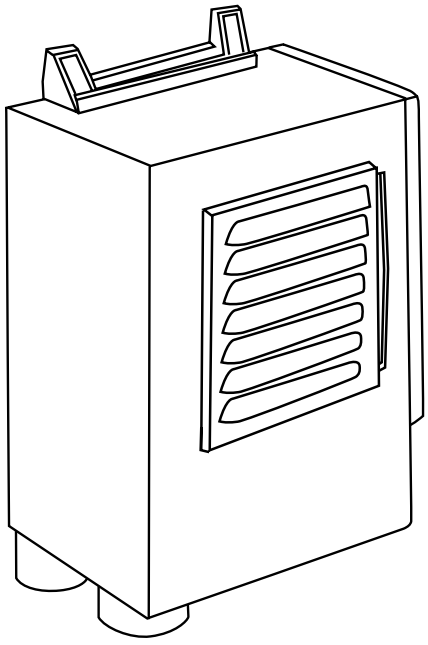
Welcome to use O_2-Refresh air conditioner,

This installation manual introduces deal the installation steps of O_2-Refresh system and the cushions. For correctly installing and using O_2-refresh system,please read this manual carefully before installation.

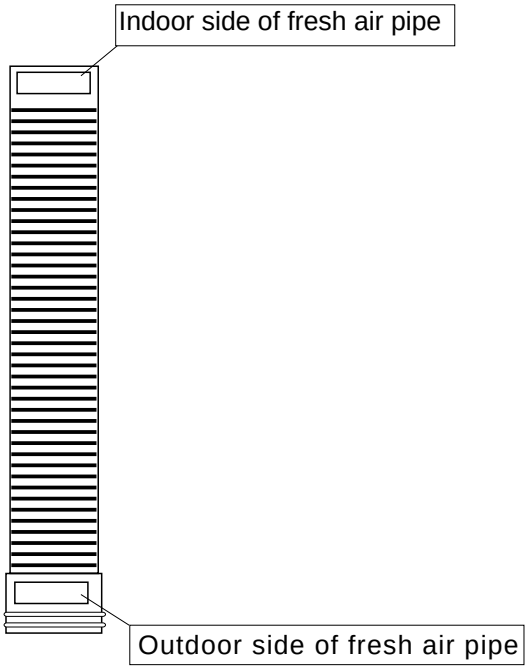
packing list:

No.	Name	Amount
1	Full energy recovery exchanger	1
2	Fresh air pipe	1
3	Bend connector for room air pipe	1
4	Room air pipe	1
5	Screws	3
6	String fastener	2

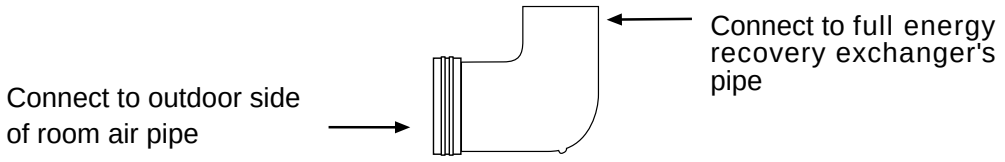
1.Full energy recovery exchanger



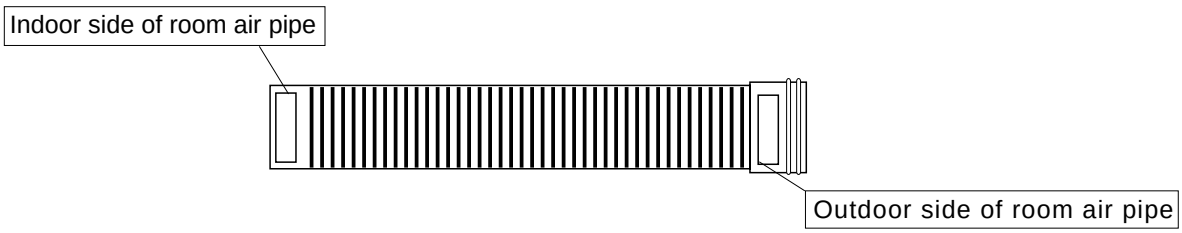
2.Fresh air pipe



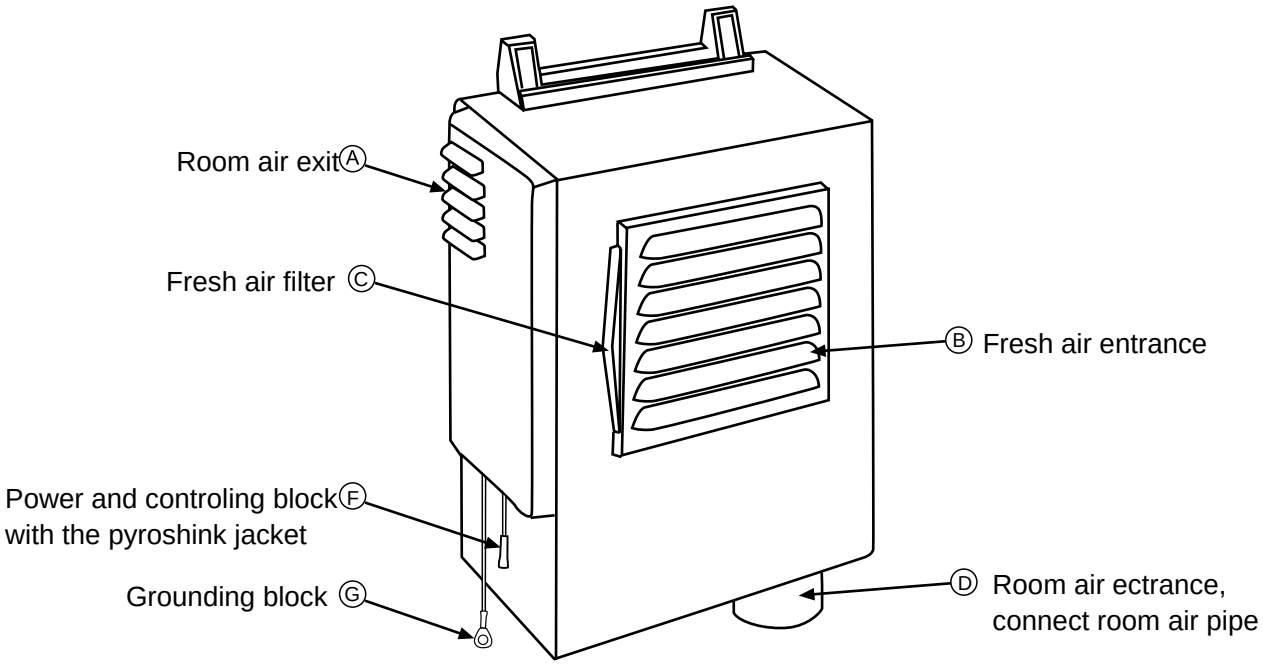
3.Bend connector

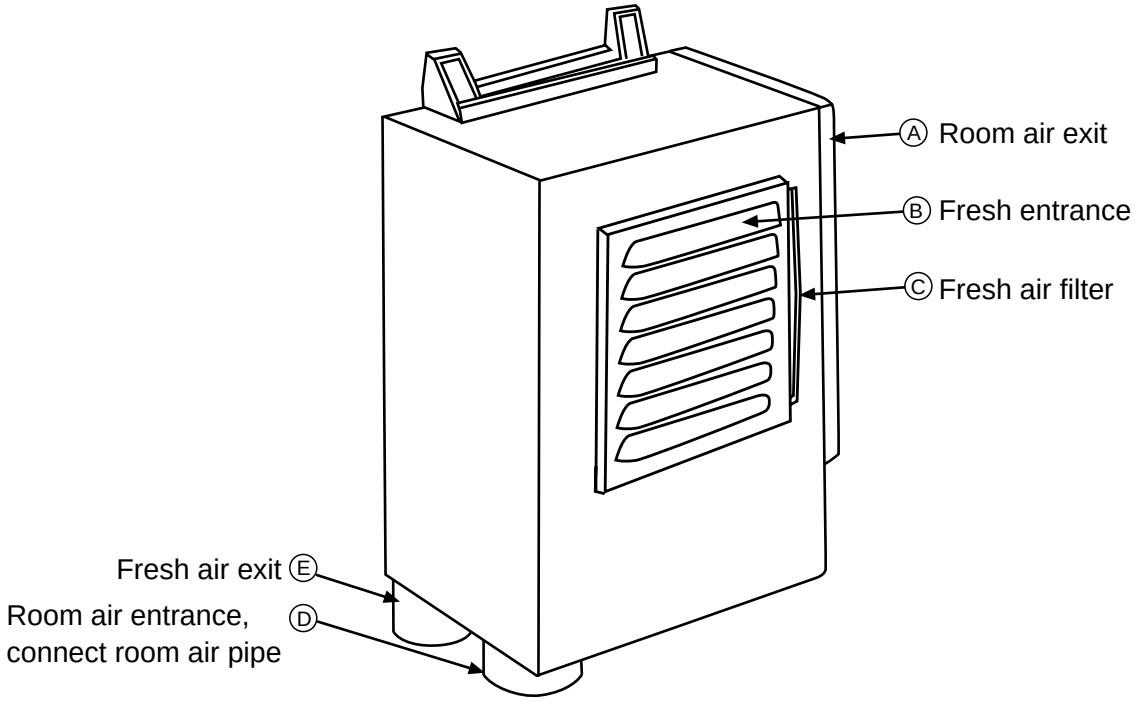


4.Room air pipe



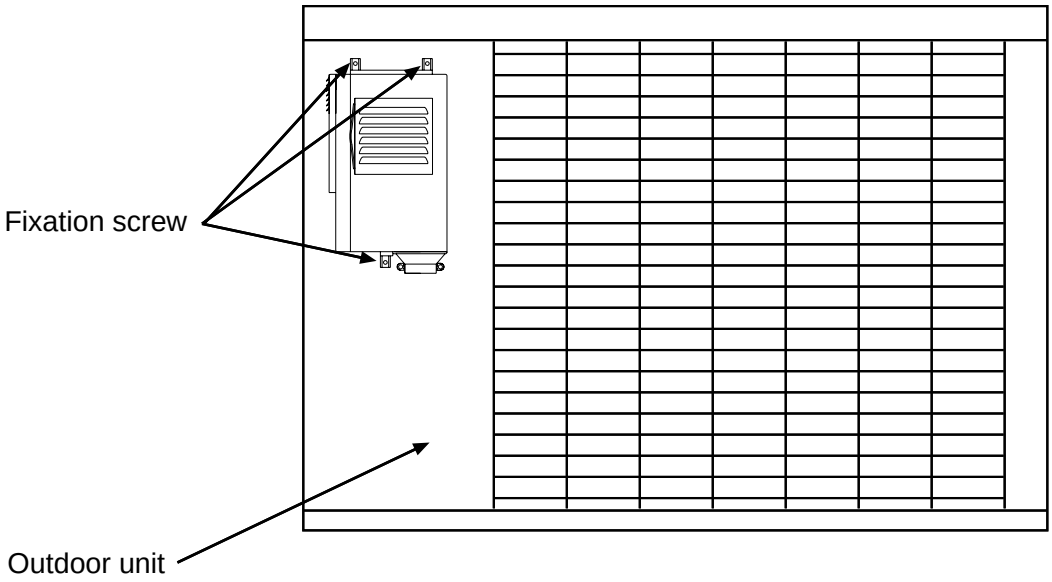
Full energy recovery exchanger





Installation manual

1.The main unit installation



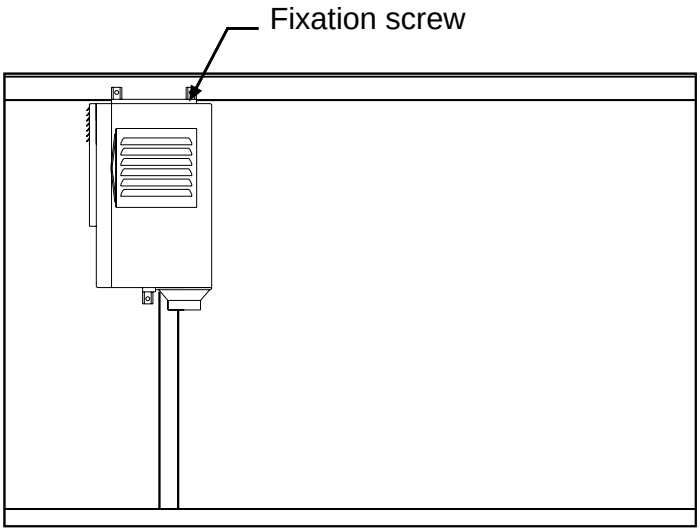
According to the drawing, install the full energy recovery exchanger on the corresponding place of the outdoor unit, and fix the fittings on the outdoor unit cover with the screws.

2.Small size outdoor unit installation sketch

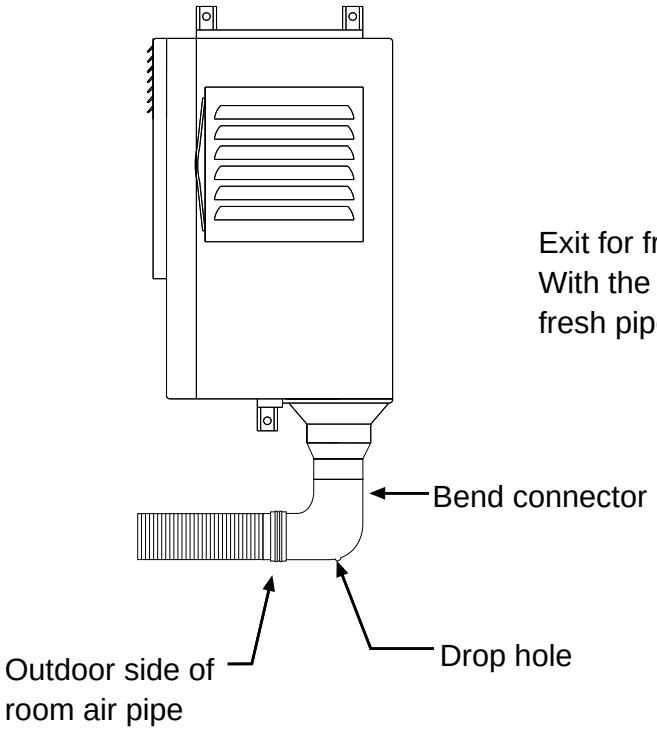
According to this sketch, follow this step when install the full energy recovery exchanger on the small out door unit:

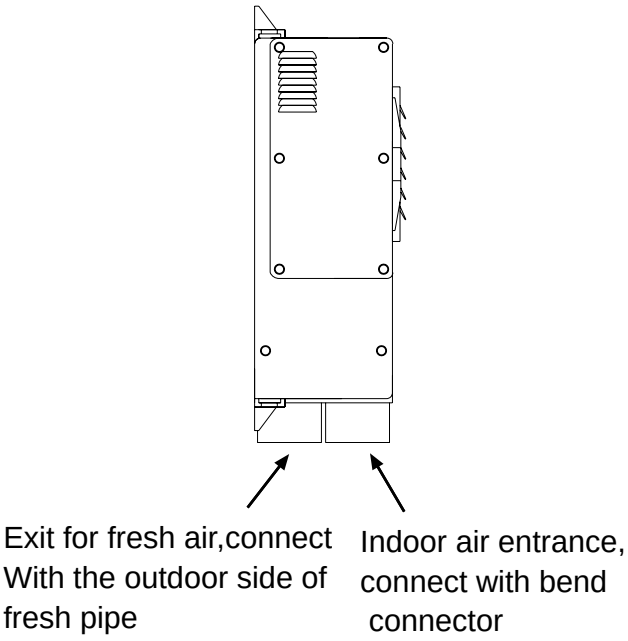
1. Unscrew the fixation screws in outdoor unit cover

2. Fix the full energy recovery exchanger on the cover of outdoor unit with the appended screws.



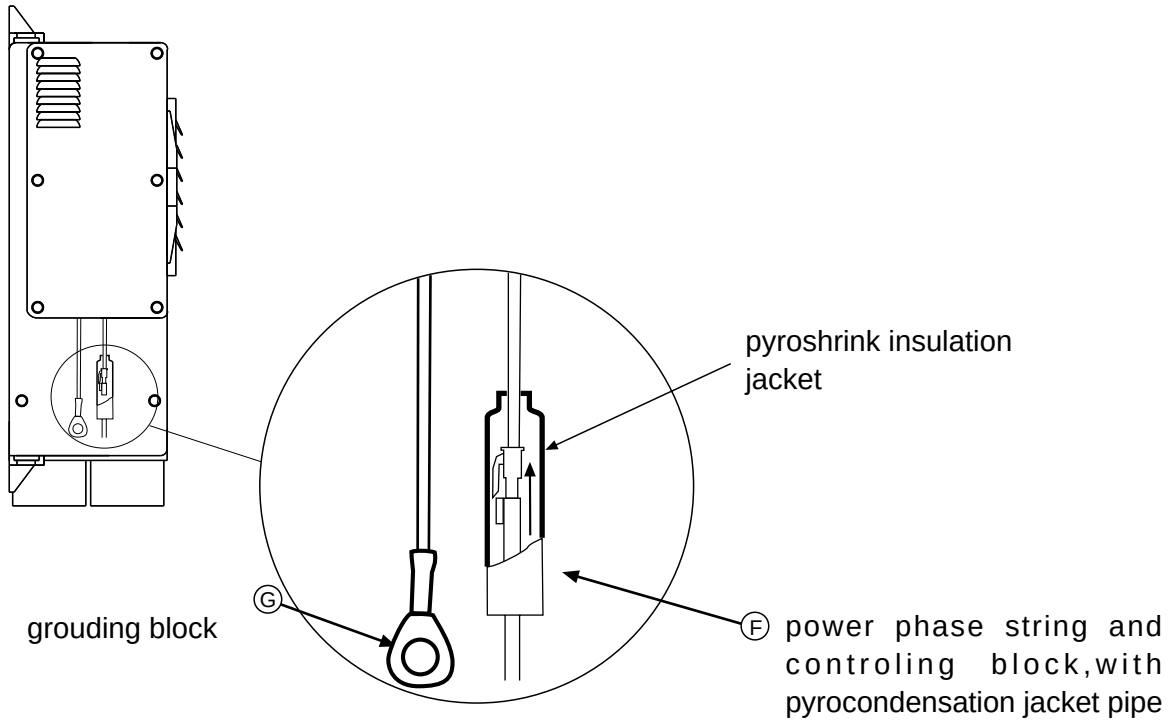
3. Pipeline installation





3.power block installation

There are two terminal blocks F and G on the full energy recovery exchanger. F block is power phase string and controlling block, which connects with power string. G block is the ground-connecting block, which connects the zero string end in the terminal box.



caution:

There is anti-water jacket(pyroshrink pipe) on the block connector of the controling string and the power phase string. Please confirm whether it is fastened after connecting.

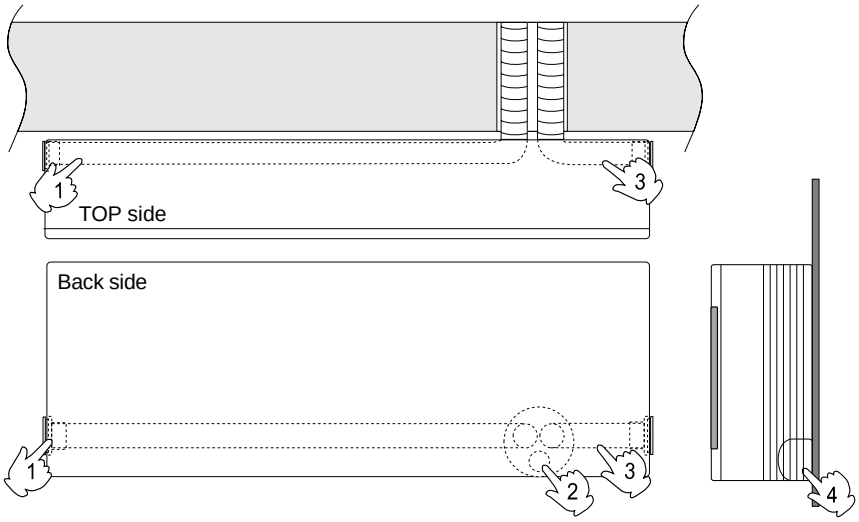
Installation of indoor unit

As intallation of the fresh air system,we have two choices. One is installing the connecting pipe from back, another is from side,both of this two choices should finished the connection before fixing on the wall.

A

Install the connecting pipe from back of the indoor unit:

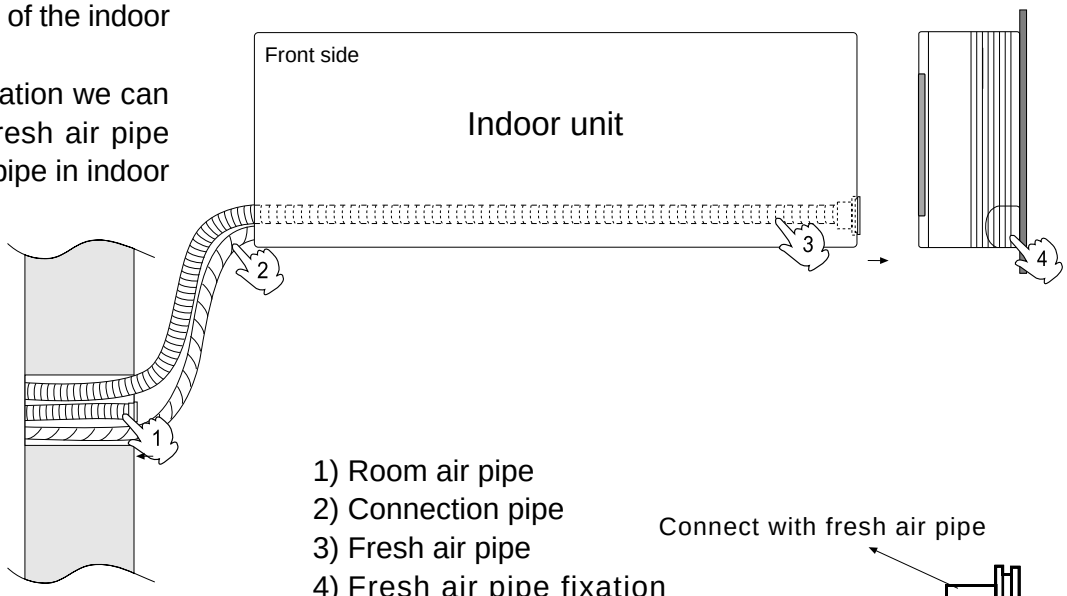
In this situation we can fix both the fresh air pipe and room air pipe in indoor unit.



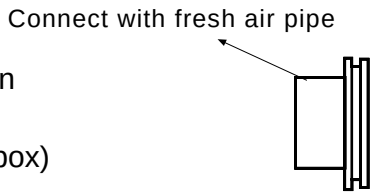
B

Install the connecting pipe from side of the indoor unit:

In this situation we can fix both the fresh air pipe and room air pipe in indoor unit.



1) Room air pipe
2) Connection pipe
3) Fresh air pipe
4) Fresh air pipe fixation kit for indoor unit (packed in indoor unit box)



9. Removal Procedure

Indoor unit

9.1 Removal of Air Filter

Procedure

Warning Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

Step	Procedure	Points
1. Features		
2. Remove the air filters.		
1 Hold the front panel by the tabs on the both sides and lift it until it stops with a click.		
2 Keep the front panel open with the support plate.		

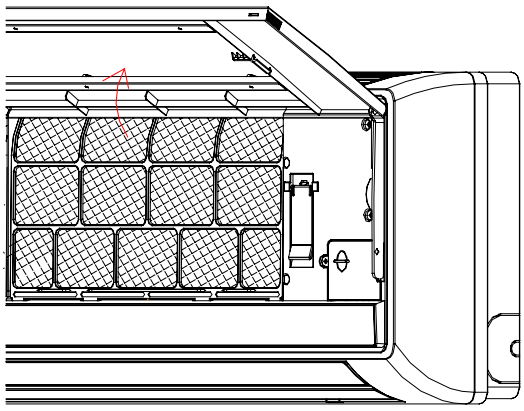
Step	Procedure		Points
3	Lift an air filter upwards slightly and then pull it out downwards.		■ Insert the air filters along grooves when installing. ■ When installing, insert 2 hooks of the air filter completely.
3. Remove the air-purifying filter.			■ The right and left air-purifying filters are interchangeable.
1	Titanium Apatite Photo-catalytic Air-purifying Filter is fixed on the rear of the air filter.		
2	Bend the air filter to release the protrusions and remove the Titanium Apatite Photocatalytic Air-Purifying filter.		

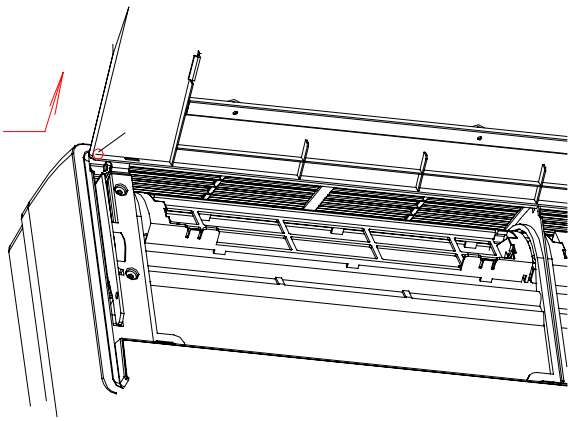
9.2 Removal of Front Grille

Procedure

Warning Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

Step	Procedure	Points
1. Remove the front panel.		
1	Open the front panel to the horizontal position. Release the both sides pivots and remove the front panel.	■ Start the removal procedure of front grille when the panels are closed. ■ Slide the front panel side to side to release each axis. ■ When assembling, align the right and left axes with grooves in turn and insert them to the end.





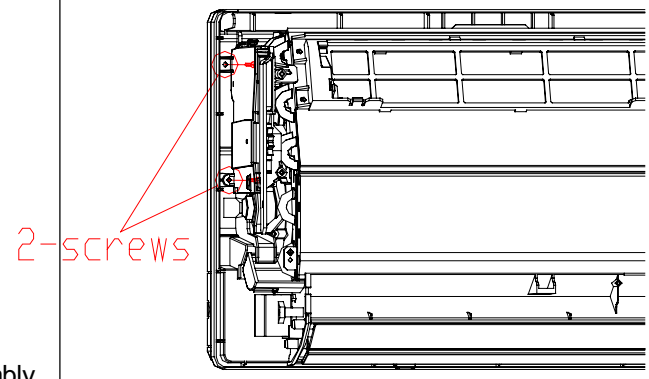
Step	Procedure	Points
2	Release the marked four hooks.  	
3	Loosen the marked four screws 	
4	Pull the front grille out horizontally and remove it. 	■ When assembling, install the front grille horizontally so as not to stuff the flap inside. ■ When assembling, make sure the three hooks are caught properly.

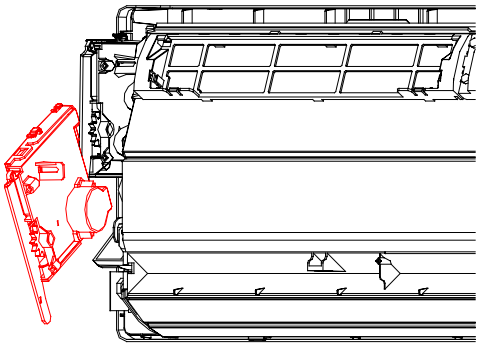
9.3 Removal of Assembly of Front Panel Mechanism

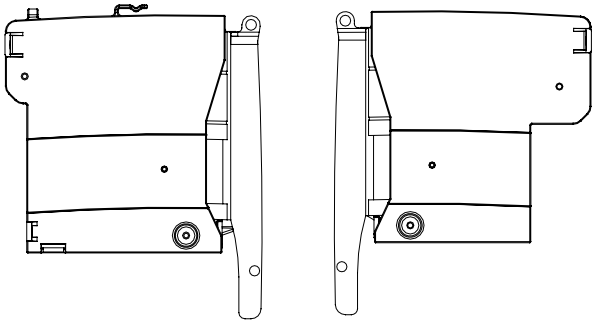
Procedure

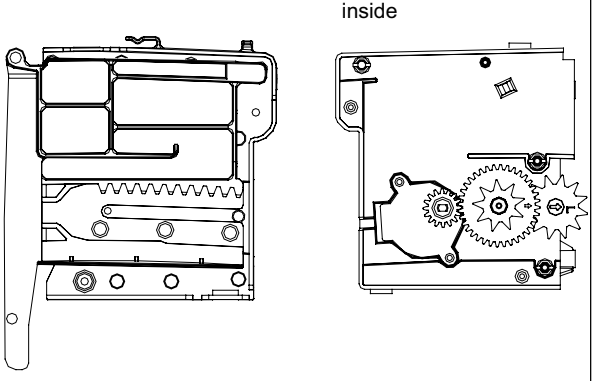
Warning Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

Step	Procedure	Points
■ Remove the front grille.		
1. Remove the assembly of front panel mechanism.		
1 The back of the front grilles		
2 Loosen the 2 screws of the assembly (left).		
3 Remove the assembly.		■ When assembling, insert the lower rack plate first.
4 Lift the shaft and pull it out to the rightward.		■ Be careful so as not to lose the drive gear. 
Step	Procedure	Points
5	Loosen the 2 screws of the assembly (right).	
6	Remove the assembly.	■ When assembling, insert the lower rack plate first.









Step	Procedure	Points
2. Remove the lower rack plate.		
1 Loosen the 2 screws of the left assembly cover.		
2 Hold the assembly horizontally and release the upper hook.	left 	■ When you demand small parts like cogs and rollers, order a set of assembly.
3 Keep the assembly horizontally and undo the hooks on side and lower sides.		
4 Remove the running gear.	inside without cover 	■ Be careful so as not to lose the rollers and the cogs. ■ When you demand small parts like cogs and rollers, order a set of assembly.

9.4 Removal of Horizontal Blade

Procedure

Warning Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

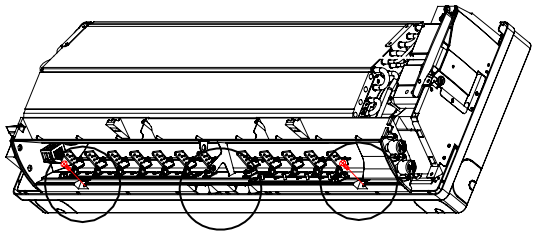
Step	Procedure	Points
1. Remove the horizontal blade.		■ The horizontal blade is single.
1 Release the center pivot.	  	■ Installation procedure 1. Since key pattern hook is provided, rotate the blade and fit it to the left pivot first. 2. Fit the blade to the right pivot. 3. Fit the blade to the center pivot.
2 Bend the horizontal blade slightly and remove it.		

Step	Procedure	Points
2. Remove the swing motor.		■ The swing motor for horizontal blade is on the left side.
1 Pull out and remove the swing motor connector.		
2 Loosen the screw.		
3 Pull toward left and remove the swing motor.	 (R5042)	■ The axis has a keyhole.

9.5 Removal of Drain pan

Procedure

Warning Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

Step	Procedure	Points
■ Remove the front grille. ■ Remove the assembly of the reduction motor. 1. Remove the Drain pan.		
1	Loosen the marked screws under the screw covers 	
		


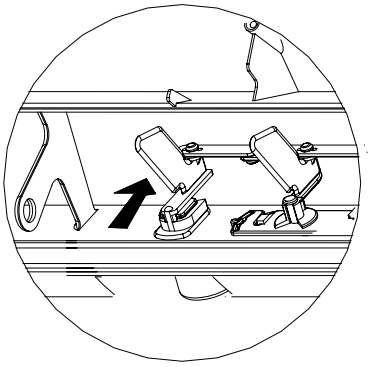
2	Lift up the lower part of the grille to release the hook on the upper backside. 	
	Rotate the upper part of the grille to release the hook on the lower back-side. Pull out the grille. 	

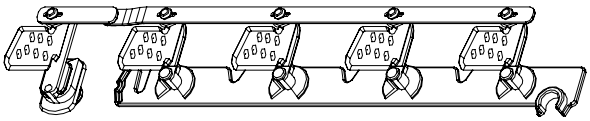
9.6 Removal of Vertical Blades and Swing Motor

Procedure

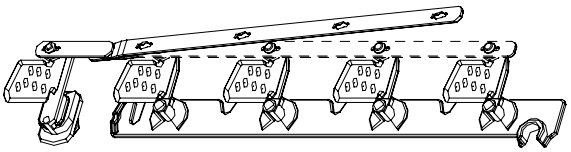
Warning Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

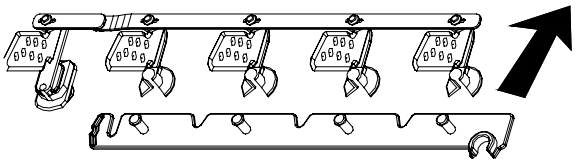
Step	Procedure	Points
■ Remove the assembly of the outlet grille.		
1. Remove the vertical blades.		
1 Push the hooks on the back of the vertical blades and remove.						

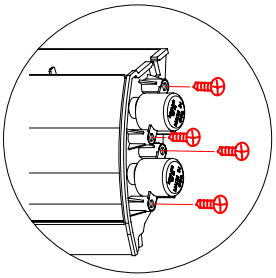


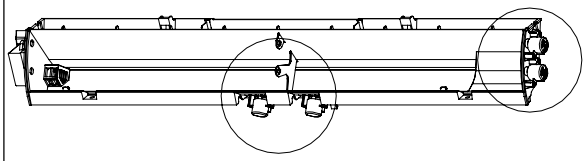


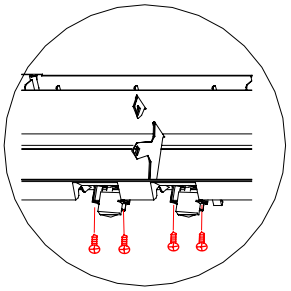
Step	Procedure	Points
2	Removal of the vertical blades	
3	Removal of the blade motor.	

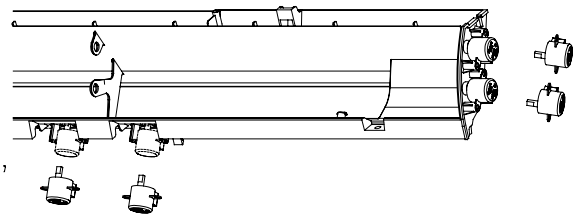










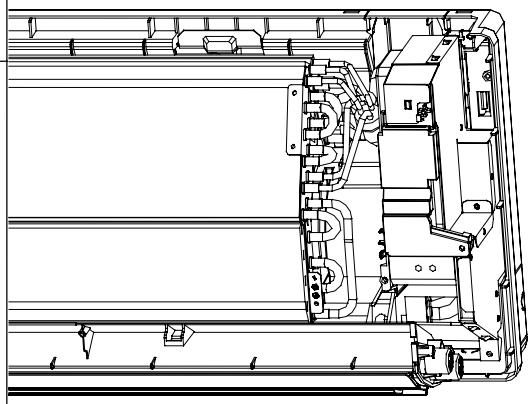


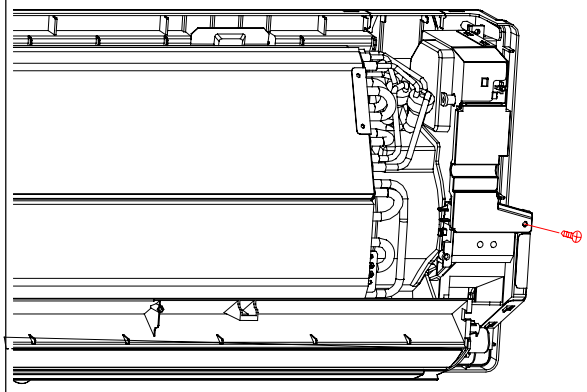
9.7 Removal of Electrical Box

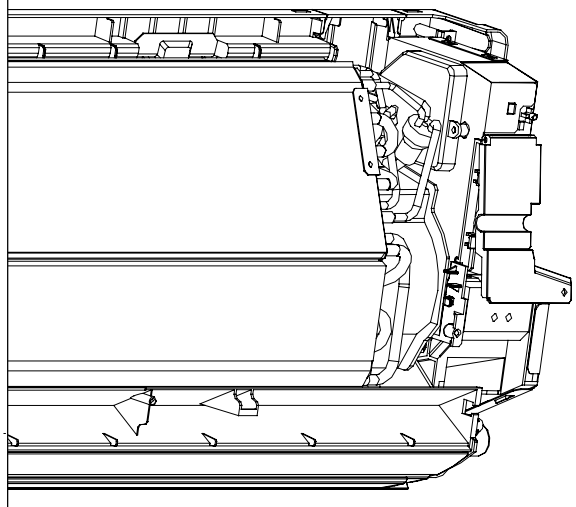
Procedure

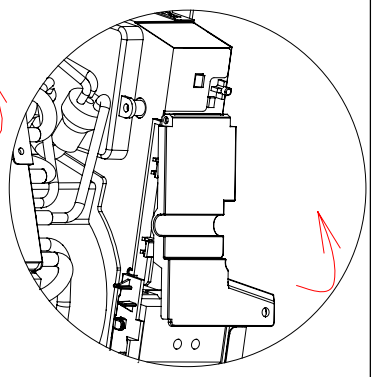
Warning Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

Step	Procedure	Points
■ Remove the front grille.		■ Discharge the static electricity from your body before touching the electrical parts like signal receiver PCB. It may cause malfunction of PCB.
1. Remove the electrical box.		
1	Loosen the screw of the drip proof plate.	
2	Lift and remove the drip proof plate.	■ When assembling, insert the left hook of the drip proof plate into the hem plate of the heat exchanger.









Step	Procedure		Points
3	Push the hook on the right side and remove the electrical box cover.	 (R5058)	
4	Layout of the wiring		
5	Loosen the screw of the earth.		

Step	Procedure		Points
6	Disconnect the connector for the swing motors for horizontal and vertical blades (S41).		■ The harnesses for the horizontal swing motor and the vertical swing motor are united.
7	Release the harness from the hook.		
8	Disconnect the connector for the fan motor (S1).		
9	Release the harness from the hook.		

Step	Procedure		Points
10	Disconnect the connector for the reduction motor (front panel mechanism) (S49).		
11	Release the harness from the hook.		
12	Release the heat exchanger thermistor.		■ Pay attention so as not to lose the clip. 13	Release the thermistor lead wire from the hook.		■ When reassembling, hang the excessive lead wire of the heat exchanger thermistor on the hook.

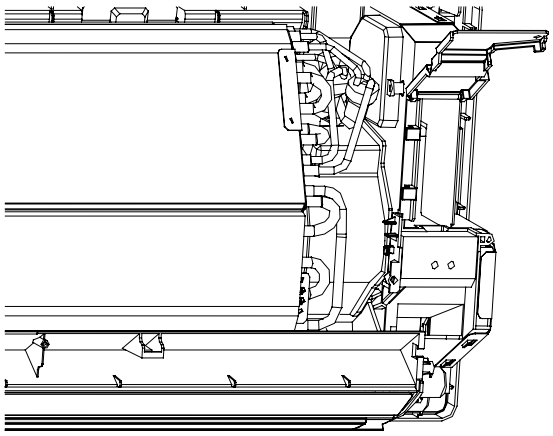
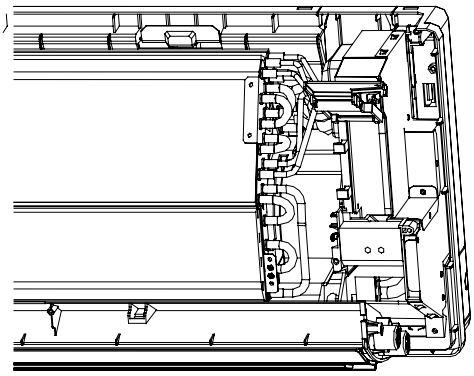
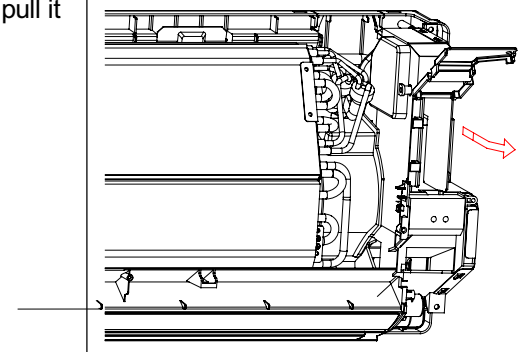
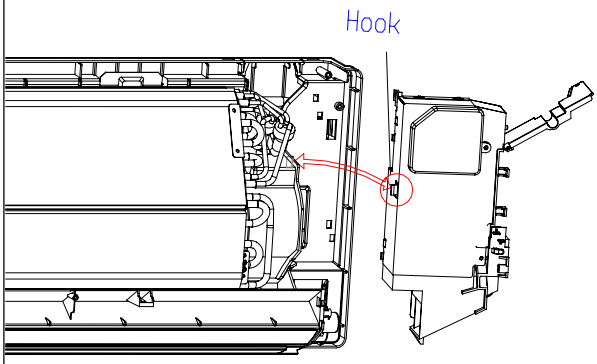
Step	Procedure	Points
14	Layout of the lead wire for the heat exchanger thermistor	
15	Loosen the screw of the electrical box.	
16	Tilt the front part of the electrical box to the right slightly and pull it out.	









9.8 Removal of Heat Exchanger

Procedure

Warning Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

Step	Procedure		Points
			■ You can detach the indoor unit without removing the assembly of the outlet grille.
1	Loosen the screws fixed to the installation plate.		Caution If gas leaks, repair the spot of leaking, then collect all refrigerant from the unit. After conducting vacuum drying, recharge proper amount of refrigerant.
2	Loosen the marked hooks		Caution Do not contaminate any gas (including air) other than the specified refrigerant (R410A), into refrigerant cycle. (Contaminating of air or other gas causes abnormal high pressure in refrigerating cycle, and this results in pipe breakage or personal injuries.)
3	Loosen the marked screws and remove mounting plate	  	■ Pay attention so that the residual water in the drain will not make the floor wet. ■ In case that a drain hose is buried inside a wall, remove it after the drain hose in the wall is pulled out. ■ Use two wrenches to disconnect pipes. ■ When disconnecting pipes, cover every nozzle with caps so as not to let dust and moisture in.

Step	Procedure	Points
1	Release the hooks	2	Release the hook from the back side. Lift up the lower part of the fixture plate and remove it.	  6	Remove the heat exchanger	
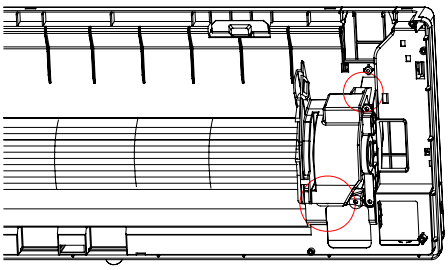
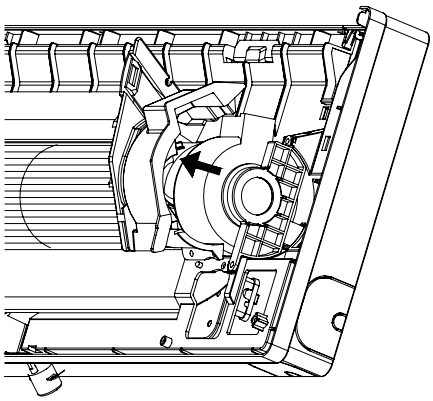
9.9 Removal of Fan Rotor and Fan Motor

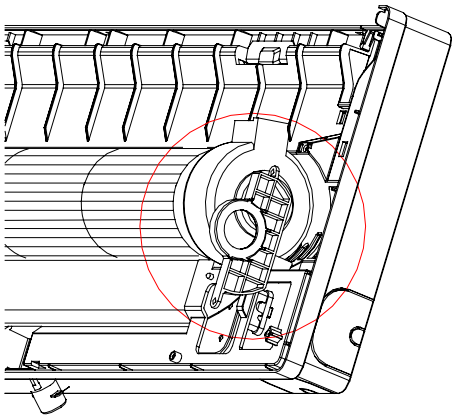
Procedure

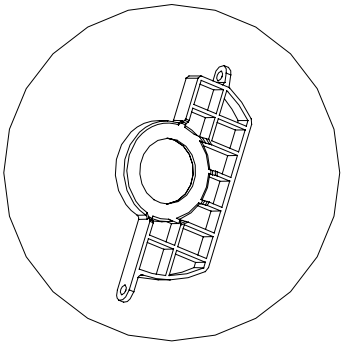
Warning Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

Step	Procedure	Points
1. Remove the right side plate.		
1	Loosen the 2 screws.	
2	Remove the right side plate.	

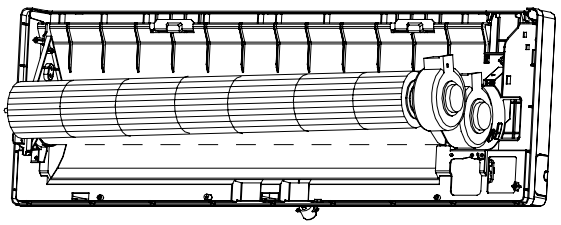


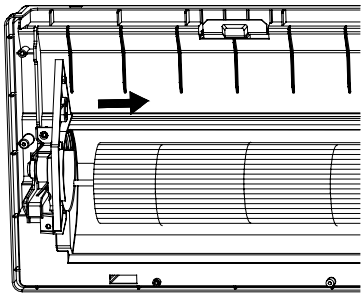


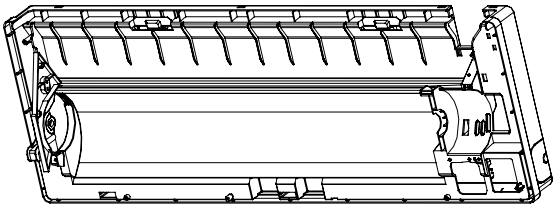


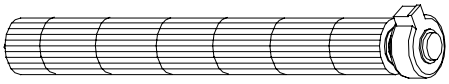


Step	Procedure	Points
3. Remove the bearing.		
1	Lift up the right part of the fan rotor and motor, and slide them to the rightward to remove.	

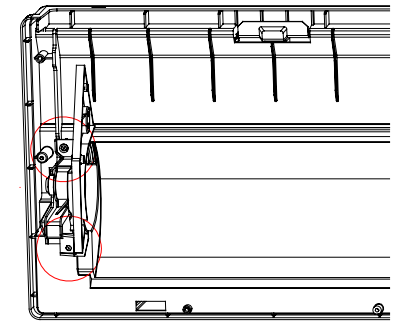


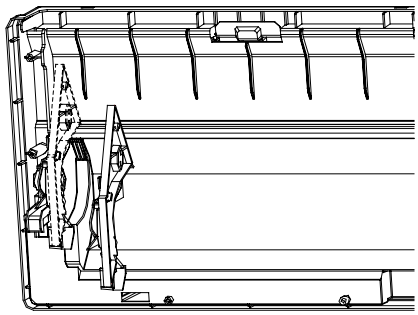


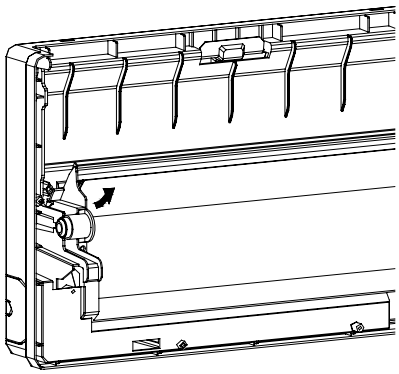


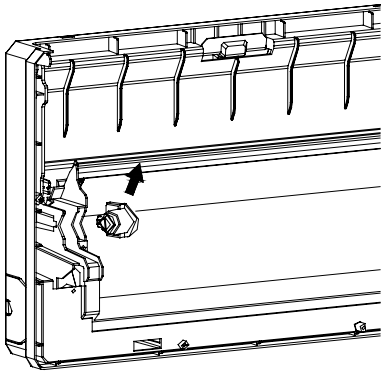


Step	Procedure	Points
2	Loosen the marked screws and remove the left plate	
3	Remove the bearing	









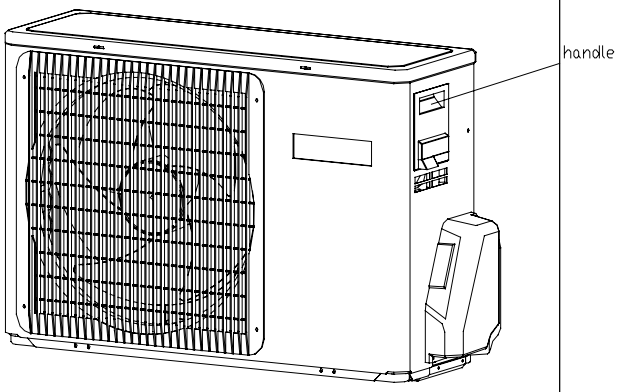
Outdoor unit

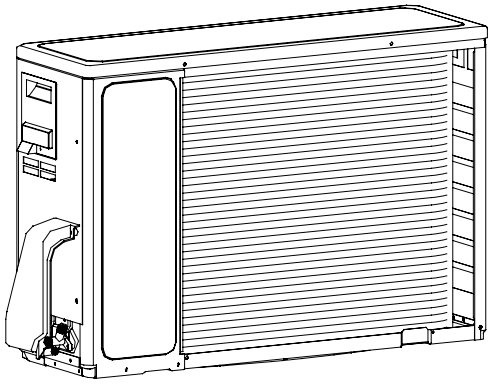
9.10 Removal of Outdoor panel

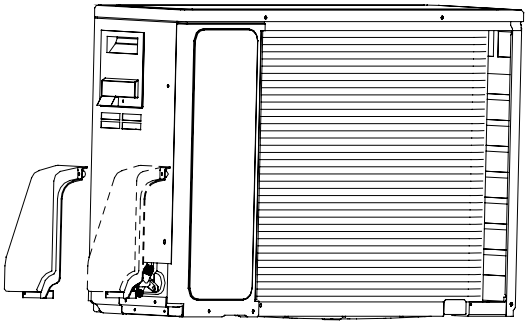
Procedure

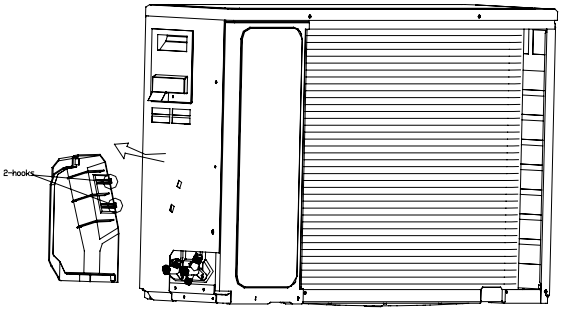
Warning Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

Step	Procedure	Points
1. Features		
1	Loosen the screw of the stop valve cover. Pull down the stop valve cover and remove it.	■ Be careful not to cut your finger by the fins of the heat exchanger. ■ The stop valve cover is united with the shelter. ■ When assembling, make sure to fit the 5 hooks.

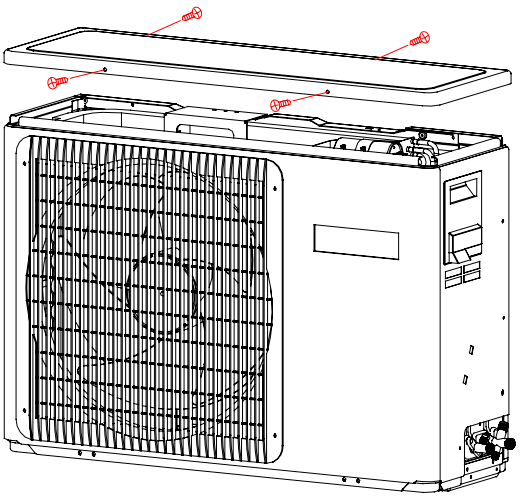


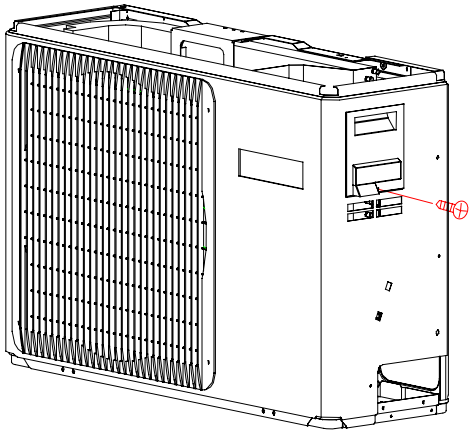


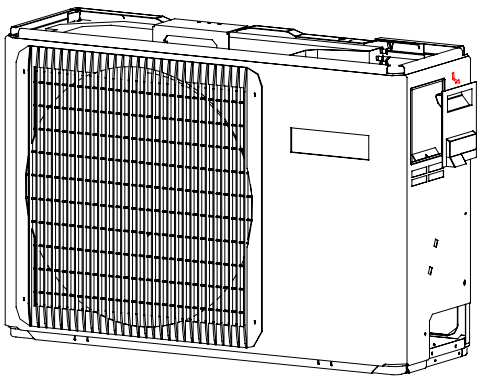




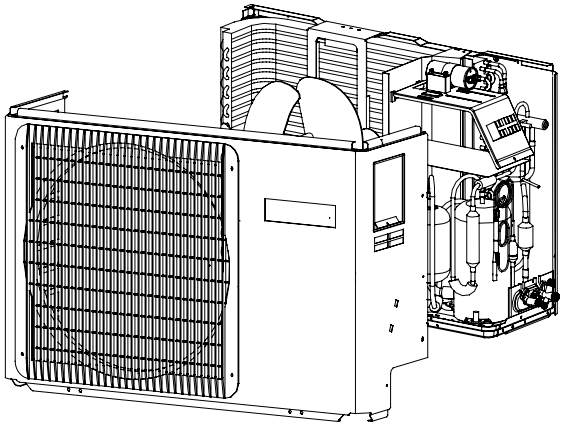
Step	Procedure	Points
2. Remove the panels.		
1	Loosen the 4 screws and lift the top panel	
2	Loosen the service cover screw and remove the service cover.	

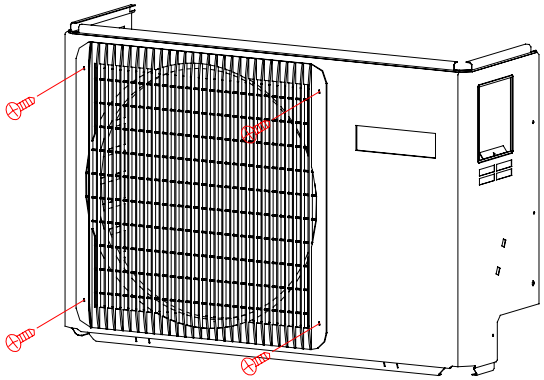




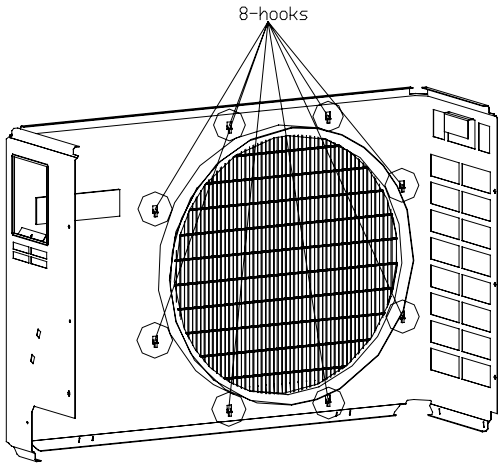


Step	Procedure	Points
3	Loosen the screws of the panel.   	

Step	Procedure	Points
4	Pull and remove the front panel.	
		


3.	Remove the outlet grille	
1	Unscrew the four marked screws	
		


2	Push the eight hooks on the inside back of front panel,then pull the outlet grille off.	
		



9.11 Removal of Electrical Box

Procedure

Warning Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

Step	Procedue		Points
1	Remove the fixing screws Then lift the electrical box	  	

9.12 Removal of Fan Rotor and Fan Motor

Procedure

Warning Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

Step	Procedure		Points
1	Loosen the fixing screw and remove the fan	  	 ■ Put the lead wire through the back of the motor when assembling. (so as not to be entangled with the propeller fan)

9.13 Removal of fan motor bracket and partition

Procedure

Warning Be sure to wait 10 minutes or mo
before disassembling work.

Step	Procedure	Points
1	Loosen the fixing screws and lift the fan motor bracket .   	

Step	Procedure	Points
3	Loosen the 2 screws 	
4	The partition plate has a hook on the lower side.Lift and pull the partition plate to remove. 	■ When assembling ,fit the lower hook into the bottom frame .
5	Loosen the marked fixing screws 	

9.14 Removal of compressor and heat exchanger

Procedure

Warning Be sure to wait 10 minutes or more after tu
before disassembling work.

Step	Procedure	Points
1	Loosen the marked screw . 	
2	Cut down the conecting pipe and pull out the compressor and remove the valve bracket .  	

Step	Procedure	Points
3	Loosen the marked fixing screw . 	
4	Loosen the fixing hook and remove the heat exchanger .
